That-a-Way was a quiet little outpost on the frontier West in the 1840's . . . caught in limbo between the flourishing East and the bright promise of the Far West.

It was, that is, until GOLD was found and INFLATION followed. The saga of *That-a-Way* is told in a 15-minute parable in color and sound. What happened to the town is what *can* happen to all of us in the 60's when prices, wages *and taxes* begin that steep climb that leads to a ruinous end.

Earl Klein's Animation, Inc., created this film-fable of a modern problem for outright sale to groups and organizations to help fight the perils of inflation. It's right *good!*

Significant Questions for Management

A Basis for Evaluating Your Future in Programmed Learning

• by A. G. Clark, Director, Applied Communication Systems

THE BUSINESSMAN and industrial manager who has observed the current and growing rash of articles, publications and symposiums concerning programmed learning and teaching machines should have three significant questions:

- What is it about and what is the *basis* for such burgeoning interest and activity?
- What does it mean to *me* and *my company and its operations?*
- Finally, what should I *do* about it, and *when*, and *how?*

The phenomenal burgeoning of interest and activity in programmed learning during the past 18 months is evidence of the recognition that a great need exists to accelerate the traditional processes of training and education.

The programming technique for organizing a body of knowledge is based on a science of behavioral research with over 20 years of laboratory experimentation behind it.

Experiments in the Electronic Field

In the past eight years, segments of the electronics industry (faced with the need for training unskilled workers to meet the accelerated time required for a constantly increasing body of complex tasks) have experimented with *self-paced audio-visual techniques*. Such methods are based on the presentation of an audio-visual stimulus (instruction or question) followed by doing, and answering which in turn produces a reinforcement (seeing result/comparing with correct result).

During the past three years this industrial implementation has grown. The results have been most encouraging. Conservative figures show a 45% reduction in learning time for complex tasks. When used continuously on complex tasks of long duration, a 50% increase in productivity has been realized, along with a 90% reduction in errors that had previously resulted in expensive rejection in work passing to inspection and quality control.

Below: *portable ACS Audio-Visual Unit is desk typewriter size; weighs under 19 lbs.*

In the military services, research on improved A-V training techniques and the development of lesson planning dates back to World War I. For example, the U. S. Naval Training Devices Center at Port Washington, New York, has experimented with auto-self-instructional equipment for more than 10 years.

Schools Study the Teaching Machine

In educational systems, investigation and research are accelerating rapidly and several reports and bibliographies have been prepared. Large-scale experiments in grade and high schools have been conducted in eastern schools. In some cases, controlled experiments have been conducted in order to compare the techniques of conventional teaching, programmed texts, and teaching-machine automated programs.

It should be noted that films, slide-tape lectures and television have the main merit in enlarging the classroom, permitting more students to view select (difficult to otherwise disseminate) media. They do not, however, have as their objective an improvement in the teaching technique.

They Have These Features in Common

Teaching machines will range from programmed texts through audio-visual machines and sophisticated computer-controlled machines in which the stimulus is "feedback controlled" by the constructed responses of the student. All have as their objective these common features:

(a) The material is carefully planned, organized and integrated with psychological motivation concepts; and, of most importance, it is *tested*, revised, and *tested* again and again to approach asymptotically an ideal goal which is based on an analysis of the job or educating problem. Such an analysis takes into consideration initial behavior (pre-conditioning) and the target terminal behavior desired.

(b) The student or trainee works alone and at his or her *own pace*.

(c) The attention of the individual student is captured by the need to respond at each step before proceeding with the next.

(d) A knowledge of the correct answer is given immediately after each step to allow reinforcement (or reward) before proceeding with the next step or "frame."

As a result of this programming effort, the material then becomes *instructive* rather than *descriptive* as are conventional illustrated lectures and training films, and slide tape presentations which inform and inspire rather than teach.

Supply & Demand Met at Crossroads

As to the reasons for this sudden mu rrooming of activity, it can be viewed as t result of supply and demand. The thr streams of research described above as indu try, military, and educational systems in t past year have simultaneously reached t stage of reporting results. The demand h been evident in the great need to accelera training and education in all areas.

The rapid evolution of technology in fields has caused bodies of knowledge to e pand. In addition to the U. S. population e plosion, we have the responsibility to suppl ment our aid to the uncommitted, underpri leged areas of the world with education a training. Finally, there is the need to re-tra our people who have been adversely affect by industrial geographic shifts in our changi technology.

What Can the Business Man Do?

The second question is "what does it me to the business and industrial executive?"

In reply, he should look upon programm learning as a new tool. Its meaning lies in h estimate of the importance and needs of trai ing for his employees and his business. He also a member of a community whose schoo should be aware of what is occurring. He also a free world citizen, and therefore shou ask himself "how important will be the role disseminating knowledge in keeping our wor free?"

Finally, we come to the question of wh *action* he should plan. As with any tool, should first become familiar with its properti and capability. Much has been written a more is becoming available daily. In this artic we have only attempted to hit the highligh but hope it will prompt the reader to sear further.

Look to Your Business and Its Needs

This is an exciting evolution and its potenti should trigger the imagination and a thirst f information about it.

Armed with the knowledge of what pr grammed teaching and teaching machines c do, he should look to his own business.

What are his present employee training a tivities? Are they adequate?

Is complex information being communicate effectively? Is turnover and technique preserv tion a problem?

Could he afford to allow his people to l

ACS-designed "Total Environment Work Station" with its Audio-Visual Unit (center).

pgraded to perform a better job if they were ained in a more efficient manner?

These are the questions that should be sked. There are many more that relate to arketing, servicing of products and dissemiating knowledge of new products which are oming on the market at an enormous rate. mployee indoctrination, office routine, manuacturing processes and quality control are a w of the functions that will be benefited.

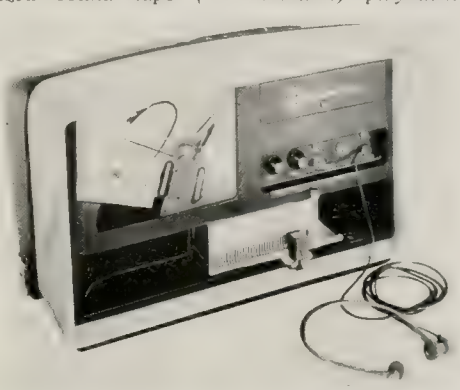
As a community member, the industrialist nd businessman should ask similar questions bout his local schools and their approach to hese evolving challenges in learning, *but he ust observe far more patience with the anwers he receives.*

Long Period of Depth Research Ahead

To anyone who has examined the problem f programming, the vast difference in diffiulty between "how to do it" and education verbal or symbolic logic) media will be recogized.

It should also be recognized that *several ears will be needed to evaluate a complete ourse of programmed media and statistically o evaluate the subtleties of transfer and retenion.*

He must also remember that industry can valuate a capital investment that reduces raining costs or improves productivity and alculate the savings and the resulting payack rate. It is such measurable results that notivate the Manager, but this cannot be directly translated to our schools without far nore research.



The integration into schools will therefore e understandably slow and there will for a ime continue to be the negative reactions to *teaching machines."* This will dissolve when he costs can be evaluated. A good example is he storage density of books versus micro-film nd magnetic tapes. The importance of good pictures (and imaginative illustrations in informative color) will replace drab paper frames that use line after line of verbal illustrations that can pall upon the student.

Good Teacher Must Be Good Manager

Lastly, there will be the realization that a *good teacher* must become a *good manager.* Such a teacher will do less lecturing and more guiding and counseling. He will then be able to afford the previously unavailable but essential time to give special aid to both apt and slow pupils. Such a teacher will prescribe the best material for each student and have the time to plan such prescriptions and integrate the best tools, from books to audio-visual aids and teaching machines.

Such a teacher will spend more time, therefore, on the principal activities of a good manager—that is *planning, organizing, integrating,* and *measuring* results which can be used to control a continual evolving plan for each student at his individual and best learning pace.

Below: *Audio-Visual Unit has 35mm automatic 36-frame slide viewer and synchronized sound tape (110 minutes) playback.*

VIEWPOINTS:

The Teaching Machine and Programmed Learning for Industry and Education

• A multitude of "hardware" and a shortage of skilled "programmers" is the dilemma faced by those who would use the teaching machine to implant skills or to speed the flow of knowledge in industry or in our fast-growing schools. But results of research are evoking strong interest in this subject; time and thought going into application, from inverted textbooks to the mighty and complex computer. These pages present viewpoints of suppliers and authorities in the field. Subsequent articles will include the experiences of program users. Integration of these techniques with training films will be given special attention. —*OHC*

Right: *girl in the picture uses an ACS unit to assemble complex electronic circuit boards. She did it without prior instruction except in a few of the basic tools.*

A Basic Approach to Programmed Learning

• by R. W. Roop, Vice-President, General Atronics Corporation

VERY FEW businesses are able to find new employees who can step directly into the job. Particularly in large, decentralized organizations selling specialized products or services, training new people is an important and difficult function.

One of the largest casualty insurance companies has a well-established system for training new employees for field service positions. Such people are hired by the local office and exposed to all of the activities carried on there by on-the-job training in each of the departments of the field office.

Correspondence Courses on Insurance

After a little more than a year of this kind of experience, the Education Department in the home office enrolls each new person in a series of correspondence courses, to be completed in about six months. These courses teach the fundamental principles of the insurance business in each of its different departments—liability, automobile, fire, marine. The courses are designed to bring new people to a more or less uniform state of preparation for the next step in their training. Time is assigned during the working day for the correspondence courses, but the field service representative-to-be usually finds his job in the field office is demanding enough so that he spends some of his own time completing the correspondence course.

When the correspondence work is finished, each new person is brought to the home office for a number of weeks to be taught those parts of his job best learned from personal instruction and example. These subjects include salesmanship and human relations, the features and content of specific company policies, how to work with local agents, how to set the right tone in correspondence with agents and customers. After this classroom instruction, the representatives are considered qualified and sent back to their original field offices for permanent assignment.

In spite of the extensive preparation, the home office school often finds that when the trainees arrive, they are inadequately prepared in the fundamentals, so valuable class time has to be spent bringing some people up-to-date instead of going on to the more specialized material. The result is frustration for the school staff and loss of efficiency for the students during the most expensive part of their training—when they are living away from home.

Programmed Learning is Motivated Self-Study

In situations like this, many companies are beginning to find out that learning programs arranged for individual self-instruction can serve a useful role in the overall training plan. One of the principal benefits is that learning programs can stimulate effective study and produce a more uniform state of preparation than other methods even when the students are scattered widely across the country or across the world. Everyone who has dealt with training programs knows that a large spread in background information makes it difficult to teach a class. Well-designed learning programs, used either in the school or by mail, can reduce this problem significantly.

Learning Program a Designed Text

A learning program is a specially designed textbook. As with normal texts, they can be written about almost any kind of subject matter —insurance, drugs, airline operations, retail sales, accounting, new products and so on indefinitely. The special characteristics of learning programs are in their organization, the w the writing is done and in the way a stude uses them.

The Features of Learning Programs

A learning program is always put togeth to teach something specific—it may be an u familiar concept or a procedure or a way solving unexpected problems—but there is a ways a test available to tell the program writ how well he is doing in reaching the objectiv

The writer then makes a very careful ar detailed outline of all the ideas and procedur the student must know to satisfy the objecti of the program. Using the outline, the writ then puts together a sequence of "items" whic are the program. An item or step or frame a statement explaining one point, followed b a question about it, or about points that hav been explained earlier.

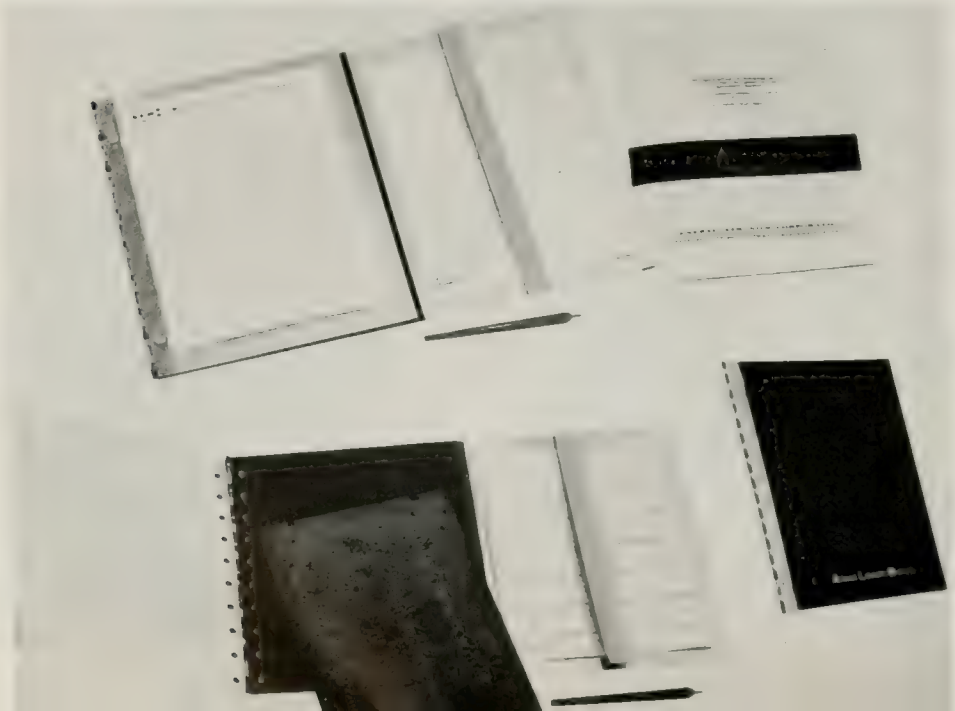
When a first draft of the program has bee written, it is tried on a group who represe the kind of people it will be used with. If th trial group has difficulty answering the que tions or passing the test, the writer knows th his explanation isn't clear, so he tries again.

Socrates' Method of 2,000 Years Ago

The question-and-answer form of teachin used in a learning program is not new. It w invented by Socrates about 2000 years ago. I the last few years, however, psychologists an educators have begun to realize how effecti this method is when used as a medium of ma communication. One of the key points is th the student finds out right away after he an swers the question for each item whether h is right. The quick return of his "score" fo each question gives the student more sense o personal involvement and keeps his intere high. A normal text simply talks at him, bu doesn't ask questions or doesn't tell hi whether his answers are right.

Teaching Machines and Programmed Texts

A variety of arrangements can be used f presenting a learning program to a studen Probably the simplest is a programmed tex book, in which each item is put on a separat page, and the answer to the question is co cealed by printing it on the next page.



If you are concerned about the amount page turning, or whether students will pee simple answer machines such as the Atron TAG (see Figure 1, and caption) can be use with the programmed text. The TAG is a d vice which stores the answers to questions i the text in such a way that they are not easil accessible to the student until after he has s lected his answer choice (for multiple-choi questions) or has written his answer (for wri ten answer questions). Then he can find o whether his answer was correct.

Complex Machines Have Same Objective

Other more complicated machines are al available, all serving more or less the sam purpose—to reveal the answer to the questio after the student has made his own respons and let him discover whether he was righ A summary of these types is illustrated Figure 2.

It is generally agreed, however, that th particular way in which you present a learnir

Figure 1: The Atronic Teaching and Grading System. The TAG System uses a program or text separate from reinforcing and scoring device. TAG has two sides—the left, for multiple-choice answers, consists of a coded answer plate arrangement with punched holes that correspond with answer key for specific program. Entire right side provides surface for write-in answers.

rgram to a student is not nearly as important s he way the program is written.

Kinds of Learning Programs

here are a number of organizations which av prepared learning programs, and as you igt expect there are several different styles ndpoints of view about how to do it.

One school of program writing believes ev- ything a student is expected to learn should e presented in a step-by-step manner, using er small steps. These programs are *self-con- ined*, but they tend to be long (and expensive repare) and may move too slowly for quick uents.

nother method of programming makes use f n existing text book for a reference, and sk leading questions about points explained he reference. These questions are, of use, arranged so the student finds out the g answer after he has made his own. This in of a program is called a *study-guide*. It is uh less expensive to write than a self-con- ined program, but since it depends on an xiing reference book, it may not be as thor- ugly organized.

Adapting to Individual Differences

ill other programs are quite short, and are se to present background information in reparation for a specific class meeting. Instead f arrying the whole load of instruction, such rgrams are only one among many special echniques used by a good classroom instructor. he three types of program are illustrated in igre 3.

nother dimension of program design is he degree of adaptiveness—how much they ccmmodate individual differences between uents. From trials, we know that different uents have quite different rates of learning. arning program is designed for self-study o hat different people will finish a given pro- ra in different time. Between the slowest nthe fastest in a group, there is often more na a three-to-one difference in time. There reundoubtedly similar differences in nearly ngroup about how much of the material to e aught is already familiar. A *straight-line* rgram puts everybody through exactly the ure sequence of small-step items. If some uents already know part of the program, he are expected to go faster, but not to skip nsteps.

How Highly-Branching Programs Work

highly-branching program makes a pre- mary explanation of each point, and then sk a test question. If the student is right in nering the test question, he goes on to the e main point. If not, he is sent off on a branch" which gives extra explanation to the oit he missed.

n *adaptive* program is a mixture of the r ght-line and the highly-branching types. ses small-step explanations of important oits, but uses the test question technique on oits that do not require as thorough cover- ge These three degrees of adaptiveness are ilustrated in Figure 4.

he business use of programmed learning is relatively new development. A few organiza- o have carried through trials of learning

(CONTINUED ON THE FOLLOWING PAGE)

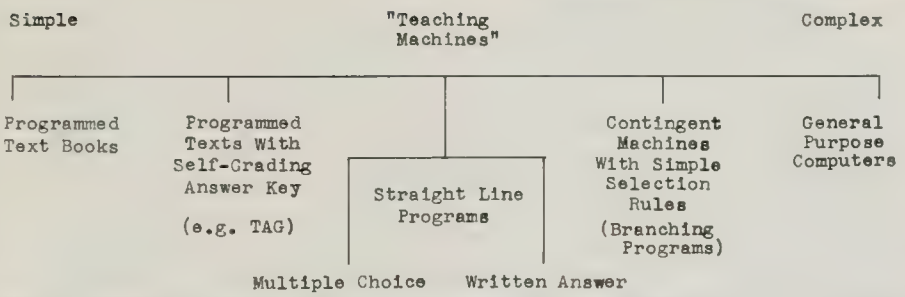


Figure 2: Methods of Presenting Learning Programs. "Teaching Machines" refers to devices which contain programmed material on film or to a card set within the housing, etc. Student views the film through window which conceals correct answer until he has made his response. In a contingent machine, the next item presented to student depends on answer given to the current item.

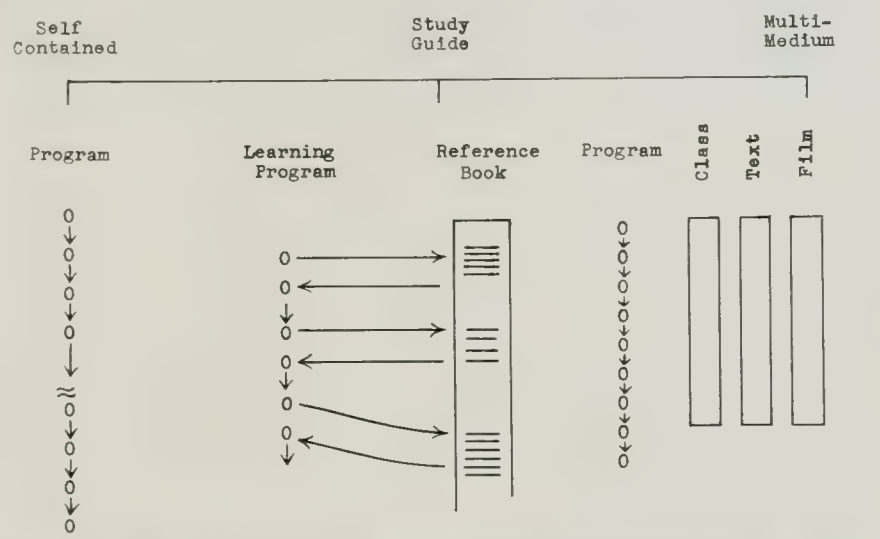

Figure 3: The Self-Sufficiency Scale for Learning Programs. A "Self-Contained" program contains all the material in the course. A Study Guide utilizes a reference text, asking leading questions about the text material. A Multi-Medium program utilizes several devices which instructors may use.

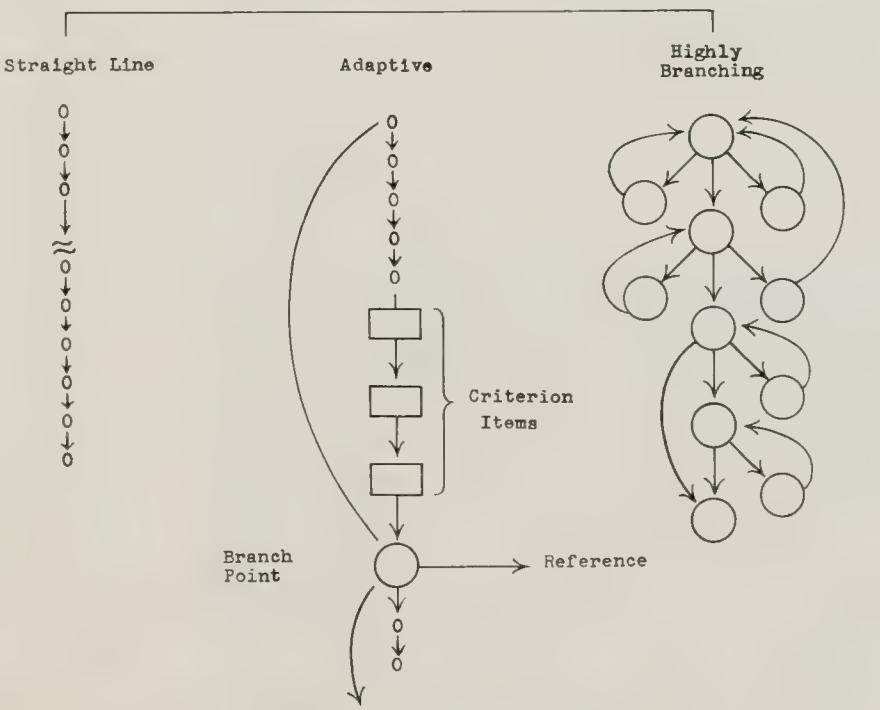

Figure 4: The Scale of Adaptiveness for Learning Programs. The Adaptive program is an intermediate type between the "straight line" and "highly-branching" types.

A PRIMER FOR BUSINESS:

(CONTINUED FROM THE PRECEDING PAGE)
programs and have reported quite satisfactory results. Many other organizations are in the midst of evaluation projects or are now planning them. Some of the types of business organizations engaged in trials of learning programs are shown in the table, together with the subject area they investigated.

Business Applications of Learning Programs

From the brief sampling (see chart) of business and government application of teaching machine technique, it appears that the principal uses of learning programs for business education have thus far fallen into three general categories:

1. Technical Subjects, such as Computer Programming, Electricity and Electronics.

2. Sales Training, to provide fundamental information about an industry, such as Insurance, Drugs, etc., and to implement new product data.

3. Business System Training, where retail sales procedures, stock management and account and procedures for customer service have been implemented and fortified.

To date, the application of learning programs to business training appears to be in a very preliminary stage. As the techniques of teaching with programmed learning are developed, we can expect a much longer list of areas of successful application.

How Can Teaching Machines Aid Industry

Lack of Effective Programs Is a Major Block to Their Wider Adoption

• by Donald Powell, Hamilton Research Associates

CONSIDERABLE CONTROVERSY has been generated in recent years over the many possible uses of teaching machines and programmed learning in easing one of industry's growing headaches, industrial training.

Industry's great need for training at all levels and in a wide variety of situations is treated as a fact of life today. The importance of training men who handle machines which have increased geometrically in cost and production is seldom disputed. The dividends of sound training programs have been proven time and time again.

Skilled Programming a Primary Need

Recently teaching machines and programmed learning in various forms have met success in many isolated cases as an efficient approach to training problems. It seems there is at least partial consensus that the lack of effective programs is the greatest stumbling block to the widespread adoption of this form of training by industry.

With this rough consensus as a base, opinions sharply diverge. This is not surprising, considering the young state of the art. Are machines necessary to take advantage of programmed materials? What type of machine best serves industry's purposes? While there are obviously no pat answers to these questions in all their variations, even a partial resolution of the underlying issues would hasten the time when this new educational tool will be of substantial benefit to industry.

As an "old timer" in this infant industry, Hamilton Research Associates, Inc., has dealt with all these problems, concentrating on developing a line of visual teaching machines using 4″ x 6″ cards. Our successes and setbacks have led up to a philosophy based on three convictions.

This Is Our Approach to the Problems

I. In most instances a machine is necessary in order to take greatest advantage of programmed materials.

II. With the present scarcity of adequate programmed materials the optimum machine design must serve two functions: As an effective aid to the programmer in designing and perfecting his program and as a versatile means of displaying his program.

III. The above aims should and can be met with a machine whose delivered cost will not represent such a capital outlay that it nullifies the other economies of programmed learning.

There are various methods of packaging programmed materials being espoused. They may be grouped into those which require machinery, and those which do not. Among the machines available are those that present items on mimeographed sheets, continuous printed strips, on cards and on film of various types. Under these methods which require no machinery, items are presented in programed textbooks, in separate cards or on mimeographed sheets. The answer is revealed by turning a page, a card or moving a mask.

Disadvantages of Manual Programs

We believe that those methods which do not utilize a machine are subject to some inherent difficulties. They require manual manipulation by the student in exposing successive items and information concerning correct responses. Since the student must divert his attention from the material under study in order to maintain the material in its proper sequence, a serious distraction can develop.

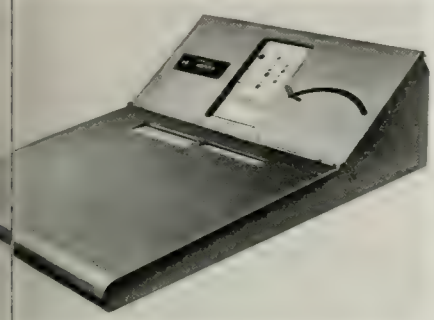
It is also easy for the student under these systems to view the correct response before recording his own, thus breaking the desired sequence of question, student response, correction and corrected response. Finally, without a machine it is not possible to ensure that the student will not skip questions or take the lesson in a random manner. This is especially serious in a program which has been developed in a large number of small sequential steps. A well-designed machine may overcome all these difficulties while still giving the student control over the pace with which he takes the lesson.

To Formulate Programs and Pre-Test

Convinced that a machine was necessary for most effective use of program materials, we also had strong convictions that such a machine should be of use in formulating programs and pretesting them as well as administering them. We were strengthened in this conviction by the obvious lack of programmed materials in comparison with the many pos-

How business and government apply teaching machine techniques. Other kinds of business organizations are exploring similar applications.

Types of Business	Subject of Learning Program
Insurance, Life	Sales Agent Training
Insurance, Casualty	Field Representative Training System Training for Automated Data Handling
Electronic Manufacturer	Field Sales Staff (New Product Information)
Telephone Company	Electricity (for Maintenance Personnel)
U. S. Air Force	Electronics (for Maintenance Personnel)
U. S. Navy	Accounting and Retail Sales Management
Department Stores	Retail Sales Procedures
Computer Company	Computer Programming
Pharmaceutical Company	Technical Sales Training



uses evident in both formal education and
nstrial training.

lthough published programs are beginning
appear on the market, in various forms, it
vi be several years before the needs for pro-
rms of a general nature will be filled. Even
vhn these needs are filled, there will still be
reat need for the specialized training pro-
rms which make up a majority of industrial
plications.

Advantages of a Card Machine Noted

Ve believe a card machine offers unique
dantages to the programmer at all stages of
rparation. The economy of the cards, and
h ample display space available (3″ x 3¾″),
l; their obvious versatility in sequencing,
nte them an excellent media for the initial
onulation of a program. Any corrections ob-
iously affect one unit only. This is especially
eful in the testing of a program.

xtensive testing and revision are prerequi-
it for good programming, even when done

Hamilton Research Associates' Visitutor

yexperts. There is conceded to be a fairly
lict relationship between the amount of effort
xended in this stage of the program's devel-
pment and the ultimate success of the pro-
rm. It is at this point that a machine can
n should be designed to be of real benefit
o he programmer.

Aids in All Stages of Development

Ve are convinced that a card machine is
rue in the assistance it can provide in all
tes of program development, from the
nial formulation, through revision, to the
rl pre-testing. In brief it offers the following
dantageous features:

.) Inexpensive materials which lower the
o of errors and revisions.

.) Inherent flexibility in sequencing and
e sion due to the use of cards.

.) Facilitates analysis through the use of
r r counts.

.) The construction of lessons in small
ns allows the use of the same program by
e ral students (i.e. student #1 . . lessons 1
n 2, student #2 . . lessons 3 and 4, etc.)
n eby lowering the number of programs and
n hines necessary to cover the same material
vi the same students.

.) Unitized construction of programs also
a itates branching at the lesson level, al-
y ng the instructor considerable leeway in
s gning units to students of varying profici-
n es.

inally the cards are a cheap and econom-
a way of displaying the finished program.

21st National Audio-Visual Convention

Over 3,200 Attend General Sessions, Visit Trade Show Exhibits in Chicago
Mahlon Martin Becomes President of the National Audio-Visual Association

RALLYING POINT for the men and women who make and sell the bulk of audio-visual projection equipment, materials and services to schools, churches, and business users throughout the U. S. and Canada is the annual convention and trade show of the National Audio-Visual Association.

This year the 21st gathering of NAVA members and guests brought a total of 3,241 persons to the meeting rooms and exhibit floors of Chicago's Hotel Morrison. Telegraphed greetings from President Kennedy set the keynote for the convention's opening session:

"Our nation must advance on all fronts if we are to achieve the excellence we seek in education, as well as in other fields of endeavor. Your association is making a vital contribution to this advance, in making more effective our means of communication with each other."

On Monday, July 24, the Association installed Mahlon H. Martin, head of the M. H. Martin Co., Massillon, Ohio, as its new president. Harold A. Fischer, owner of Photosound of Orlando, Florida, became first vice-president. The installation was conducted by retiring president Harvey W. Marks, of the Visual Aid Center, Denver, who became chairman of the NAVA Board.

Other Officers and Directors Installed

Other key officers for the new term include Robert P. Abrams, Williams, Brown & Earle, Inc., Philadelphia, second vice-president; Jerome W. Kintner, Photo & Sound Co., San Francisco, secretary; and Harold W. Newman, Newman Visual Education, Kalamazoo, Michigan, treasurer.

New directors-at-large of the Association are Floyd Miles, Audio-Visual Center, Pontiac, Michigan and Max Rarig, Rarig Motion Picture Company, Seattle, Washington. Member

* * *

At right: *General sessions of the 21st NAVA convention were held in the Terrace Casino of Chicago's Morrison. Key speakers on the program included Ben Peirez, Viewlex, Inc.; Joseph Burger; and John Forsythe, Committee Counsel of U. S. Senate, who spoke on the National Defense Education Act.*

Officers and directors *(l to r) back row: Jack Britton, Frank Bangs, Steve Bartha, Paul Cox, Murray Cunningham, Jim Thompson, Irv Nelsen, Howard Holt, Kermit Hanson, George Gibson, Pat Kilday. Front row: M. W. Huseman, Max Rarig, Eloise Keefe, Bob Abrams, Jerry Kintner, Hal Fischer, Joe Meidt, Floyd Miles; president Martin.*

(CONTINUED FROM PAGE 47)

Kermit F. Hanson, Headlight Film, Inc., South Portland, Maine, was installed as New England regional director and Howard Holt, Audio-Visual Film Service, Birmingham, Alabama, is regional director for the Southeast.

Convention attention was focussed on the fate of pending Aid to Education legislation and, specifically, on the National Defense Education Act then, as now, before the Congress for final disposition. Speaking on the subject at the opening session was John Forsythe, Washington, D. C., General Counsel of the Labor and Public Welfare Committee, U. S. Senate.

The "largest single exhibit of audio-visual equipment, materials and services assembled at any time under one roof" was the description given the 230-booth trade show. Covering two floors at the Morrison, these exhibits included the latest in motion picture, slide, slidefilm and opaque projection, both sound and silent, as well as new teaching machines, language laboratories, tape reproducers, closed-circuit television apparatus, materials for film and slide production as well as the recent offerings of educational and religious film producers.

A-V Groups Hold Meetings

Meeting concurrently during the convention were such groups as the A-V Conference of Medical & Allied Sciences; the Illinois Audio-Visual Association, an A-V Workshop of Industrial Training Directors and a regional meeting of the Industrial Audio-Visual Association. Formation of a new Chicago chapter of the National Visual Presentation was initiated during the four-day meeting with national officers from New York in attendance.

Above: *dynamic Ben Peirez asks "are profits a dirty word in your vocabulary?" in Convention talk.*

provide names of competent audio-visual spokesmen for talks and demonstrations. Two task forces were formed, one to study industrial standards with an aim toward increased qualifications to meet growing demands. The second ask

Members of the Industry and Business Council meet *during the convention as both dealer and advisory members hear report from Chairman Bob Abrams (extreme right) on cooperative programs underway.*

Principal officers below are *(l to r) front row: Harold A. Fischer, 1st vice-president; Mahlon Martin, president. Back row: Robert P. Abrams, 2nd vice-president; and Jerome Kintner, NAVA secretary.*

Of special interest to members concerned with service to business and industry was the meeting on July 23rd of NAVA's Industry and Business Council, headed by Robert P. Abrams. Reporting on the Council proceedings, Mr. Abrams noted:

Growing Use in Industry

"Almost every large and medium-size company now makes use of audio-visuals to some degree. Most are anxious to improve their techniques. These methods of communication have become vital in meeting competition, problems of increased costs of operation and in personnel development." Other Council activities were reviewed:

A directory of speakers is being compiled through the Council to force is working with universities and colleges to implement curricula in communication courses to more adequately meet the future needs of industry for skilled personnel.

A meeting of members of the Industrial Audio-Visual Association heard A. G. Clark, head of the Applied Communications Systems Division of Litton Industries describe that company's progress in teaching machines and programmed learning. A demonstration of the portable ACS Audio-Visual slide-tape unit was given these business a-v executives.

Plans for the 1962 Convention also being held at the Morrison were announced. The 22nd annual gathering will take place in Chicago, from July 21 through July 24, 1962.

Larry Madison: the Man and His Camera

A Word Portrait of a Dedicated Maker of Many Prize Films

by Robert Seymour, Jr.

THE MOST EXCITING THING Larry Madison had ever encountered in his young life a the miraculous emergence of n mage on his first home-made hotograph. Larry was 12 and he photograph was made with a econd-hand Brownie and a home arroom kit he had bought to ar a Boy Scout merit badge. if was never the same—Larry as bitten by the photo bug and as been infected ever since.

awrence E. Madison has had stinguished career in several reaches of the photographic art nt then. The "M" of MPO roductions since 1947, his docu- ne ary motion pictures have been w ded more prizes than proba- ly any other individual film- ak er in the country. Of the 56 m rican films selected to be sh n at the Brussels World's ai two years ago, six were Madison's. Just to name the titles wi which he has been identi- fie is to remember some of the es of American factual films:

he Tanglewood Story (U. S. ta Dept.); *Canada Goose* Dcks Unlimited); *Petrified ir* (Union Carbide Corp.); *a at the Moon* and *Gunning he Flyways* (Remington Arms o); *Hereford Heritage* (Ameri- n Hereford Assn.); *The World h Nature Forgot* and *Decision r Chemistry* (Monsanto Chemi- l Co.); *Fibers and Civilization* Cmstrand Corp.); *A Mile to lorado* (Reynolds Metals Co.); *eport to Ole* (Outboard Marine o .); and his latest, *The Un- e Harvesters* (DuPont Co.).

hen there's the famed Ford lor Company films such as *rican Cowboy, Men of Glou- ster, Pueblo Boy* and *Yellow- o e*. Finally, those widely-popu- r sports subjects for Nash Mo- r *Out of the North, Fishing in laska* and *Hunting in Alaska.*

ut motion pictures were not ly Madison's original love. He made a successful career as a il photographer years before he e peeked through the finder of a ie camera. Eager to concen- al on photography, Larry was aduated from the Pennsylvania a University in three and one l years and went off to New k to be a photographer.

After studying for a short time he Clarence H. White School hotography he decided to set his own business. The next years that he spent as a com- ial still man he considers to he most valuable training he has ever had for motion picture work.

Working for such hard-won clients as General Foods, Coty, Black Starr, Jensen, etc., Madison taught himself to be a table-top perfectionist. He remembers spending literally hundreds of hours working on a silver tea set

or a diamond necklace. After living with a thing like that for a couple of weeks you finally learn about light, and what it can do, he says.

•

In 1942, Larry Madison met Willard Van Dyke, a dean of documentary film-makers then, as now. Van Dyke gave him some still work to do and began to interest him in motion pictures. The more Larry thought about the challenge and rewards of making pictures move, the more fascinated he became.

Finally, late in 1942, he abandoned his first career and joined Van Dyke and Herbert Kerkow as an apprentice. He did a little bit of everything in this job from sweeping up to assistant in every branch of film-making: photography, editing, sound, writing, directing, etc.

Herbert Kerkow remembers teaching Larry Madison how to operate a camera. The lessons consisted of setting up all the equipment in a field, shooting two feet of film, tearing all the gear down, packing up, moving to another corner of the field, setting up . . . and so on until well into darkness.

"After several days of this," Kerkow says now, "Larry would hardly speak to us, but I'll bet he's never forgotten how to set up quickly under any conditions since then."

Larry remembers Van Dyke and Kerkow as hard task-masters but the best teachers in the world. "You had so much to do all the time you just had to learn."

One time, making a Navy training film, Madison was sent all alone with a complete 35mm-outfit to direct and film a beach-landing by an amphibious task force in Florida. The night before the big scene, he broke his leg, but next day, cast and all, the one-man crew was out on the beach making 180° pans and bringing back outstanding footage that some Navy men remember today.

After two more films for Herbert Kerkow, Madison went to work for the Office of War Information as cameraman, in 1943-1944. Some of his credits then were: *Steel Town; The Cummington Story; The Town; Pacific Northwest, U. S. A.;* and *United Nations Conference.*

After the war, Madison joined Transfilm, Inc., which had signed a contract with Ford Motor Company to produce three films on different aspects of Americana. On these three films, which Larry Madison photographed and directed, was born the reputation which led to his later work with the elite of American film sponsors. The three films were *Men of Gloucester, Pueblo Boy,* and *Southern Highlanders.*

Just three people made up the crew and did all the production work — including synchronized sound—on these films. Larry was director and photographer, Burton C. "Jack" Rowles was writer, and Rodney Albright helped in all categories. The three, with their wives and children, lived together, camped out together, and thought of nothing else but the films for several months at a time. "I still say that is the best way to make pictures," Larry Madison says now.

•

After returning to Willard Van Dyke briefly in 1947 to photograph *Bryn Mawr,* Madison met two men, Judd L. Pollock and Paul O'Haire, who were working out plans to form a film production company. Together with Pollock, who had been an executive at Young & Rubicam, and O'Haire, who was a well-known commercial art representative, Madison became part of the MPO trio, the nucleus of a company which has since become one of the largest and most prosperous in the country.

(O'Haire felt a call to other pursuits soon after the company was organized and left MPO. He is now the proprietor of a very successful hunting and fishing camp in New Brunswick. Larry says, "I don't think Paul has ever envied any of us one bit.")

MPO had no silver spoon in its corporate mouth in its early life. Existence was precariousness-plus. The office was a tiny room at the Yale Club and the clients were none.

The first man to take a chance on the young company was Frank Howe, of Pan American. He sent them to do a *Wings to* . . . type of thing on Hawaii, and with Howe's typical genius for finding —and getting the most out of—

. . . a master of outdoor films is making his mark within industry.

"It Takes Living With a Film and Loving It for Days on End"

talent, the picture was a solid success—it stands up well today, 12 years later.

Both Madison and Pollock were—and are—enthusiastic outdoor types, and with their connections in the sportsmen's world a clientele was gradually built up. George Mason, President of Nash Motors, and Ed Zern, of Geyer, Newell, and Ganger, the Nash agency, sponsored *Fishing in Alaska*, *Hunting in Alaska*, and *Out of the North*, pictures which are still classics in any list of outdoor films.

But it was paradoxical that Madison, the table-top still photo expert, the man who had made his living lighting up things like silver tea sets, was now confined almost entirely to "fish and duck" pictures. It took several years to end this typecasting but Larry finally was making his mark not only as an outdoor cinematographer nonpareil but as director and photographer of such "indoor" masterpieces as *Decision for Chemistry*, *Fibers and Civilization*, and *The World That Nature Forgot*.

•

In 1958, Madison was now a principal executive of an MPO Productions which had grown out of all recognition from the one-room operation of 1948-1950. He found himself obligated to work on too many films at once—to not only produce his own films, but to supervise other producers on the MPO staff. It got to be so frustrating to the intense *personal* film-making side of his nature that one day he decided to end the problems and get away from the administrative headaches of the company.

Although he sold his interest in MPO back to the company, Madison maintains an office there and uses all the facilities of the company for the films which he works on himself—his own productions—within the MPO framework.

Madison thinks he is as miscast as a commuter as he was as an administrative businessman. 500 hours a year spent going back and forth from Scarsdale are too much, he thinks. Several years ago he bought some land on a lake in Northwestern Connecticut, cleared the land and built a house, himself. He has editing rooms there, and in Scarsdale, would like to be able to take on two or three films a year, do much or all of the work himself in his lakeside retreat.

The Madison household consists of Mrs. Madison, two sons, Larry and Alan, and 20 beagles. Peggy Madison is Larry's alter ego. She has a master's degree in economics, has headed the Scarsdale PTA, is active in the League of Women Voters.

Of the two boys, Larry is interested in films, acting, would like to be a film director, and is majoring in dramatics at Stanford. Alan, the younger, is a Huckleberry Finn character who'd rather be out in the woods and fields than indoors. The beagles are a hobby Larry has carried on for many years—to breed very small beagles able to compete successfully in the field with larger dogs.

•

The Madison credo of film-making is as controversial as the man, himself. Producing companies mean practically nothing to the success of a film, he thinks. Any film company can do an adequate job. But three people are all-important—the writer, the director, and the cameraman, and of these the cameraman will make or break the average sponsored film.

In the average industrial or commercial film the strength of the film lies first in the writer's originality and freshness in presenting the story of an industry or one of industry's problems and second in the skill of the cameraman or the director, if he is an artist and topnotch visualizer.

Most industrial films, in one way or another are, to employ a much-used expression, "a walk through the plant." That expression has become synonymous with "dull." The client certainly does not believe his business is dull or he would not contract to make a film portraying it.

Most any industry can be made exciting—it is just a question of how good is the cameraman's eye and how well can the writer dig out an exciting story. Perhaps on some films of very routine content it may not be important that the picture be great, as long as it is clean and track is recorded well, but Madison believes that on most films the picture should sing with excitement and it is this aspect that separates the sheep from the goats.

Of his personal film-making techniques, Larry Madison is noted for being able to *hand-hold* a camera with a steadiness and fluidity that defies detection. This allows him to achieve a casualness that cannot be duplicated on a tripod. As he is almost always his own producer and editor, as well, he can take chances—shoot quickly, even wildly sometimes—go way beyond the safe, prescribed shots. He is basically a complete film maker, knows instinctively what he has to get to put a sequence together, what he needs to introduce the scene, the cutaway shot. This comes so natura[l] to him that he never has to pl[an] in advance.

For instance, in *American co[w] boy* there is a scene of the co[w] boys having lunch at a big [ta]ble on the grass and horsing a[r]ound in typical cowboy style. O[ne] of the hands throws a glass of [wa]ter on another, and a free-for-a[ll] begins. We can see this is j[ust] a natural a bit of high-jinks [as] can be imagined. It is one of the [most] delightful bits in the picture. If it had been staged, the co[w]boys would have frozen up, an[d] the naturalness couldn't have [been] duplicated in a hundred tak[es].

•

It is this complete film [ma]ker quality and speed in recor[d]ing situations like this that [give] Madison's films such a live[ly] and natural quality.

Madison thinks that camer[a]men are too often restricted by [the] script that call for "long shot of [the] table"—the script doesn't a[sk] for any more, the producer and [the] sponsor expect no more—sadly—and the cameraman just won't stic[k] his neck out to try for more—[or] think he ought to waste the film.

Larry points to the typical TV commercial. Such beautiful sets, beautiful actors, wonderful [light]ing, but so pat, so static and phony as to be completely [un]believable.

Madison worries a great deal about where new talent will [come] from. He is sad about the [cur]rent age of specialists—the division of film-making into dozens of [re]strictive trades.

"I don't see how you [can] get real quality out of a group of [peo]ple who are just working [for] a day's pay," he says, "it take[s liv]ing with the film and loving [it] for days and nights on end. [That's] the only way."

•

And as for Larry Ma[dison] that's the way he hopes to [work] from here on in. He would [like] to take on two or at the most [three] films a year, films that he [feels] are really geared to his particular talents, and that he can take [real] and pleasure in. "The pleasure [in] doing a film, the right film, [can] help but show up in the final [prod]uct, giving it a lift and an [extra] dimension of quality," he [feels].

Taking the time to do film [this] way would give the client [real] bonus at the end. And the [great]ure in providing that would [in] turn, be all the bonus Larry [Mad]son wants for himself.

Director Forney Miller; cameraman John Goerg of GE's a-v operation.

"People With Purpose" Brings Employers Schenectady Story

A city fighting against the gradual decline of jobs and erosion of economic health took a major step toward eventual solution of the problem by heralding its benefits for business program in a new 20-minute 16mm film.

The core of a broad program of self-help, *People with a Purpose* is a cooperative effort of the people of Schenectady, New York, and the Schenectady County. The film points out the availability of up-state New York's wealth of natural resources, proximity of all kinds of transportation and, most important, discusses the community's surplus of skilled workers.

Divided into two segments, this poignant film first shows the drama of the city by flashes of its buildings which range from post revolutionary houses to ultra-modern homes and factories. The second section breathes life into the city by adding its most important element—its people.

Using both black and white and color, the picture graphically details the industrial, cultural and recreational activities of the Schenectady area which have already brought over two and one-half million new payroll dollars to the community. It is expected to substantially aid the economic picture by interesting management of industrial, commercial and service organizations in locating in the Schenectady area.

About one and one-half years in the making, the documentary film was produced as a community service by General Electric Company's Audio-Visual Communications Operation.

More than 40 musical selections are contained in the 16mm film, and over 245 Schenectady citizens contributed to making the documentary.

It is available to management groups who might be interested in relocating by writing to: SIDC, 246 State Street, Schenectady, New York.

Bethlehem's "This Is Steel" Now Available on Free Loan

☆ The drama of steel—its making and shaping—is unfolded in 33 action-packed minutes in *This Is Steel*, Bethlehem Steel Company's new 16mm sound-and-color educational film now available for group use.

This new film replaces three earlier black and white films: *Highlights In Steelmaking, Parts I and II*, and *This Is Steel*, which go back as far as 1941. More than 3,000,000 viewers have seen these three pictures during the two decades in which they were in use.

Steelmaking and motion picture-making techniques are brought up to date in the new *This Is Steel*. It is suitable for audiences of high school age level or above, as it provides a generalized, educational look at modern steel manufacturing.

Both open hearth and electric arc steelmaking processes are shown, as well as the shaping of steel through various processes such as sheet, rod and wire, forgings, and tool steel, among others. The importance of quality control and of human skill is repeatedly emphasized.

A print can be secured from the nearest of 30 Modern Talking Picture Service offices, nationwide.

"Breaking Delegation Ba[rrier] Shows How to Use Authority

☆ Helping supervisors to [o]vercome their fear of delegati[ng] authority and responsibility t[o] subordinates is the aim of [a] 30-minute film from Rou[ndtab]le Productions.

Breaking the Delegation [Bar]rier is the sixth release in Roun[dtab]le's series of supervisory develo[p]ment films. The technical consultant [on] this film with personnel i[m]plications was Dr. John Gerlett.

The method employed is [to] develop an understanding [of] delegation and what it can do [to] increase efficiency and promo[te] personal growth at all levels [of] management.

A realistic story is told [of a] company faced with expansion and a rush contract. It shows how authority was delegated to the department heads and how each man almost fails to meet the contract deadline due to his [in]ability delegating work to his subordinates.

Three cases are examined: In the first, a designer is not willing to let his men take over some of the work because he fears loss of his job satisfaction; in the second, a comptroller-supervisor makes an attempt at delegation, but because he fears mistakes, he reacts too strongly when one is made—his men are then unwilling to make decisions for themselves for fear of the possible repercussions; in the third, a young supervisor in charge of expediting fears one of his men is threatening his authority by trying to "build an empire for himself."

In each case, *Breaking the Delegation Barrier* shows how fear was overcome and the [pro]blem of delegation was able to [be] the company, the supervisors and the workers.

For information on the [film], preview prints, write the [pro]ducer: Roundtable Production [Co.], 9 South Beverly Drive, [Bev]erly Hills, California.

EXECUTIVE NOTES:

Marty Young in Exec Post at Keitz & Herndon, Dallas

Larry F. Herndon, president of Keitz & Herndon, Inc., Dallas, has announced the appointment of Marty R. Young as director of live photography and business-industrial films for the 11-year-old production firm.

A native of El Paso, Young was executive vice-president and general manager of Motion Pictures, Inc., of Dallas, for the past two years.

Keitz & Herndon director Young

Young has a number of American Film Festival and Columbus Film Festival award-winning motion pictures to his credit. He produced and directed *The Star Dry Story* and *The Justin Story*, for Ranger Boot & Shoe Mfg. Co. and Justin Boot Co., respectively, award-winners at these events.

He also directed and produced the *Inside Football* and *Inside Basketball* TV series, starring Bud Wilkinson of Oklahoma, for the National Guard and informational films for Texas Instruments and Bell Helicopter.

At Keitz & Herndon, he will supervise both productions and handle industrial client relations.

* * *

Coti, Howard in Exec Posts at Ad Radio & TV Services

New York, and Monarch Films, Hollywood, will offer such services as wire photo communication of story boards, set design sketches, photographs of permanent sets, instant composites and prospective locations to keep Eastern agency production departments current with all stages of Hollywood activity. Daily print service will be another key service offered by the new firm.

Edwin T. Kasper, of VPI, will be president of VPI/Monarch. James H. Chapin and George Tompkins, of VPI, will be executive vice presidents.

VPI Productions, established in January, 1959, has increased its volume from $600,000 in 1959 to $500,000 in 1960 to a projected $1,500,000 for 1961. Monarch Films, established in June, 1960, had a volume for the six-month period ending December 31, 1960, of $500,000. Projected gross for 1961 is $1,000,000.

Outside of the cross continent service VPI and Monarch will continue to produce independently of each other.

* * *

Movielab Sales, Earnings Set Record for Second '61 Period

☆ Sales and earnings of Movielab Film Laboratories, Inc., for the second quarter of 1961 were the best for this period in the company's history. President Saul Jeffee made the disclosure in a recent letter to shareholders.

Sales for the quarter ending July 1, were $1,390,069, an increase of 10% over the like period last year. Net income after all charges and taxes was $60,675, equal to 19 cents a share on 312,500 common shares outstanding at the period's close.

Movielab's common stock has been accepted for listing by the American Stock Exchange, Mr. Jeffee noted. Trading should begin shortly, he added. Current operations are being conducted on an around-the-clock basis, five days a week and completion is expected in September of a new black and white motion picture processing machine. Color facilities are also being enlarged to handle the influx of new business.

Britannica Center's Advisors Discuss Programmed Learning

☆ An advisory board of distinguished educators and scientists has been established to assist the Britannica Center for Studies in Learning and Motivation, located on the campus of Hollins College, Roanoke, Va.

Allen D. Calvin, Director of the Center, announced that the board includes: Henry Chauncey, President of the Educational Testing Service, Princeton, N. J.; John G. Darley, executive officer of the American Psychological Association; Alvin C. Eurich, Executive Director of the Ford Foundation; John R. Everett, Chancellor of the City University of New York; William Jansen, Professor of Education at Rutgers University and former New York City Superintendent of Schools; and Robert M. Hutchins, President of the Center for the Study of Democratic Institutions of the Fund for the Republic.

The group plans a discussion of the field of programmed instruction. Standards for programmed learning and the role that the Britannica Center will play in the education field will be explored.

New AUDIO-VISUAL Equipment

Recent Product Developments for Projection and Production

. . . *Kodak's transistorized Pageant*

New Kodak 16mm Pageant Has Solid-State Sound System

☆ An all-new Kodak Pageant 16-mm sound projector, Model AV-126-TR, was unveiled by the Eastman Kodak Company at the recent National Audio-Visual Trade Show in Chicago. Said to be the first 16mm motion picture projector with a completely solid-state sound system, the projector can be turned on and put in operation immediately without a warm-up period.

A seven-transistor, high-fidelity amplifier and one-switch control are principal features of the Model AV-126-TR. According to the company, the solid-state sound system means longer, more economical service because transistors, unlike vacuum tubes, do not burn out.

All three major operating functions—blower, lamp, and forward or reverse—are conveniently interlocked with a single lever switch. The straight-line master control lever enables the operator to run the projector in forward or reverse by simply turning in corresponding direction.

The new amplifier has a frequency response of 30 to 20,000 cycles, well beyond the range of most optical sound tracks, to provide both clarity and brilliance of reproduction—voice as well as music. An 11 x 6-inch speaker is matched exactly to the amplifier. The Kodak Super-40 shutter delivers maximum light at either sound speeds for either long throws or poorly-darkened rooms.

The exciter lamp, powered by direct current, is rated for the life of the machine under normal operating conditions. Projector measures 16 x 12½ x 11½-inches and weighs 35½ pounds. Model AV-126-TR is equipped with a 2-inch Kodak Ektanar Lumenized projection lens, f:1.6, with field flattener. Lubricated for life by oil-impregnated super oilite bearings, sealed ball bearings, and oil retaining pads, the latest 16mm Pageant is now in the hands of Kodak audio-visual dealers nationwide.

DuKane Announces Details on New "AV-Matic" Projectors

☆ The DuKane Corporation has announced the availability of the new "AV-Matic" sound slidefilm projector, Model No. 14A285. A completely automatic filmstrip projector, the "AV-Matic" has a unique optical and mirror system

. . . *desktop viewing with AV-Matic*

which projects clear brilliant pictures on the 9″ x 7″ TV-type screen.

Always in focus, the pictures change automatically in synchronization with the recorded message by means of a patented low frequency 30/50 inaudible signal. The "AV-Matic" used 35mm single frame filmstrip and 33⅓ rpm records up to and including 12″ in diameter.

The unit features the DuKane "Redi-Wind" system that automatically rewinds the film as it is shown, a simple push-in film carrier which is easily removed for cleaning, and input for necessary headset earphone or pillow earphone. Projector measures 15″ x 13″ x 18″ and weighs 17 pounds. It is available through the Audio-Visual Division, DuKane Corporation, St. Charles, Ill.

Fred. Watson Displays 8mm Sound Projectors in N. Y.

☆ Frederick F. Watson, Inc., New York film-striping company, has inaugurated a public display of 8mm sound projectors at the firm's offices, 202 East 44th Street.

Grouped on a large table and equipped with HPI Projector Scopes for easy comparative viewing are Fairchild, Kodak, Tandberg, Agfa and Bolex 8mm sound units. Films which were reduced, striped and "sounded" by the Watson company are available for viewing either on the scope or in the projection room.

Gray Unveils New Audioslides for Use on D-Scope Projector

☆ The Gray Manufacturing Company, manufacturer of Audograph dictation instruments, television projectors and sound equipment, has entered the field of audio-visual projection with a new sound-slide system. The Gray "Audioslide" is described as a unique invention that combines on an individual slide both picture and high-fidelity sound.

Each Audioslide provides up to three full minutes of sound which can be recorded on the spot. The picture area accommodates color or black and white 35mm film clips or 2″ x 2″ mounts in an automatic sound-slide magazine with a capacity of 36 Audioslides.

Sound is manually recorded in a spiral track around the picture area in the Audioslide. The sound is then "read" off the slide by a special rotating sound pickup mounted in the D-Scope projector. Embossed recording and standard record-cutting and pressing techniques are said to be equally well suited for sound track production.

Individual slides permit editing, changes and rearrangement of programs. The Gray system facilitates either mass production of sound-on-slide programs or the preparation of a single sound track for one slide.

According to Gray President, William Conover, "To properly present this unique information package—the Audioslide—Gray developed advanced components for slide changing and projection

Process control *and production line assembly work are facilitated by use of fast Polaroid transparency and in-plant recording of Audioslides used to show operator work detail.*

Gray Audioslide System *inc de D-Scope projector with self on tained rear-projection screen un carrying case. New Audiosli pictured at lower left.*

as well as sound reproduc which resulted in the new con D-Scope projector."

The D-Scope projector pro for both front and rear proje It is sold complete with screen, magazine, remote co and power cords packed int carrying case weighing slightly than 15 pounds.

Versatile Projection Lens Announced by Kalart-Victor

A new projection lens designed to increase the versatility of Kalart Victor 16mm sound projectors is now being made available as a projector accessory by the Victor Animatograph Corporation, Division of the Kalart Company, Inc., Plainville, Conn.

The lens, with an aperture of f:2, has a variable focal length from 1½ to 2½ inches. The Victor Zoom Lens is of greatest value as an accessory for projectors that are not used in permanent installations. Room and screen size are rarely limiting factors when a projector is equipped with a Victor Zoom Lens, and, therefore, films may be shown under a wide variety of conditions.

The complete line of accessories is available through all authorized Victor Audio-Visual dealers.

The Master Intervalometer is a programming and control instrument designed to operate the Arriflex-16 with its single frame drive, lights, accessories and related equipment in a broad range of motion picture time-lapse applications.

The Master Intervalometer has adjustable framing rates from one second to 25 minutes, or on special order, as long as 10 hours.

. . . aid for time-lapse production

Numerous exposure times are obtained directly from the standard single frame drives themselves.

Two models of the Master Intervalometer provide adjustable time exposures. All models will automatically control lights and 115 volt AC auxiliary equipment up to a total of 1500 watts.

The Master Intervalometer, which may be readily used with either the Arriflex-16 or the Arriflex-35, may be ordered in any of four standard models from all franchised Arriflex dealers. Write the New Products Desk, BUSINESS SCREEN, 7064 Sheridan Rd., Chicago 26, for data sheet.

New ColorTran Cine-Queen by Natural Lighting Corp.

☆ Natural Lighting Corp., Burbank, Calif., has announced the development of a new ColorTran Cine-Queen, a wide-flood lighting unit for the motion picture, TV and industrial photography fields.

The Cine-Queen light unit employs the new 1500-watt General Electric lamp, which produces a rectangular area of flood illumination at 3350K color temperature from any 120 volt AC or DC power source. No converter is needed because of the pre-boosted filament construction of the lamp. The Cine-Queen draws 12 amps from the circuit.

Kodak Announces New Reflex Special for Film Producers

☆ A new professional 16mm reflex camera introduced by the Eastman Kodak Company allows the cinematographer to see exactly what his film records.

The Kodak Reflex Special is a low-cost, compact unit designed to serve a wide range of needs in the production of both silent and sound motion pictures.

The Reflex Special takes its name from the reflex finder which enables the operator to view the image photographed through the taking lens while the unit is in operation. Weighing approximately 24 pounds, the camera has a synchronous motor which can be removed and replaced by a variable speed motor or a drive unit designed for time and motion studies.

Similarly, the entire film handling mechanism can be removed for cleaning or maintenance.

The Reflex Special is shipped with a 400-foot magazine as standard equipment. The 400-foot chamber can also be used with 100-foot or 200-foot rolls of film on a camera spool. 1200-foot magazines are available on an optional basis. The camera can also accommodate 100-foot rolls of film internally.

The camera turns off automatically if the film is not feeding properly and must be in perfect order before the camera door will close.

Standard optional equipment calls for a 25mm f/1.4 Ekton lens, but a full range of lenses, from 10mm to 150mm, is also available.

Important features of the Reflex Special include a ground glass focus point which corresponds exactly with the film plane, an adjustable viewfinder eyepiece with a magnification of 10:1 which can be changed to 20:1 for critical focusing, and a neon motor light in the remote hand-operating switch which indicates when the power is being delivered to the drive motor.

. . . the new Kodak Reflex S[pecial]

Other optional accessories include a variable speed drive for time and motion study drive, a blimp device. A magnetic sound recording system will be available for the camera at a later date.

The base price for the camera equipped with one 400-foot magazine, a 24 fps synchronous motor drive, a 25mm f/1.4 lens and adapter for a director-type viewfinder and a sunshade and filter box is $1,895. It will be sold di[rect]

Da-Lite Offers Brackets to Eliminate Screen Keystone

☆ Da-Lite Screen Co., Inc., Warsaw, Ind., has introduced Keystone Eliminator Brackets to hold the case of a wall-mounted projection screen out away from the

. . . brackets slant screen surface.

wall so that the screen surface can be correctly slanted for overhead projection use.

The new brackets eliminate the "keystone" effect from projecting upward on a straight hanging screen and the viewing surface is optically correct.

These new brackets can be easily used with Da-Lite Model "B" or "C" screens, or with the Da-Lite Junior Electrol, providing dual usage of screens at modest cost. For regular projection the screen simply hangs straight down from the brackets.

The screen case can be extended 15" to 24" from the wall by simple wing nut and bolt adjustment. The sturdy, heavy gauge steel brackets are sold in pairs at $10 per pair.

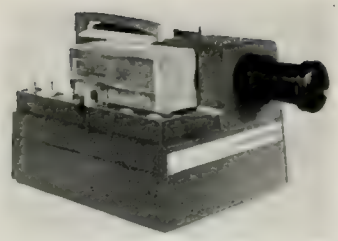
Genarco Rear-Projection Guide

☆ A new brochure entitled "Rear Projection of Slides in Large Meetings," has been published by Genarco Inc., manufacturers of high-power lighting and 3,000-watt slide projectors.



The brochure explains rear projection and its advantages, and offers guides for selecting and using rear projection equipment. Readers may write for a copy of brochure #313, to: Genarco Inc., 97-04 Sutphin Boulevard, Jamaica 35, N. Y.

Buhl RS-130 Lens Doubles Screen Images for Slides

☆ Space no longer need limit your 2 x 2 slide showings. Now you can *double* the size of the pictures with your Airequipt Projector by simply slipping a Buhl RS-310 lens over the regular projector lens.

The attachment is perfect for Minox and subminiature slides. It makes home or office rear screen projection really practical. Its short throw, wide angle features put big pictures on the rear screen in a minimum distance.

The RS-310 is not just a simple "portrait attachment." It is a fine coated, four element, color corrected system, designed specifically for Airequipt projectors. It gives maximum picture size in the shortest throw, with virtually no

. . . Buhl lens on an Airequipt

illumination loss. The item is priced at $39.50. Further information is available from Buhl Optical Company, Pittsburgh, Pa., or write the New Products Desk, BUSINESS SCREEN, 7064 Sheridan Rd., Chicago 26.

Chicago Unlimited Appoints Perry as Executive Secretary

☆ Bill Perry, for the past eight years a staffer in the TV-radio and public relations department of the National Safety Council, has resigned to affiliate on September 5 with the offices of the Academy of Television Arts and Sciences and of Chicago Unlimited.

Perry succeeds Ned Williams as executive secretary of the two organizations, as well as editor and advertising manager of the CU Directory, a semi-annual guide book, and the CU Digest, a weekly newsletter.

Williams, identified with CU for nine years, and with the TV Academy Chapter since it was formed three years ago, will retire to Council Bluffs, Iowa.

EBF Names Hochhauser as New Director of Marketing

☆ Filling a new post as director of marketing at Encyclopaedia Britannica Films, Inc., Wilmette, Ill., is Edward Hochhauser, Jr. The appointment was announced by president Maurice B. Mitchell.

EBF is broadening the range of its school services this fall as its printed TEMAC programmed learning materials for mathematics and language study go into use in some 400 school systems, colleges and universities.

Mr. Hochhauser, a graduate of the University of Virginia, was formerly advertising and sales promotion director for Muzak Corp., New York.

MATERNITY CARE

(CONTINUED FROM PAGE 3

now.' We bring husband in labor because they can be so supportive. We nurture the family as a unit at the time of its reunion."

Hospital Maternity Care was produced from a script and pre-planned narration on the basic aspects of the family-centered system. In addition, it contains vivid, live, beautifully photographed and edited extemporaneous scenes of one Sister explaining the five stages of childbirth to a group of expectant mothers: "This is what you'll probably want to pick up and go home."

But the St. Mary's mothers have proved that labor is shorter under the new system, and deliveries easier. The culminating incident in the film is a startling close-up shot of a mother during the birth of her baby. This brief intimate sequence shows not one, but a happy, smiling mother, the husband holding her hand, and the anaesthetist standing by but not once using his drugs. Finally, a spanked, unsleepy baby cries out at joining the world.

The film, which has been designed for showings to professional groups, was a stand-out at the recent medical film exhibition of the American Medical Association convention in New York. It has also been awarded a Winner Diploma at the Vancouver Film Festival.

TEACHING MACHINES:

(CONTINUED FROM PAGE FORTY-SEVEN)

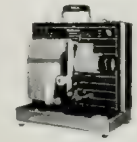
Answer sheets can be mimeographed. The program cards themselves may be typewritten, or drawn, then reproduced cheaply by multilith or conventional printing processes. The cards, of course, may be used over and over again. They represent a substantial saving in space, which in industrial usage with widespread distribution at various manufacturing or selling sites, can mean a substantial saving over conventional training materials in postage alone.

As the number of programs proliferate, microfilm will represent the opportunity for substantial additional savings in space and handling effort. Hamilton Research Associates, Inc., has developed such a machine, with forty frames contained in a single aperture card. As program libraries grow, the substantial savings in space and handling expense will more than justify the higher cost of such machines.

To date, therefore, our greatest effort has been expended on developing the Visitutor series of visual teaching machines. The present model, the Visitutor Card Model 200, is a limited production model and has been tested, or is in use, in over sixty educational or industrial locations.

The machine illustrated displays questions and correct answers on 4″ x 6″ cards synchronized with an 8½″ x 11″ answer sheet. The machine is actuated by a lever which first presents the new question, then on the return stroke exposes the correct response while indexing the answer written by the student under a Plexiglas window so that he may compare his response with the correct one given, but may not alter his initial response. If he is incorrect, he may then record the correct response in a slot next to his initial response. The cartridge of the machine holds a 40-card lesson, which with its reversible feature means that 80 frames can be shown from one set of cards.

A new model, designed for quantity production, will introduce further simplification and reliability, but will retain the basic features of the present machine. It will, however, reduce delivery cost in line with our third objective.



With the increased interest of the training offices of industry providing an effective stimulus, we anticipate continued progress in the development of machines and accelerated progress in the development of programs to the point where automated instruction will make a major contribution to industrial training in the form of lower-cost, long-term, high-quality instruction.

Public Service Theme) in the National Visual Presentation competition. *Frontiers* could have achieved honors in *any* classification but is primarily a conservation and general information film on the Western states served by its sponsor, the First Security Corporation, a Utah bank.

The Greater Columbus Film Council, sponsors of this annual award competition, is unique among regional organizations and its hard-working membership has been frequently cited for the handling of this event. Herschel S. Stephan is president of the Council; vice-president is John M. Seidel and its executive director is Daniel F. Prugh. The Council board of trustees includes business, educational and professional leaders in the Greater Columbus area and is headed by Hugh Huntington.

"CITY ON THE HORIZON"

When a company is doing a good job for its customers, the public often takes it for granted.

Wisely, the Rochester Gas and Electric Corporation uses the color motion picture, "City on the Horizon", to dramatize how well it serves the community, day and night, year after year.

To help present your story so it counts call

Camera Eye

THE EDITORIAL VIEWPOINT

THROUGH INEXPLICABLE DELAYS and bureaucratic procrastination, an historic motion picture of Astronaut Alan Shepard's successful sub-orbital flight on May 5th titled *Freedom* 7, has not yet gone into distribution. We publicized this important color film months ago, following its showing at the Industry Film Producers Association meeting in California. But National Aeronautics & Space Administration men who *could and should* have cleared this picture to the American people are denying citizen groups, workers in missile and other defense plants their right to share the record of this achievement.

Worse yet, a Russian-made 60-minute documentary film, heavily loaded with propaganda and direct ridicule of America's space effort, was screened in Washington at the October sessions of the International Astronautical Congress. Yuri Gagarin's orbital journey around the earth is the subject of this Soviet picture, though it contains only a brief sequence in which he is presumably feeding himself in flight from squeeze tubes of food.

In NASA's excellent *Freedom* 7, there are memorable scenes taken in flight of Shepard's reactions. In fact, this picture is an undeniable factual record which "lifts" the viewer into space, is far superior in content, lack of *anti-anything* propaganda. America and the free world want this picture! Anyone responsible for the unwarranted delay in withholding *Freedom* 7 owes this nation an immediate explanation. If it is not forthcoming, must we believe that this is one more example of how bureaucrats can help lose the battle for freedom?

* * *

Largest Audiences in History Are Viewing Today's Colorful Business-Sponsored Films

☆ There's tremendous news in the surge of sponsored motion pictures toward new distribution records! More people are seeking and seeing today's better business films than at any time in history.

For example, just one sponsored film distribution network delivered 16mm prints for its clients to over 1,500,000 group audiences throughout the U.S. last year. These films were *requested* for showings in clubs, lodges, plants schools, churches, etc. Nearly 68 million persons were registered in attendance in these influential group audiences. Often, these films were the subject of discussion and review. Science and technical subjects among them played a key role in motivating students and workers; health and safety education was provided.

Riding the crest of television's popularity and spurred by the growing interest of station program directors in useful educational fare this same network reports another 46,000 showings by television stations, with a modest estimate of only 40,000 viewers per showing. This another two billion audience for factua Finally, an additional 16½ million goers saw sponsored short subjects a 56,000 theatrical showings. Theatre m set a very high standard of public inter entertainment value before accepting the subjects for their big screens and pai omers.

The point of all this is the lusty he the sponsored film medium, the co popularity and prosperity of 16mm w counts most—out among the viewers figures validate important budgets sponsoring companies but they also und the importance of *quality production of while subjects.* That's the sponsor's e ing "ticket of admission" to these volun diences.

Within the film industry, this climbi dience factor is most significant. It emp the fact that *film dimensions find the level.* Every current film of significan either produced in 35mm or 16mm; prints found their way to theatres, prints (mostly in color) went to groups or having access to more than a half existing 16mm sound projectors. 8mm find its way, some day, into schoo churches, plants and offices. But today dium is the 16mm sound motion pictur and if you're a producer or a laborator ager, don't forget that *quality of intere quality of craftsmanship* go hand in h guide and guard the future of the factu medium.

* * *

A Salute to Radiant's President on Hi 25th Anniversary in the Audio-Visual

☆ A toast to an industry leader and ou friend, Adolph Wertheimer, president Radiant Manufacturing Corporation, 25th Anniversary in this business. One world's largest makers of projection s Radiant was a contemporary of ours wh company made its humble start in th 30's. We've watched it grow and pr watched this man and his associates bld business on service and innovations. seen Radiant's president give of himse stintingly in industry affairs and enjoy open-handed hospitality at those NAVA convention fuctions.

But, most of all, this master salesma infused enthusiasm and a badly-needed p of determination into those who sell and who use this essential end-product. R screens go 'round the world, building Am business, serving viewers in the four c of the globe as they serve throughout tion and industry here at home.

The result is that big, modern plant in ton Grove, Illinois that grew out of one tireless drive and infecious spirit. the president's desk out there, you'll fin Adolph Wertheimer with one hand wav telephone while the other gestures "welc *Happy 25th anniversary from all Adolph, and may the next 25 be as derful as those years to date!*

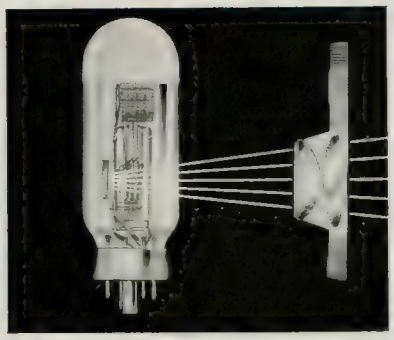
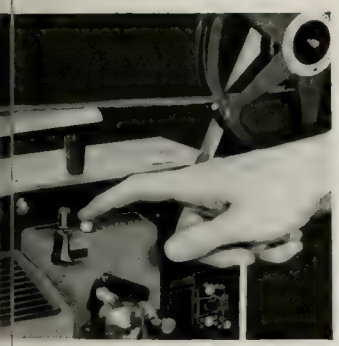
Bell & Howell engineering creates the most revolutionary 16mm sound projector in 25 years... different from top to bottom...inside and out!

look



THIS IS THE *NEW* FILMOSOUND *SPECIALIST!*



20% LIGHTER than any other major audio visual projector. It weighs only 29 lbs.! It is the first projector with a magnesium die-cast unitized frame—lighter . . . stronger . . . extra tough! It's easy to take along wherever it's needed. Your salesmen can present your film to more prospects. You'll get the added punch of professionally perfect sight and sound . . . as well as assurance that the customer gets all the facts . . . in the order that will make the most sales!

4% BRIGHTER than the average 16mm projector! new Proximity Reflector Lamp and new f/1.4 Super Proval Lens sharper images and more brilliant colors . . . a picture with h for the biggest meeting or convention halls—even in undark- offices or training rooms. And you can interchange 750, 1000 1200 watt bulbs and still get more light with each.

FAR, FAR EASIER TO USE with the most simplified controls ever put on a 16mm sound projector. It sets up from closed case to projected picture in a little more than a minute. Rewinding is fast and simple. You don't change reels. An automatic lower loop restorer keeps the film moving smoothly and quietly without interruptions. Your salesman is free to do his primary job . . . make the sale. His film presentation doesn't detract from attention, it focuses attention on your product!

e cool heads in business never forget the goal is profit. at's why more and more businesses are investigating, d investing in, a solid audio visual program. 16mm film vides a faster, more efficient presentation for sales, o orientation, training, time and motion studies, product mparisons and countless other specialized jobs. And s new FILMOSOUND SPECIALIST makes 16mm film en more practical than before! It will go more places d do a better job under more conditions than any other jector in the world!

EDITORIAL VIEWPOINT:

Memo to Government: Is the "Low Bidder" Going to Deliver the Film You Specified?

☆ Congressmen are being quietly armed with some sobering facts about present methods of awarding government film contracts. All over the U.S., bidders on government films are wondering how long this situation will prevail. Here's one typical example:

For a recent non-military film, scheduled for production in the Pacific Northwest, there were 50 bidders. Their prices averaged from a low bid of over $7,000 to a high figure of $80,000. The contract went to a Southeastern producer for the low bid in the $7,000 bracket.

But the general range of bids from $16,000 to $23,000 contained the true costs of this job. Obviously, the low bidder can't deliver that kind of picture. Obviously, the long travel distances involved will further penalize the quality of the work possible at that figure.

The American taxpayer will lose on this kind of logic; the Government involved is yours and mine. When that kind of arbitrary "take the lowest bid" decision is made, Government is getting just $7,000 worth of picture, unless somebody is making a patriotic contribution. We won't bet on that and we'd like to know why the bid of an experienced qualified company right in the area where this specific film is to be made was rejected, despite the fact that it was in the obviously correct range of *true* cost, indicated by the *average*.

Let the people who know the answers in Washington make the right decisions on these contracts. If their hands are tied by this kind of arbitrary *price-alone* factor, let's remember with this logic we'll also soon be buying missiles without engines, tanks without guns and films that could just as well be made with a home-movie camera for $70, much less $7,000, for all the good they'll do!

John A. MacCartney, Public Relations Director, Parke-Davis & Company (right) receives trophy from Edward Maher, NAM Vice-President.

Turin Festival Awards Are Presented to Parke-Davis; Kimberly-Clark; First Security

☆ Four trophies awarded to American motion pictures at the Second International Industrial Film Festival, held recently in Turin, Italy, were presented last month to representatives of the sponsoring companies. Edward Maher, vice president, National Association of Manufacturers, made the presentation at a luncheon at NAM headquarters in New York.

Roy Dickerson (right above) accepts special silver cup on behalf of First Security Corporation for their film "Frontiers" from Mr. Maher.

The Industrial Film Festival regulations permitted only fifteen entries from each national manufacturers association. The American entries were selected from a large group of business sponsored films by a committee of industrial audio-visual experts, including Frank Rollins, Manager of E. R. Squibb & Sons Motion Picture Department; Gordon L. Hoag, Manager of American Machine & Foundry Company's International Public Relations Group; and Eyre Branch, Standard Oil Company (NJ), retired.

In competition with films from 11 countries, Parke-Davis & Company's *Better Medicines for a Better World* took first prize as the best scientific research film. This film, produced by The Jam Handy Organization, is designed to show how medical research in the drug field helps mankind. The film received a special gold medal as the best film in the field of pharmaceutics.

The first prize in the category of training and sales technique went to Kimberly-Clark's *Faces and Fortunes* — a film created by Design Associates to trace the development of the "well planned corporation through the years.

First Security Corporation of Salt Lake City won a silver cup for its public relations film *Frontiers*. This film, made by Dick Ernst Productions, features the history and economic development of one of the last unsettled regions in the United States — the intermountain region of Utah and Idaho.

Eugene Levandoski, Eastern Sales Manager, Kimberly-Clark Corp., (right) accepts trophy for "Faces and Fortunes" from Mr. Maher.

Litton, Prentice-Hall Merge Teaching Machine Interests

☆ An international leader in business and education book publishing and a prominent manufacturer in the audio-visual field have joined forces to develop, produce and market teaching machines and related programs.

John G. Powers, president of Prentice-Hall Inc., and Charles B. Thornton, president and board chairman of Litton Industries, a new factor in the audio-visual field via its Applied Communications Systems Division, jointly announced the agreement under which Prentice-Hall will develop programmed educational materials for use with teaching devices. Litton Industries' ACS Division will design and build teaching machines whose cost and performance are optimized for the educational materials and the user intended.

Powers and Thornton stated several reasons why they feel the teaching machine has an important function in education.

"The college graduate of the 1960's and 1970's must enter his chosen field with a markedly greater fund of information . . . if he is to continue the projection of knowledge. The joint development of teaching machines and teaching programs holds great promise for acceleration of the learning process.

"This is especially true for those who must keep pace rapidly and thoroughly with developments in the many professional areas.

"We visualize these devices as helping to solve one of the nation's greatest problems — the insufficiency of teachers and school facilities brought on by the burgeoning school population."

Timely Public Affairs Series Announced by A/F Telefilms

☆ A special current events version of the popular public affairs series, *Your Neighborhood — the World*, is being offered to the television stations by Association Telefilms. The series, which has played on more than 100 stations, is comprised of a number of new films and "specials" dealing with contemporary news happenings.

Included in the 26-week series are: *Europe Without Frontiers* (the story of the Common Market), *Path to Space* (the Freedom 7 flight and its future significance) *A Child Across the Sea* (problems of a family that flees Red China), *The Conquest of Darkness* (a report on medical missionaries in Kenya), and *Across the Frontiers* (a journey on the Trans-Europe Express).

Your Neighborhood—the World features such commentators and journalists as Chet Huntley, Frank McGee, John Gunther and Norman Ross.

Hollywood Ad Club Gives Details of 1961 TV Awards

☆ The second annual West Coast search for the best of the year's television and radio commercials was launched by the Hollywood Advertising Club on Sept. 15. Official 1961 International Broadcasting Awards competition brochures were mailed to over 15,000 advertisers, agencies, producers, film studios, television and radio stations spelling out the categories and rules for entering commercials shown at least once between Dec. 1, 1960 and Dec. 1, 1961.

The 1961 IBA competition will cover 25 categories of television commercials as well as 15 classes of radio commercials, including a Sweepstakes Trophy for the best commercial entered in each medium regardless of category.

IBA television entries will be classified as follows: Live-Action, Animated Art, Combination — over 60 seconds, under 60 seconds, or 60 seconds (excluding ID's); Video-tape; ID's; Local-Regional; Station and Program Promotion, and special TV awards to include best in Cinematography; Animation Design; Direction; Special Effects; Sound; Best use of Color in animation and live-action; Best use of Music, and a Special Marketing Award.

The Marketing award, to be given in *both* media, was created for

CAN REPRIMANDS IMPROVE DISCIPLINE?

Slidefilm Gives Answer

One of the heaviest burdens of management is wise maintenance of discipline . . . while avoiding costly turnover due to employee resentment of supervisory methods. This slidefilm:

"MAINTAINING DISCIPLINE"

clearly defines the essential importance of discipline. It trains supervisors in the ability to handle the two distinct types: *Self-Imposed and Enforced,* with the proper techniques for use when reprimands are unavoidable. *The goal:* to build more efficient performance through all levels of organization. One of a tested series of eight sound slidefilms:

"SUPERVISOR TRAINING ON HUMAN RELATIONS"

widely used by management in many industries and service groups.

Write today for other titles in the series and details concerning a preview.

the 1961 competition. This trophy will go to the television and radio commercial with the best *specific, notable and traceable results in moving goods and services.* Local-Regional trophies go to commercials produced on low budgets or for use in cities under 10,000 population. This new category is to allow the commercial produced in a small town or the station, to compete for a trophy in its own class.

Television entries may be made in any language on 16mm or 35mm film or tape. There are no restrictions on entering commercials which have been entered in other contests or have received awards or recognition. "We do not intend to preclude from our selection any commercial," IBA chairman Ken Snyder emphasized. "We want to select the best, from among the world's best, in free, open competition."

Pylon broadcast antenna, rising vertically from arc of world, is trophy for winners of International Broadcast Awards.

At the same time, Mr. Snyder, chairman, announced the appointment of Robert Springer as chairman of the IBA Patron's Committee. Springer was, before moving to Hollywood, the executive director of the New England Region, United World Federalists, Inc. "IBA patrons will be sought from among firms and individuals who have a stake in the continued success of broadcast advertising," said Snyder in announcing the appointment.

IBA trophies and awards will be presented Feb. 13, 1962 in Hollywood. The deadline for entries in the 1961 competition is Dec. 1, 1961. Contest brochures are available from the Hollywood Advertising Club, 6362 Hollywood Blvd., Hollywood, Calif.

260 Films from 16 Lands at San Francisco Film Festival

"The Film As Communication" Competition and Conference has has brought 260 non-theatrical films produced in 15 nations and the U. S. for pre-screening and judging during the San Francisco International Film Festival this year.

Films produced for a specified purpose and defined audience will be pre-screened and judged in seven audience-oriented categories based on standards developed by the FAC Committee. The best of the 260 entries will be shown and given final judging during a program open to the public, November 9 through 12, at the Sheraton Palace Hotel.

Final judges will include Luther Nichols, West Coast editor of Doubleday Co., Irving Lerner and George Stoney, both well-known as producers of documentary and informational films.

In addition to the film showings the FAC program will include a series of three panel conferences with leaders from a variety of non-theatrical fields. The first panel, "Film As Communication," will discuss effectiveness and appropriateness of film use; the second, "Can I Get the Right Film," will discuss criteria dictated by different types of use and problems of availability, evaluation and communication between user-producer-sponsor.

A third panel, "Who Needs a Film Maker?" will ask for definitions of "producer" and consider the need for a producer's services, his relationship to sponsors and his various responsibilities. All panels will include audience participation.

For information on the FAC program, write Film As Communication, San Francisco International Film Festival, 172 Golden Gate Ave., San Francisco 2, Calif.

HEADLINING THE NEWS:

Niles Centers Provide Coast-to-Coast Operations as New York Studios Open

☆ The Fred Niles Communications Centers became a nationwide, coast-to-coast operation last month as the company opened motion picture production studios in New York City at 108 West End Avenue. It was the third full-scale film production facility for this growing company, complementing similar operations in Chicago and Hollywood.

The New York facility is in a five-story building and occupies two entire floors with shooting access to the other three. It provides Niles' organization with two fully-equipped stages, car drive-in entrance; recording studios and editing rooms plus offices for management, technical and creative staff members to round out the new Manhattan operation

Howard Henken, formerly a partner in HFH Productions, is in charge of the New York studios. With the New York opening, Niles is the first major motion producer to have three actual production facilities (not branch offices) in the three major advertising markets of Hollywood, Chicago and New York

"60% of our business is conducted with advertising agencies," Niles said. "By having an exclusive coast-to-coast operation, we offer a unique service. A New York TV producer can shoot in Hollywood, then complete his job in our New York studios. Though the agency deals with one account supervisor, he is backed by a national organization for creative and production support."

WASHINGTON FILM COMMENTARY

by Mary Finch Tanham

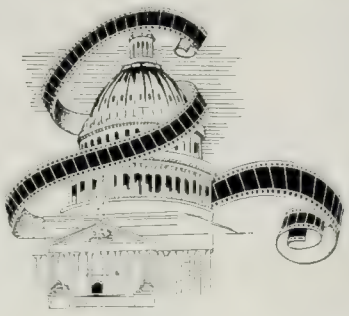
Washington Correspondent for Business Screen

AT A TIME WHEN it is even more important than it has ever been to present a favorable U. S. "image" abroad, CINE (The Committee on International Non-Theatrical Events) has announced unique plans for "pooling" America's finest films for foreign festivals.

Therefore, in the future, CINE will hold in abeyance for one year, films on every conceivable subject suitable for the big overseas festivals and for the many, new, specialized events which are cropping up all over the world.

Elect Flory as Chairman

This innovation was announced by John Flory, Eastman Kodak Company of Rochester, who was elected CINE chairman for the 1961-2 season at a recent meeting in Washington, D. C. At the same time, to implement these plans for extended coverage of film events, the Committee voted to include new members from labor, agriculture, church, science, and business.



As the official liaison agency between the American non-feature film industry and foreign festival officials, CINE has processed award winning films for the past four years. This year it is hoped that the increasing significance of the overseas fetes, in which the US competes with bloc countries, will be as clearly recognized in the non-theatrical motion picture industry as it has been in government and diplomatic circles.

"Warrants Serious Concern"

At the recent roundtable discussions in Washington, CINE members were told by Honorable Myron Cowen, U. S. Delegate to Edinburgh and former Ambassador to Australia, Belgium and the Phillipines, that the film activities of the iron curtain countries "must be neutralized", and that the "situation warrants serious consideration" by those in the industry.

In a frank appraisal of CINE goals, outgoing Chairman Ralph L. Hoy of Aluminum Company of America, stressed that today, as in the past, foreign officials are more interested in creative films of high cinematographic quality than in those with the obvious "message". CINE hopes to pool motion pictures which have these characteristics but which will not offend other nations nor give a false impression of life in the United States.

This year, 46 films were entered in the Venice, Edinburgh, Berlin and Stratford festivals. For the next season, the Committee has been requested to select films for showing at Venice, Berlin, Harrogate (England), Edinburgh, Vancouver, Mannheim (Germany) and Stratford (Ont. Canada). With

a large reservoir of versatile films, CINE hopes to enter many other new festivals in Europe, South America and Australia.

The deadline date for film applications has been set at December 31st for all films "released in 1961," and on March 1st for all films released in January and February, 1962. Application fees for CINE entry are $10 per film, and $30 for processing films for overseas festivals, when such films are selected to go abroad.

Five Named as Vice-Chairmen

Serving with John Flory as vice-chairmen will be James A. Barker, Capital Film Laboratories, Inc. of Washington, D. C., Stanley McIntosh, Teaching Film Custodians, New York, Eyre Branch, Standard Oil Company (retired) of New York, Brice Howard, National Educational Television and Radio Center, New York, and Ralph L. Hoy of Alcoa, Pittsburgh, recent past chairman.

New members elected are: Mr. Dana Bennett of the Farm Film Foundation, Washington, D. C., Mrs. Janet Wilkins of the National Association of Manufacturers, New York, and Reverend Michael Mullen, St. Johns University, Jamaica, New York.

Implications of Education Act's Extension Are Noted

. . . The extension of the National Defense Education Act, for which Congress voted a five million dollar ceiling budget per year for the next two years, may well bring about an increased demand on the industry for suitable films for the elementary school level.

At the present time, about 75% of expenditures under Title III, which provides for financial assistance for strengthening science, mathematics, and modern foreign language instruction, is being spent on science "equipment" (which includes films) for the secondary schools.

Many in Washington believe that the states, which match funds with the government, will put more money into desirable equipment for teaching mathematics and languages — as well as science — to *younger* children.

The primary effect of the extension on Title VII, Part A, will be additional prospects for research in certain areas which have not yet been probed.

Additionally, a stepped-up program in the dissemination of audio-visual information by the United States Office of Education to the state and local officials will probably take place in the next two years. USOE will concentrate more on "demonstration" methods to show such things as airbourne TV, the use of audio-visual instructional devices to teach certain subjects at certain levels, and the ways in "team teachers" utilize va media to their advantage.

One demonstration might for example, how several institutions of higher learning under contract, have hook together on micro-wave T share faculty resources and plore the effects of this o various schools' administr (which include a variety of e.g. state-owned schools, ch owned schools.)

In addition, it is hoped t "national library" of educa research information, electro ly controlled, can be set u service schools and univer Another project will be t semble one large publication ing kinds of audio visual m ials for educational pur which will be useful for sc states and business firms.

It is anticipated that the million dollars per year wi authorized for the next two years. To date $1.6 million spent the first year, $3.7 m the second, $4.7 million the and $4.7 million for the f and present fiscal year, w closes June 30, 1962.

Another Fine Product From ACMADE

AUTOMATIC BUTT SPLICER

Cuts, Splices, Applies Magic Mylar Automatically!

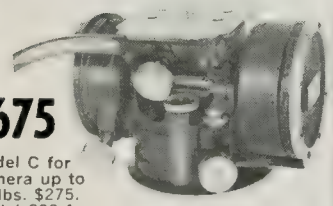
The first practical, speedy and efficient automatic splicer and perforated adhesive tape (Magic Mylar) applicator on the market. Now, with no fuss, mess or waste, it is possible to splice, repair, butt-splice, or strengthen splices on all types of film — positive, negative, magnetic—even duPont Cronar or other bases.

The cutting arm, shown in operating position, is used by pressing the chrome button for cutting both sides of the film simultaneously. The film, of course, has been registered on pins in the horizontal channel. The cutting blade is easily replaced when necessary.

The splicing tape is registered on precision pins and held in place until automatically applied to the film by swinging the arm over and pressing the chromed button. This action simultaneously cuts the adhesive and applied it—in perfect register to the film.

Model 35 for 35mm, Model 16 for 16mm—$295

NEW F & B MARK III FLUID DRIVE TRIPOD



The day of the friction head is fast coming to an end. More cameramen now use fluid drive heads **because** they meet the demand for smooth, continuous, easily-controlled action.

Complete outfit for 16mm cameras, 35mm Eyemos & Arris, at an amazingly low price. **$139.50**

Includes Tripod, Adapter and Visco-matic Fluid Head. With F & B's usual iron-clad guarantee.

Tripod legs only	$49.50
Baby tripod legs only	47.50
Fluid Head only	97.50
Leather & Vinyl case	12.50
Leather & Vinyl case for Baby	11.50

O'CONNOR *Fluid* CAMERA HEADS

$675

Model C for camera up to 20 lbs. $275. Model 200-A for cameras up to 200 lbs. $1750

MODEL 100

- Designed for use with 16 and 35mm. cameras with a total weight up to 100 lbs.
- Heavy duty professional model.
- Weighs 20 pounds. Dimensions: 7" high, 7" deep, 11" wide.
- Tilt from minus 75° to plus 75°.
- Camera mounting screw 3/8"-16.
- Equipped with precision bull's eye level.
- Available with Mitchell Standard, Mitchell 16, Pro Jr., Auricon and O'Connor "Level-head" bases.

Industrial A-V Exhibition's Useful Role

Well-Attended Show Closes 3-Day Run in New York

THE 1961 EDITION of the Industrial Film and Audio-Visual Exhibition closed a successful three-day run with good attendance in New York on October 11th.

Concensus of opinion was that this annual show has finally settled down into a useful service to users and makers of audio-visual materials and equipment on the New York scene.

Better Facilities at Barbizon

The locale of the exhibition this year — on the mezzanine of the Barbizon-Plaza Hotel — seemed to be a better choice than in previous years at the Trade Show Building. The Barbizon-Plaza also has a first-class theatre in which lectures, workshops and film programs were presented.

Coincident with the Exhibition, a continuous showing of outstanding films was held in a small screening room adjacent to the exhibition area. Those adjudged award winners were presented with silver cups at an Awards luncheon.

A Special Award was received by busily-campaigning New York Mayor Robert E. Wagner, for his "splendid cooperation with the film industry in New York."

Present TV Commercial Awards

TV Commercials Awards were presented to the following: A Grand Award to *Versatility*, a TV commercial by On Film for Alcoa and Fuller & Smith & Ross, agency. Live action First Prize: to On Film for Chevrolet and Campbell-Ewald, agency. Live action Special Prize: to MPO Videotronics for U.S. Brewers Association and J. Walter Thompson, agency. Animation 1st Prize: to Phoenix Productions for Mutual of Omaha. Animation Special Prize: to Goulding, Elliott and Graham for Millbrook Bread and to McCann-Erickson, agency. Live and Animation First Prize: to Paul Kim and Lew Gifford for Warner-Lambert and Lambert & Feasley, agency. Live and animation Special Prize: to Jerry Ansel Productions, for Hoffman-Laroche and Kastor, Hilton, Chesley, Clifford and Atherton, agency.

A Director's Award was given to Charles Dubin of MPO for his TV Spot for U.S. Brewers Association and J. Walter Thompson, agency. A Photography Award was made to On Film for a spot made for Alcoa and Fuller & Smith & Ross, agency.

Honors to Elektra, MPO

Top Special Effects' honors went to Elektra for their work on a Johnson & Johnson commercial through Young & Rubicam. A prize for Art Direction went to MPO for an American Tobacco-BBDO spot. And honors in sound went to On Film-Chevrolet-Campbell-Ewald.

A Special Award for a 30-minute network promotion went to Gerald Productions for a CBS-TV sponsored film.

Featured Speakers on Program

A lecture and workshop program held in conjunction with the exhibition featured talks by Stanley Turtletaub, Graphic Varieties, on *Filmstrip as a Means of Audio-Visual Comunications in Sales Training*; Robert Shoemaker, Charles Beseler Company, on *Psychology of Selling with Audio-Visual Tools;* Robert Grunwald, The Harwald Company, on *New Techniques for Evaluation of Film Performance;* and Richard Rogers, Modern Talking Picture Service, on *The XYZ's of Film Distribution;* among others.

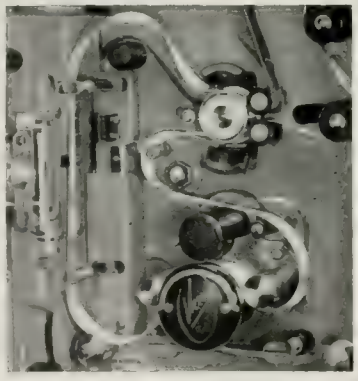
KALART VICTOR

BASIC in 16mm PROJECTORS



You Can Thread Any Kalart/Victor With One Hand Tied Behind Your Back

The unique Kalart/Victor "wide-open" threading path makes it possible. Film gate, tension rollers and film shoes open at the flick of your finger—and stay open while you insert the film. It's a one-handed, easy operation.

Threading is further simplified by the fact that this projector is loaded in three separate, logical steps. No intricate "lacing" is involved. First, loop the film around the sound drum, following the red path. Then thread the white path under the single drive sprocket. Third, follow the blue path through the film gate and over the drive sprocket. The color-coded path serves as a constant reminder of threading location and sequence.

An additional reason for using Kalart Victor projectors is the way they guard against film damage. Patented Safety Film Trips detect trouble and automatically stop the projector before any harm is done. A great feature for building projectionist confidence and saving film costs!

The Kalart/Victor offers great features in *every* department, from low-cost maintenance to outstanding performance. Ask your Victor Dealer for a demonstration soon.

Threading points on a Kalart Victor open wide to receive film; path itself is color-coded to show sequence and location.

Victor materials and equipment are approved for purchase under the National Defense Education Act.

Ross Addresses Detroit Ad Club; Shows Award Winners

☆ The Detroit Adcraft Club meeting on October 6th featured an address by Wallace A. Ross, Director of the American TV Commercials Festival, as well as a 45-minute film presentation of the 1961 Award Winners.

This was the last 1961 in-person presentation by Ross, who said that five 16mm versions of the award winners have begun a national tour of advertising clubs. Thirty-two scheduled bookings have already been set. Over 20 advertising associations have already featured the reel at special luncheons. The national convention of the Association of National Advertisers will feature a three-part screening of the winners at its convention at Hot Springs, Virginia on November 1st.

Within two weeks, the Festival will anounce the availability of 2700 TV commercials in the form of product category reels which can be booked by advertisers and agency creative and research staffs.

Entry forms and brochures for the 1962 Festival, which is scheduled for the grand ballroom of the Waldorf-Astoria Hotel in New York on Friday, May 4th, will be mailed soon.

"Our American Heritage" in Slidefilms

☆ Walter Knott, of the world-famous Knott's Berry farm in California and founder of that state's Free Enterprise Association is the man behind a new sound slidefilm series, *Our American Heritage*. The series was planned for use on DuKane's "Micromatic" sound slidefilm projectors. For a copy of the *Our American Heritage* program, write the California Free Enterprise Association, Ghost Town Station, Buena Park, California. And let's pray that there's nothing significant about that address for the free enterprise system.

GENERAL DYNAMICS NEW AUDIO-VISUAL CENTER IN ACTION:

—turn the page

Above: view toward projection room area in General Dynamics' Audio-Visual Center. Rear-projection screen of Polacoat-coated Plexiglas shown at left. **Right:** another view in the Center showing (left) sound absorbent walls and RCA color TV set on cart; Transpaque overhead projector is in background.

General Dynamics' Audio-Visual Center

A Highly-Functional Working Area Is Designed to Meet Company Objectives at N. Y. Headquarters

A NEW AUDIO-VISUAL CENTER has recently been completed by General Dynamics Corporation at the company's headquarters building in Rockefeller Center, New York.

Highly functional in design — a real working area in all respects — the Center will serve as a meeting room for management, a private projection room for viewing progress report films, a studio for production of still and motion pictures, a sound recording studio and a closed-circuit television studio.

Easily Set Up for Conferences

The Center is equipped with tables and chairs for a meeting room in its normal use, but these are fold-up portable and the room can be quickly converted for other uses.

Sheldon Nemeyer, in charge of audio-visual activities for General Dynamics Corporation, designed the room beginning in the middle of 1960. With long experience as both producer and user of audio-visual materials (U.S. Navy, Audio Productions), Mr. Nemeyer was ideally suited to fit his company's objectives into the completed Center.

General Dynamics had taken over the building — formerly the Time Life Building — in 1960, and Mr. Nemeyer was able to work almost from scratch in perfecting the ideal facilities to meet the corporation's needs.

The floors now occupied by General Dynamics were completely rebuilt — all partitions were torn out — so that the design of the Center was only limited by ceiling height and certain building supports. Construction began in November, 1960, and the major part of the work was finished in May, 1961.

Little Non-Functional Equipment

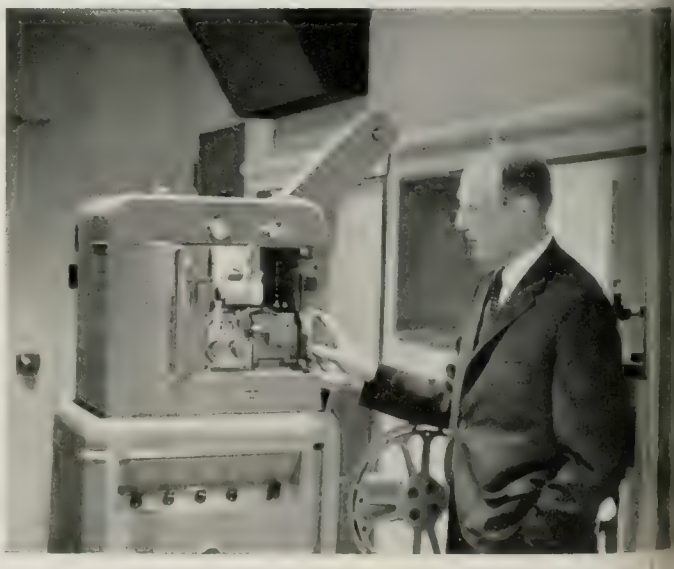
Although the amount of tools and facilities available for use in the Center is thoroughly complete, there is actually very little "expensive" equipment, and none which is non-functional. One outstanding feature of the room is a lavish amount of wiring. There are power, television and sound channels enough to meet all forseeable needs and spares beyond that. Mr. Nemeyer believes that the wiring you have to put in tomorrow always seems extravagant, but the extensive wiring you put in at the beginning during construction costs relatively little and is good insurance against future needs.

Nationwide TV Hookup

The General Dynamics' Audio-Visual Center feeds closed-circuit television cables to the Board of Directors' room, to other office spaces in the building, and to the Telephone Company's Central Switching Center in New York. Thus, it is possible to arrange closed circuit television from the Center to any part of the country, and theoretically to any plant location of the corporation's widely separated eleven manufacturing divisions.

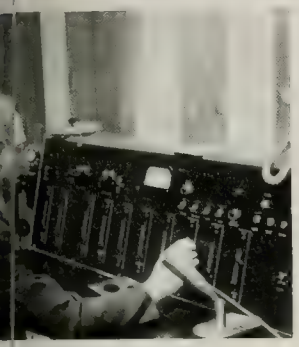
Other TV lines feed in signals from a master antenna and from other closed circuit facilities in the building. The Center has a TV camera on loan at the present time, and it has a color TV set which can be wheeled on its functional cart to any office in the building and plugged into the master antenna system.

All of this television activity can also be made available to the General Dynamics public display center on the first floor of the building. This area also has a projection booth and sound outlets which can be serviced from the Center.



General Dynamics, an important contractor in national defense work, is highly security conscious. The Audio-Visual Center h[as] special locks on all doors, el[ectron]ically operated, and a p[ush-button] switch operated from with[in the] studio-meeting room whic[h] connects all communication [lines] coming into or leaving the [room].

Quality in Sound, Project[ion]



Basic equipment in the [Center] includes a 16mm sound proje[ctor] (Eastman 25B), slide proje[ctor] (Kodak Cavalcade), overhead pro[jector] (Projection Optics Tran[s]paque), opaque projector (Bau[sch] & Lomb), a rubber mounted len[ti]cular front projection [screen] (Hurley), a rear projection [screen] (Polacoat coated Plexiglass) and assorted audio equipment (Som[mer]berg Carlson, Ampex, Rangertone, RCA).

The studio-meeting room [in the] Center measures 22 feet [by] 2[4]

Below: Sheldon Nemeyer with the Center's Eastman 25B 16mm optical-magnetic sound projector, always "at ready" in the General Dynamics' [Center]

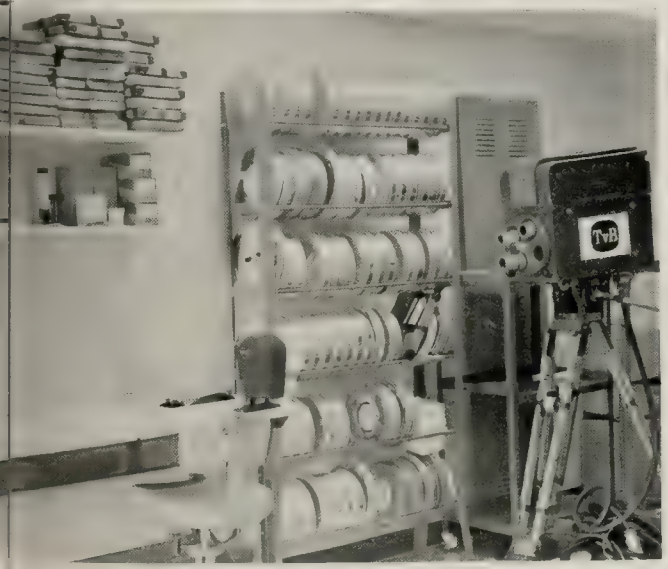
two microphones — one on floor stand and another on boom.

A magnetic chalk board is installed on one wall. Floor plugs and sockets are standard AC power, a special supply of 300 amperes for film production purposes, a "gong" to signal the projector operato, microphone sockets, and the TV sockets mentioned before. Three speaker systems are built into the wall.



On the Center's Sound Rack

Inside the projection booth are racks with FM tuner (sound can be piped practically anywhere in the building), amplifiers, and tape recorder with Rangertone pulse synchronization for synchronous recording of sound for film.

A console is equipped for any kind of mixing. The console is also able to put a signal on tape for automatic sound slidefilm production, and has provision for con-

The Behind-the-Scenes Story of a Missile-Tracking Network

The Western Electric Company Presents "A Voice for Mercury"

ONE OF THE MAJOR TASKS in sending a man into space is to keep constant track of him as he hurtles around the world, to talk to him, guide his progress and monitor the instruments in the spacecraft.

In the National Aeronautics and Space Administration's Project Mercury, this job was assigned to a five-company team headed by Western Electric Company and including the Bell Telephone Laboratories, International Business Machines Corporation, Burns & Roe Inc. and Bendix Corporation.

Global Facility Is Pictured

A new motion picture just released by Western Electric describes the complex communications system which this team has developed and put into operation. *"A Voice for Mercury,"* 14 1/2 minutes, color, produced by Audio Productions, Inc., shows the global network which will track and communicate with a man traveling in orbit at more than 17,500 miles an hour.

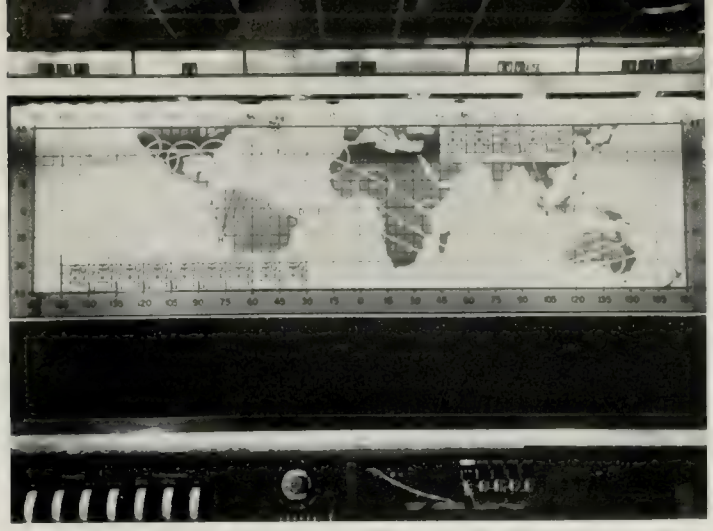
Under NASA's supervision, the plan was to string a belt of eighteen integrated tracking and communications stations around the world. The information that the stations would collect on the orbital progress of the spacecraft . . . about the physical and psychological condition of the astronaut and about the performance of the equipment . . . would be funnelled into the Goddard Space Flight Center at Greenbelt, Maryland.

Data Transmitted to Cape

Here it would be processed instantaneously by computers, and the data transmitted to a Mercury control center at Cape Canaveral, Florida. Scientists at the Cape would interpret the data and communicate with the astronaut during his orbital flight and, if necessary, bring him down from orbit before the scheduled time of descent.

When it was completed, the integrated system covered 60,000 miles. Along this global chain of stations, each link was joined to another by a communications sys-

Camel-back labor teams up with space-age electronics on remote Canary Island near North Africa.



tem, adding up to more than 140,000 miles of circuits.

Teletypewriter circuits covered about 100,000 miles. Telephone circuits stretched across 35,000 miles and high speed data circuits spanned some 5,000 miles. Almost every type of communications facility was employed to tie the network together.

Many kinds of radar and telemetry equipment were used, as well as the latest data transmission techniques and test analysis systems.

A Voice for Mercury contains dramatic behind-the-scenes shots of the nation's space program seldom seen on film. Some sequences were photographed at the actual ground communications and track-

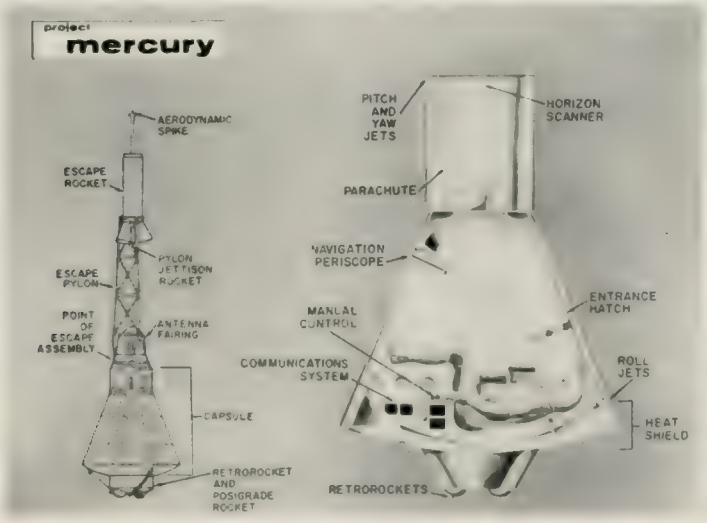
(CONTINUED ON NEXT PAGE)

Panoramic status board in Project Mercury control center at Cape Canaveral, Florida tracks orbiting spacecraft as it passes over each station.

(CONT'D FROM PRECEDING PAGE) ing stations in remote parts of the world. Some of this footage was procured from monthly film reports made by Western Electric for NASA.

In carrying out his responsibilities for production of these reports, Bob Perry, then with the Defense Activities Division (but now with Western Electric's Public Relations motion picture staff), shot some of the site location footage himself and delivered a 16mm Bell & Howell automatic exposure camera to the site manager of each of the stations on the global Project Mercury communications network.

The cameras, used by the site managers when needed, resulted in two or three minutes of useful sequences on the construction of sites in such out-of-the-way places as the Canary Islands and northern Nigeria in Africa.



The 16mm footage was blown up and color-matched into the 35mm Eastman color film by the Audio staff so that it blends perfectly. Release prints are in both 16mm and 35mm.

Distribution of this exciting and impressive motion picture started on September 13th — when NASA's Mercury "robot" man-in-orbit flight was successfully carried out. Bell System companies, which handle distribution of the film on a free loan basis to club groups and television stations, were able, in many cases, to supply the picture to TV stations as an up-to-the-minute public interest program that night and the following day.

Replacement footage for the film — which speaks of a successful manned orbital flight, will be distributed to the Bell System Companies on a stand-by basis pending completion of the manned flight which may be undertaken by the end of this year.

A Voice for Mercury was produced under the supervision of Western Electric Company's Motion Picture Bureau. Audio Productions' staff included [illegible] Frank Beckwith, writer [illegible] Boldt and editor John Ba[illegible]

The Mercury space capsule is graphically diagrammed to show control mechanisms and astronaut's position. Smaller drawing shows other components.

Young America on the March

"Holiday for Bands" a Tribute to Millions of School Musi[illegible]

SPONSOR: American Oil Company.

TITLE: *Holiday for Bands*, 25 min., color, produced by Parthenon Pictures, Hollywood.

☆ All over America, *ten million* boys and girls are taking part in the 25,000 school bands that echo within practically every elementary, high school and university building in the land.

They're something "extra" on the American scene, especially in the fall afternoons when their spirited maneuvers and marching cadence take the field at football stadia. The kids who play in the bands are a breed apart — on stage but not upstage — as they wear their brilliant uniforms with pride.

Answer to Juvenile Problem

And every one of them is a solid answer to juvenile delinquency, which is just a phrase to these earnest young people with their instrument cases under their arms and rhythm in their souls. *They* are the essence of *Holiday for Bands*, born of *reality* [illegible] happy a bit of inspired er[illegible] ment as there is on the [illegible] across the U.S.A. Americ[illegible] Company is sponsoring t[illegible] ture as part of its service [illegible] youth of America.

Story of Tri-State Festival

There's a strong pull to[illegible] viewers toward the ba[illegible] when *Holiday* hits the [illegible] among the nation's schoo[illegible] it's also a tribute to tho[illegible] played and won—or lost–[illegible] famed Tri-State Music Fes[illegible] Enid, Oklahoma where t[illegible] was lensed. The picture is' [illegible] documentary of the Festiva[illegible] but that doesn't stop it fr[illegible] ing a good story, a thrill[illegible] enactment of competition, [illegible] ing crowds and the drama [illegible] feat and of victory.

The story line takes a [illegible] real youngsters through the [illegible] meets-girl experiences at E[illegible] where their warm friendsh[illegible] ries through the events of [illegible]

The spirit of Young America is on the march as majorettes and m[illegible] step out for Enid, Oklahoma's famed Tri-State Music Festival parade. top: closeup of a champion in a scene from "Holiday for Bands."

i-bm's big day, climaxed by "illion Dollar Parade" where rred bands compete before rig curbside throngs.

ny Stewart Does Narration

hfilm is narrated by film star n Stewart. His comments t his rare participation in a s ed film bears repeating: N v-a-days, with all the talk t *bad* kids, I took pleasure a ating *Holiday for Bands* as o about *good* kids — work-

id view of Festival parade shown in American's "Holiday for Bands."

rching and playing together; n g, losing and just living. ad an industrial company s he same way strongly enough ke the film's circulation pos-

Stewart makes an admir- ommentator with his low- pproach and obviously sym- c understanding of the kids eir music. As an important s there are also some rous- sical numbers, recorded on tion.

Listen to These Numbers!

The "Stars and Stripes For- doesn't bring you out of r seat, wait for "Polonaise *and* "Semper Fidelis" or ng the Blues" followed by e Washington Post March," h of the Champions," "Dry ," "Dixie," "The Eyes of x" and the stirring "Grandio- arch." They're all played h the toe-tapping exuberance t hly young musicians can con- with such rousing abandon. *Holiday for Bands* has aroused nsiderable interest among band stors, music groups and music b ations as well as among elle delinquency authorities. The Honorable Roger Alton f presiding judge of the Con- icted Domestic Relations and Conciliations Courts of Los Angeles County commented:

"*Holiday for Bands* particularly appeals to me because it shows American youth in action, young people with a pride of accomplishment, a sense of belonging. As the narrator points out, 'a juvenile delinquency problem with *these* kids? Not a chance.' "

A Parthenon Film Production

This excellent tribute to "young Americans on the march" was produced at Enid and completed in Hollywood by Parthenon Pictures. Charles (Cap) Palmer served as executive producer and writer; the picture was directed by John E. R. McDougall; Jack Meakin was the music director. American Oil, as noted, is sponsoring nationwide showings of *Holiday for Bands* (with nary a commercial except the credit title) as part of the company's service program for the youth of America and is currently handling the distribution.

What America needs, on TV, in the theatres and out along the 16mm distribution lines, is a thousand more pictures like this one!

Freedom Awards Entries Due

☆ Motion picture entries from the field of factual documentary films, eligible for the annual awards program of the Freedoms Foundation, Valley Forge, Pa. (given in February, 1962) are due in November.

Write W. C. (Tom) Sawyer at the Foundation for entry forms. Films which carry a theme on "the American way of life" are eligible for Freedom Award honors.

Winners of Chris Statuette awards at Columbus Festival banquet included representatives of Lockheed Aircraft, Carson Davidson Productions, Coleman productions, British Petroleum Ltd., WBNS-TV, Ohio Bell Telephone, Coronet Films, Film Board of Canada, and U.S. Department of Agriculture.

Narrator Chet Huntley (center) discusses first development of Neoprene by DuPont scientists.

DuPont Film Starts Them Thinking About Elastomers

SPONSOR: E. I. Du Pont de Nemours & Company, Inc.

TITLE: *A Report on Du Pont Elastomers*, 28 min., color, produced by Audio Productions, Inc.

☆ This report is a thought-starter for technically-minded people in industry. It describes the important role of "elastomers" — a new word for rubber-like substances, both natural and synthetic — in modern technology.

Television newscaster Chet Huntley, narrator of the report, takes us back to a momentous series of events over 40 years ago when Du Pont scientists developed the first commercial man-made rubber — Neoprene. Since that time Du Pont has worked constantly to develop superior elastomers — now markets four: Neoprene,* Hypalon,* Viton* and Adiprene.*

Properties of the Four DuPont Elastomers

Each of these elastomers differs from each other chemically, while in Neoprene alone, the company makes over thirty different forms. Supplied in the form of small chips, Neoprene is used by rubber manufacturers to make products outstanding in resistance to weathering, common chemicals, flame, oil, grease, oxygen, ozone and abrasion.

Hypalon is very color stable and ozone resistant, among other properties. Viton is extremely heat resistant. Adiprene can be cast into molds, is resistant to abrasion and impact.

The film explains that Du Pont makes no finished rubber products, but works constantly with users of its elastomers to help develop new and improved products.

450 Elastomer Parts in Auto Body, Chassis

All four Du Pont elastomer types are used in automobiles — in body and chassis alone are more than 450 elastomer parts. The products also provide the basis for whole new industries: Hypalon is now used as a roofing material; Viton provides vital new parts in jet planes — seals, hoses and tubings for refineries; Adiprene is now used in textile machinery to replace metals subject to high abrasion.

Du Pont intends its research to continue to create new and better elastomers to meet the demands of the future.

Chet Huntley has a long part as narrator of the film, and does his usual highly professional job under the direction of Hans Mandell. Technically, the film demonstrates a very effective new technique of matting with A & B rolls — a method of superimposing one scene on another without going to expensive optical effects and many generations of printing.

"A Report on Du Pont Elastomers" was a feature at the fall meeting of the Industrial Audio-Visual Association in Wilmington on October 24th.

*Registered Du Pont Trademark

This animated wall outlet has some timely hints on home safety for viewers of "Just Plug It In."

Utility Companies Sponsor New Film on Home Safety

☆ An animated wall outlet that "speaks up" with the voice of Harold Peary, creator of the Great Gildersleeve, presents a novel and entertaining way of getting across the message of electric home safety in a new production sponsored jointly by six Eastern electric companies: Boston Edison Co., New England Electric, New England Gas & Electric, Western Mass. Electric Co., Conn. Light and Power Co. and Hartford Electric Light Co.

Making Electric Living Happy and *Safe*

Just Plug It In, narrated by the animated outlet with Peary's voice, goes into all the safety hints that assure electric home living the many benefits possible, rather than a hazard. Such items as frayed electric cords, the use of too many appliances in one outlet, the need for adequate house power and proper grounding of equipment are graphically covered.

Also shown in the film is the work of the Underwriters Laboratories in the inspection of appliances in one of their New York laboratories.

Included in the cast of *Just Plug It In* are, in addition to Peary, other well-known stars of television and Broadway: Nancy Lester, George Jones and Paul Larson. The production is the third in a series of safety films produced for the six electric companies by Bay State Film Productions. It joins *Electric Power & Common Sense* and *Cause Undetermined*, both winners of top awards in National Committee on Films for Safety Contests.

How to Obtain Prints of This Film

Prints of *Just Plug It In* are available from Bay State Productions, Inc., Box 129, Springfield, Mass.

NOTE: other "case histories" of current films appear on pages 18, 32, 33 and 40.

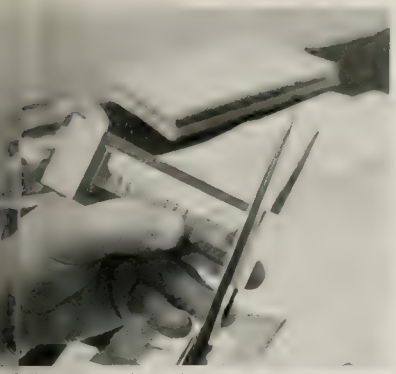
Mr. Connelly begins preparations for script visualization for showing to executives on company's overhead

How to Create Your Pre-Script Visualizat

ONE OF THE PROBLEMS IN pl slidefilm, or motion picture is gling script conference. Whil body in the company concerned wit technically — or esthetically — needs something about what the finished look like and sound like, often it is to achieve a meeting of minds becau one visualizes a situation differently.

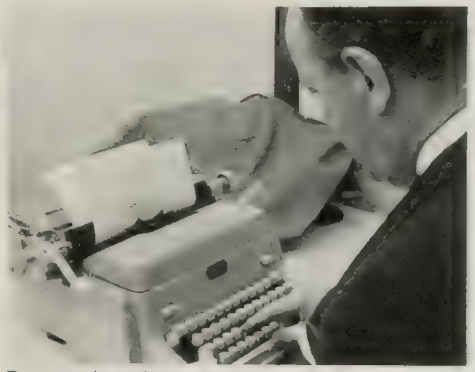
The *written* two-column script is many people to judge visually, and audio column often *reads* differently *sounds*. Thus, script decisions become a time-consuming headache than th need be.

The closer that script conferences ulate the final film the better. When can be actually seen and heard — e rough form — those concerned with ect will understand its content and great deal better.



One of the most efficient approach problem has been worked out by W Connelly, Assistant Advertising Ma Union Carbide Plastics Company, i of many audio-visual activities for t pany. Mr. Connelly produces slide a film presentations for his company and needs technical advice and marketi sel from a great many Union Carb people.

Before any film is finally approv Connelly has presented it in a dry ru screen — and completely visualized form.

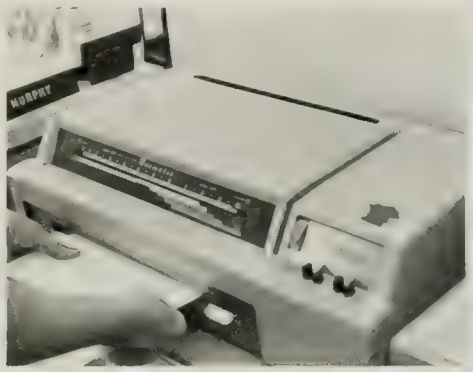


Mr. Connelly's technique is to visu film by rough hand drawings, clippin a great variety of sources, artist's ro typed material which can be quickly m transparencies on the Thermofax mac projected on a small portable overhe jector in sequence to a script reading recording.

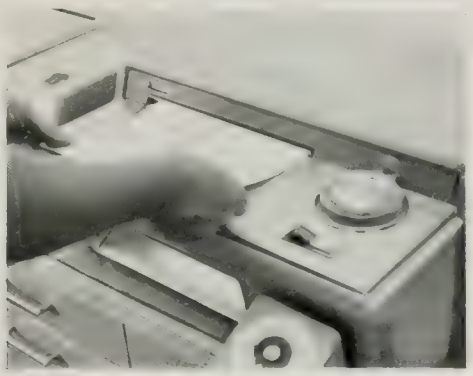
Script conference advisors now un film format and content much quic more thoroughly. It has been found t easy to make changes at the confer marking right on the transparency grease pencil, and obtain full coordinati out further time-consuming meetings.

Thermofax script visualizations ha used at Union Carbide Plastics for the months. They have proved to be a r to the company.

rid for "story board" transparencies may obtained from variety of printed media. llustration was cut from a Bakelite pamphlet.



Type titles for this pre-script visualization were made on a Royal typewriter which has special "bulletin size" display characters.

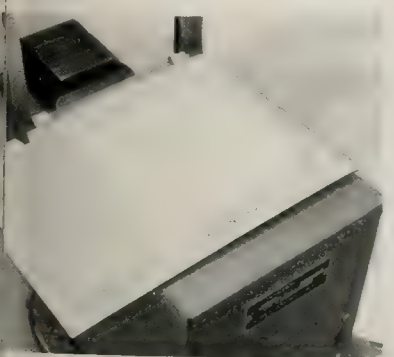


Then the "title" was cemented into position for the first step in completing the original for an overhead transparency . . .

lped illustration goes into position with- andard frame dimensions and this origi- ady to become an overhead transparency.

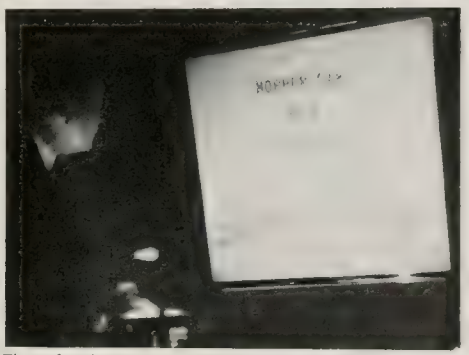
But, first, the original is placed in an Apeco copier to eliminate paper edges of original and to obtain contrasty, black-on-white copy.

Next, the Apeco copy is fed into Thermofax machine which makes either negative or positive transparencies. Dials regulate the contrast.



nnelly inspects finished transparency. x 5" transparencies can be made togeth- 1 2" x 11" piece of Thermofax material.

Mounting on Vu-Graph 5" x 5" frame is next . . . and it's a simple step that requires only a pair of scissors and some Scotch tape!



Transparency is "tacked down" at corners with tape. Vu-Graph mounts are inexpensive and are re-usable for future visualizations.

nnelly uses a Beseler Vu-Graph "55" d projector. It's light (16 lbs) and ansported where it's needed.

Below: the finished transparency is placed on the Vu-Graph projection stage and you're ready to show . . .

The finished slide is "on screen" and the whole process took less than five minutes. Cost of materials: only a few pennies . . .

Columbus sings to Queen Isabella of "Great Big Wonderful World."

Gibson Airlifts Dealers to Another Record Ye

Appliance Maker Rewards 5,034 Dealers for "Greatest Year, Ever" With Jet Holiday and 1962 Product Premiere Amidst a "Festival of Stars" in Panama

PRESIDENT W. C. CONLEY of the Gibson Refrigerator Sales Corporation told his company dealers this fall, "you've succeeded in making 1961 Gibson's greatest year, ever."

The occasion for his remarks was another of the Michigan appliance makers' highly-successful "holiday" sales conventions. This year, 5,034 Gibson dealers and distributors jet-streaked to Panama for the Wilding-staged "Festival of Stars" that climaxed the unveiling of the company's 1962 lines of ranges, refrigerators and air-conditioners. It's Gibson's annual order-taking time as well as a means of rewarding the dealer family members for sales achievement.

Giving dealers the "P's and Q's" about Gibson's 1962 features . . .

Something "Extra" This Year

Last year's happy "Hawaiian Holiday" was staged (also by Wilding) in Honolulu but the 1961 presentation wound up in mid-October with notable "extras" on the scoreboard as well as solid indications that Gibson's Greenville plant will break previous output records. Here's a couple of "dividends" worth noting:

To attend the 18 separate performances of the Panama convention, the 5,000-plus dealers traveled in Braniff International Airways' newest Boeing 707 Dorado Super Jet. Running up a total of 21,054,177 passenger miles, Gibsoneers participated in what Braniff calls the largest commercial airlift in the history of transport."

Braniff's Super Jet [illegible] from one of 28 cities in the U. S. each day for 35 consecutive days, providing dealers with a non-stop-over at Montego Bay, Jamaica enroute to their ultimate stay in Panama. The Jamaica [illegible] was another of those Gibson extras."

How to Make Friends A[illegible]

Still another "first" was achieved as Gibson demonstrated the goodwill potential of Air business by providing free transportation to 90 Latin American students to study visit the U. S., otherwise impossible because of the transportation co[illegible]

Hawaiian musicians and dancers remind Gibson dealers of islands' delights awaiting them in 1962.

And, at the finale, the dealers "sign up" to [illegible] plant's appliance output next year.

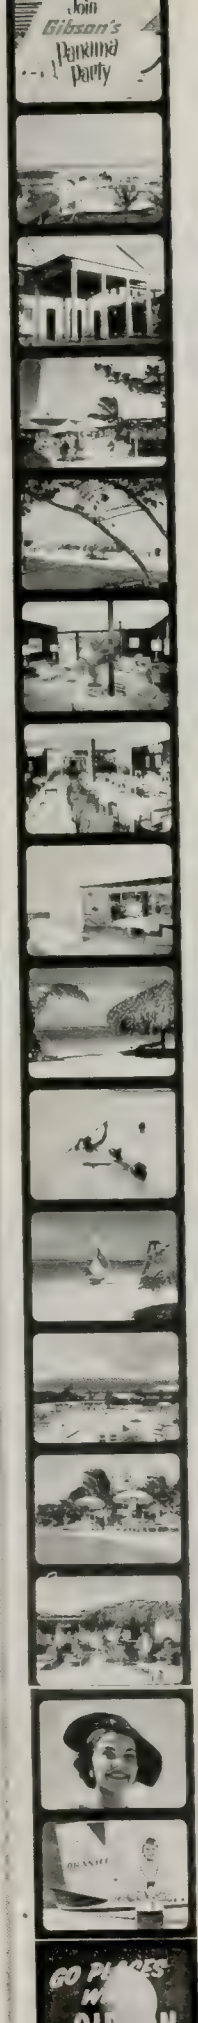
The El Panama Hilton was the setting for the "Festival of Stars."

Wilding music director Lloyd Norlin, using a large group of singers and musicians.

The visuals included appropriate Vista-Strip slidefilms (a Wilding creation), standard slidefilms and three wide-screen Cinema-Scope motion pictures. All showings were on *three* matched screens, with the widest center screen displaying the Cinema-Scope films. Wilding's Commercial Picture Equipment division had an airlift of their own, totaling 55 cases of stage and screen gear worth $150,000 to Panama and back. Paul Bowman supervised the near-perfect sound and projection presentations at Panama.



Building That "Extra Margin"

The Gibson show was replete with "extras" and well it should be for its main theme was that "Extra Margin" the company promised in dealer profits, potential and protection. Original calypso music and words echoed the "Extra Margin" theme. Skits pointed the dealer audiences into growing U. S. market potentials as one happy number depicted Christopher Columbus giving Queen Isabella the "business" in a prophetic song "Great Big Wonderful Land" that lead directly into a "Census Taker" bit that underscored the families who are doing without freezers and other Gibson appliances.

On to Las Vegas and Hawaii

The '62 Gibson presentation, teasingly unveiled toward the end of the Festival, was climaxed by the sudden entry of a troupe of 18 Hawaiian singers, dancers and musicians; onstage Las Vegas showgirls provided pulchritude and on the screen, an 8-minute color film on Las Vegas' attractions set the pace for '62.

Byron Keath supervised the show for Wilding's Show Division. It was scripted by Tom Byrnes, assisted by Tom Clark. *Very* live music at Panama was furnished by Lucho Ascarraza and his Panamanian troupe. The 1962 trek to Hawaii and Vegas brought a tremendous response from the dealers.

POST covers revolve on a center trylon as Bob Hills narrates . . .

POST SHOW

A Banner Event On the annual calendar of publication presentations is Bob Hills' traveling editorial promotion show for the Saturday Evening Post. This year — with a brand new Post to show — Hills also had more effective visuals than ever before to match his always appealing platform presence.

Called *Revolution by Design*, the colorful and dramatic stage presentation, produced by Visualscope, Inc., tells the story of the development of the new design of the Post. It traces the evolution of the new magazine beginning with the clean white pages with which the editors were to create the dummy.

"New Adventure in Reading"

Their objective: "to build on the great strengths of the Post, create a magazine with more intense readership, provide more urgent reading appeal to youth, and, weekly, with each issue, to offer a great new reading adventure."

To achieve these ends, the leaders in the world of letters, design, illustration and photography were enlisted. A new cover, logo, layouts, new departments, design, art and photographs were studied, considered and eventually adopted along with a new type face and especially developed paper and printing process known as "Deep Value Reproduction."

Hills takes his audience, through the use of an intricate electronics control board and especially built panels to simulate actual Post pages, to visit such diverse people

(CONTINUED ON NEXT PAGE)

VISUALIZING THE POST'S FORMAT:

(CONT'D FROM PRECEDING PAGE)

and places as Bob Newhart at Philadelphia, Casey Stengel at his California home, Robert Preston and Shirley Jones at the River City, Iowa, set for *The Music Man*, the Broadway musicals *Carnival* and *Donnybrook*, then to the shores of Plymouth, Massachusetts for a glimpse of the Mayflower and to the South Pacific island where President Kennedy's PT boat 109 was sunk.

Equipment by Wilcox-Lange

Backstage at the new show is much of the same basic equipment, designed by Wilcox-Lange (Chicago) that has been used to such advantage in past POST presentations. There is the master console which controls the numerous circuits employed, projectors, lights and sound systems, but this year there are more circuits and more elaborate devices than ever before. It takes a good-sized tractor-trailer to transport the show.

Hills starts out with dozens of POST covers moving across the three wide screens. He stops them at will, comments on this or that particular one, and on they go. This effect is achieved with three special triple-frame 35mm slidefilm projectors with crawl devices. The projectors were supplied through the courtesy of Eastman Kodak.

Has Direct Control of Show

Hills goes through his complex routine controlling all devices from a cord and switch up his sleeve, but if anything should ever go wrong with this connection he is still safe — he has a goof-proof crew of two, with intercoms, who can, if necessary, scurry about and turn on and off the machines manually. Luckily Hills hasn't needed them yet.

Along with his crawl projectors Hills also has traveling sound on four speakers placed around the room. He plays catch with Casey Stengel. He steps backstage and into the motion picture for a trombone session with *Music Man* Robert Preston — then comes back on stage live — with the trombone.

Revolving Center Panel Trylons

The set for the presentation consists of two 10 by 18 foot side panel screens and a center panel consisting of four 5 by 10 foot trylons, which revolve individually revealing the new POST. The intricate control console has 16 separate channels and permits automatic operation of four slidefilm projectors, sound systems, stage lights, crawl devices, and 35mm Cinemascope motion picture projector. Two tons of equipment (plus a large exhibit of editorial and advertising "firsts" in the long history of the POST) are used for the presentation, which has been shown in 27 major cities throughout the country.

EDITOR'S NOTE: continuing feature articles on how America's leading magazines and other media are using audio-visual tools will appear in forthcoming issues.

The Post's Promotion Director, Bob Hills, works in front of three wide-screens in this scene but he also "plays" directly into projected scenes.

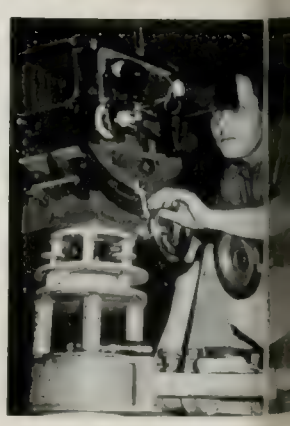
The ensemble in the opening scene of the 90-minute 1962 Ford int[roduc]tory filmed dealer presentation. It's a gay, wake-up and watch audien[ce-get]ter.

The Ford Show's "Got It Ma[de]

40,000 Ford Dealers and Salesmen See Division's 62 [mod]els in a Lively, Tuneful and Star-Studded 90-Minute Col[or] Fi[lm]

THE FORD DIVISION took the road this fall to again present its 1962 line of Ford cars and trucks to its nationwide dealer family with another spectacular 90-minute color motion picture that sparkled with stars, pretty girls and top-quality production.

This year's Ford show, *Got It Made*, featured Harpo Marx and Mickey Rooney in starring roles with support from vocalists Louise O'Brien, Eileen Rodgers, Paula Stewart, Ann Vivian, the Little Dane & Mason trio and comedian Arnold Stang. The show was again produced by MPO Sales and Training Programs, a division of MPO Videotronics, Inc. — and many weeks of preparation, planning and casting preceded the painstaing detail of professional production which illuminated theatre-screens during its coast-to-coast tour.



Over 40,000 Ford dealers and their salesmen packed major houses in 36 cities following the show's gala premiere on August 21st in Ford's own Glas[s Ho]use Theatre in Dearborn, Mi[ch.] pictures on the facing pa[ge] *Got It Made* from those ea[rly] of planning and rehearsal [to] final, colorful picture that [rou]salvos of dealer applause.

From opening curtain, [the] Ford show was obviously [treat]as a vehicle for new mo[del] play. Each sequence, ev[ery] morous touch, obviously [pins] the main theme but entert[ains] gets and holds rapt attenti[on] the dealer-salesmen audie[nce] whom intended.

Duo-Pic Helps York Premiere Line

Slides and Motion Pictures Are Combined in This Dealer Presentation

FOR SLIGHTLY MORE than its original cost, an average slide presentation can be transformed into a "spectacular" by using a good technique that combines the best features of both slides and motion pictures on a single screen.

Called "Duo-Pic," the process has been developed by Carter & Galantin, Inc., an Atlanta, Ga., producer and promotional organization. It automatically correlates slides and motion pictures shown from separate projectors, simultaneously, on a wide screen or two screens standing side-by-side.

Slides Emphasize High Points in Show

A presentation, which is 70 percent slides and 30 percent movies, is much more effective in some instances than a 100 per cent motion picture offering, according to Henry Carter, president of Carter & Galantin. Yet, the production costs are only slightly more than a slide program alone, and considerably less than for a full motion picture.

For example, a product can be shown on one slide, produced at a nominal cost, for any length of time less expensively than if put on 20 to 30 feet of the more expensive motion picture film, Carter explains.

The Duo-Pic method features a standard slide projector, which automatically advances 35mm slides, and a standard motion picture projector beside it. The two are connected by a synchro film interlock cord.

30/50 Cycle Note Activates the Projectors

The sound track of the motion picture has an inaudible 30 50 cycle tone that activates the slide projector when the signal is transmitted. The device permits just the motion picture to be shown, both the movie and slides or the movie can be stopped, leaving just the slide on the screen.

The technique was devised by Todd L. Owens, advertising and sales promotion manager of the York Corporation, subsidiary of the Borg-Warner Corporation, York, Pa., a manufacturer of air conditioning equipment. It evolved after a debate as to whether a slide or motion picture presentation would best be suited to introduce a new line of residential, commercial and room air conditioning systems to the firm's 5,000 to 6,000 dealers across the country.

Two-Fold Objective for Duo-Pic Problems

York utilized Duo-Pic to attack two problems: First, the firm naturally wanted to hold the dealers' attention and win their support and that of their salesmen. This can be a difficult task inasmuch as most dealers handle several lines and attend a number of distributor's meetings in a comparatively short time.

Second, both dealer and salesmen had to be educated in the ways of selling, without being offended. For example, they had to be shown that it is not always profitable to sell an item by price alone.

York solved these problems by using the company trademark, "Yorkco," a polar bear, animated on slides. Meanwhile, the "salesman" was on the movie screen.

Yorkco and Salesman "Team Up" on Problems

Confiding in "Yorkco," the "salesman" described two typical, knotty sales problems he faced. Then "Yorkco" analyzed the problem and got the "salesman" to work out the solution. Significantly, neither talked down to the audience.

Using fadeouts that left "Yorkco" or the "salesman" alone on the screen or talking to each other from movie to slide, York was able to make the audience a third party to a believable situation without seemingly ing them as if they were apprentice s

"Duo-Pic was new and refreshing," reports. "The use of two screens a cally kept the viewer interested. It el the need to concentrate on one spot, ways tends to make people drowsy. combination of film and slides gave a of pace to gain even greater attention.

Set-Up Ideal for "Before-After" Ap

Duo-Pic's physical set-up made it show "before and after"; how not, a to. "The bear," Owens adds, "became hicle to interrupt a poor selling appro then instruct on the proper sales a without being obviously critical of ar the audience.

"The incorrect sales approaches w lievable and brought experienced from the audiences. Backed up with t to' via the bear's example, they gave thought," Owens explains.

He also points out that, although t entation cost less to produce than film, it "gave the impression of being costly production."

York ordered 100 prints of the 22 "spectacular." Although the originals color—16mm Ektachrome Commerci 7255—the prints, made by George burn Laboratories, Chicago, were bl white positives. The slides were shot o Ektachrome and reduced to 35mm.

The presentation was part of a kit distributors for $100 each. It was s about 100 dealer meetings within 3 days after York's national convention.

Programs Varied for Different Produ

Actually, three different productio made, but the formats were similar. troduced a new commercial air cond system. Another dealt with central re air conditioning, while the third was ge the dealer of room air conditioners.

Owens says the results were gratifyin different approach in dealer meeting sulted in our selling 25 per cent more distributors," he notes. In the past, th house approach was common pract most York distributors.

The effect on dealers was reflected per cent increase over previous years ders for sales demonstrators used in th

J., selling agents for General lopment Corp., developers of huge Port lotte, Florida, homes and sites.

A convincing film is a formula for sales suc- " says Mr. Perl. "From experience, we w films sell. Any of our salesmen can show Port Charlotte film to anyone, anywhere, at time, and produce leads. And because it's ed, the presentation is never diluted, always ectly duplicated, always successfully the same, whether shown in Bangor or Kokomo.

"This film program gives us another bonus: an enthusiastic sales force. Salesmen know that to *show it* means to *sell it*. So they eagerly pack equipment and show it. We are careful that the equipment we give them guarantees a smooth-running performance."

Mr. Perl's firm owns 60 Kodak Pageant Sound Projectors. They have made approximately 6000 showings in the first half of 1960 without a single projector mishap.

"Our salesmen aren't mechanics," Mr. Perl continues. "Their projectors must be easy to set up and operate, without a hitch. They must have a projector that doesn't get in the way of their presentation. And these Kodak Pageants fit the bill."

If you would like full details about Kodak Pageant 16mm Sound Projectors, tear out the coupon and mail it today.

"Beargrass Creek" Pictures Fight on Water Pollution

. . . Beargrass Creek is a tumbling stream that cuts its way through the rolling hills of Kentucky. Like other tributaries of the Ohio — and like streams everywhere — it *offers* the promise of an abundance of clean water. But like so many waters in our nation today, it has a split personality; the creek is clear and fresh in the open fields, but foul and polluted where it skirts the edges of urban life.

Happily, Beargrass Creek won't be full of raw sewage and industrial waste for long — for the Ohio River Valley Water Sanitation Commission (ORSANCO) has enlisted the aid of eight and a half million citizens in eight neighboring states to do something about water pollution in that region.

They've gone a long way, already, and they've documented their progress in a frank, colorful report, titled *Beargrass Creek*.

This 20-minute film will be an invaluable tool in the hands of progressive business and community leaders faced with disagreeable sewage problems which can no longer be ignored. Its message is convincing. Its photography is superb. And it is aimed directly at

city fathers and responsible citizens who may be dragging their feet over the cost of modern treatment facilities — but who cannot fail to realize that clean waters are good business.

ORSANCO will distribute the film throughout its member states; other prints are available from Stuart Finley, Falls Church, Virginia, who produced the film and who has gained the reputation of being a crusading consultant for healthy rivers. The script was by Ralph Burgin, and camera and editing by Theodore W. Jones.

Scene in "Beargrass Creek" shows a torrent of sewage pouring into an Ohio river.

New Interior Dept. Films Show Water Resource Needs

. . . When President Kennedy delivered his special message to Congress last February regarding the need for public action to save America's wealth of basic resources, the ideas for several films were born in the Department of Interior.

Now, Dwight Rettie, Information Officer for the Bureau of Land Management, announces the completion of *Watershed Conservation*, an 11-minute sound and color film about the need to save valuable water resources on the national land reserve. This 16mm film stresses the point that now is the time to do something about protecting the country from flood, erosion, pollution, and water shortage.

A second film, in the script stage at Coe-Peacock, Inc., Washington, D. C., has been tentatively titled *A Matter Of Concern*. It will be a 28 minute color film, directed to the 180 million Americans who are, in the long run, responsible for protecting our natural resources.

* * *

NEA's Pre-School View

☆ The National Education Association, Washington, D. C., has selected Vision Associates, New York, as producer for a new documentary film dealing with the kindergarten child. The film will deal with the role of the kindergarten in terms of the child's development and will be directed to the general public.

Helen Kristt and Lee Bobker will produce and direct the film, which will be ready for release early in 1962.

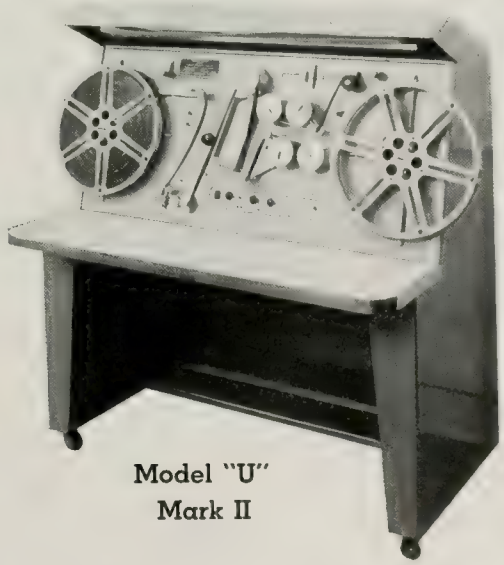
THE HARWALD COMPANY Salutes STERLING MOVIES, U.S.A.

on adoption of the Model "U" Inspect-O-Film and their new concept of "Certified Inspection"

KUDOS to Sterling Movies U.S.A. for your recent acquisition of the latest electronic film inspection equipment . . . the Harwald model "U" Inspect-O-Film equipment now being added to your film library operations. We salute you, not only for the added benefits that Certified, Top-Quality film inspection brings to your sponsors and film users, but also for leading the way to 100% quality programming!

Why is this so important to your company and to ours? Because progressive managements everywhere are seeking better and more economical ways to serve their growing film audiences. We at Harwald pride ourselves on our Research Program that has initiated an important forward step in making every film showing a trouble-free, rewarding experience.



We at the Harwald Company have made it our exclusive business, for over 15 years, to research all phases of film handling problems. First to provide the industry with all-electronic film inspection, we have also pioneered in film splicing methods, film cleaning and conditioning solutions and, finally, in the most advanced electronic equipment for applying and using these methods.

There's a Harwald item for every phase of film library operations, including such essentials as film carts, cabinets, projection stands, etc. And there are now SEVEN custom variations of automatic film inspection equipment of which today's advanced "Model U" is the ultimate.

That is why PROFESSIONALS like Sterling Movies U.S.A. look to Harwald for leadership for the ideas and methods that produce the best in film handling. Sterling's own program of research, fortified by the Model U, is giving sponsors of today's fine color films the best in electronic scratch detection, the most efficient means of delivering an original, true print of the picture to the screen!

Want the same for your library? Just WRITE, WIRE or phone COLLECT to MR. SALES at HARWALD.

*Certification means a set of standards of film condition set by leading libraries like Sterling Movies U.S.A., together with Harwald Engineers. It includes accurate detection of film defects that cause faulty projection . . . defines true-quality film inspection and service . . . includes a program of upgrading print quality by eliminating torn sprockets, detecting scotch tape on splices . . . assures splice quality and scratch protection.

Ellsworth Dent . . . wins award

Kansas State College Honors to Coronet's Ellsworth Dent

☆ Ellsworth C. Dent, vice-president of Coronet Instructional Films, is the recipient of an Alumni Award from Kansas State Teachers College in recognition of his contribution to audio-visual communication.

Dent pioneered the establishment of film distribution centers at the University of Kansas and at the Brigham Young University. He set up the first 16mm film distribution rental library at the University of Kansas in 1926. This first library was the forerunner of the now more than 100 such libraries in the United States.

Author and Government Pioneer

He is the author of THE AUDIO-VISUAL HANDBOOK, one of the first definitive volumes in the field, originally published in 1934 and released in subsequent revisions. As publisher of VISUAL INSTRUCTION NEWS, an early audio-visual journal, Dent brought audio-visual information to educators on a regular basis.

Dent helped to develop a pattern of proper use of audio-visual material in government and established the division of motion pictures under Harold Ickes, secretary of the interior during the Franklin Roosevelt administration.

Active in Industry Affairs

For several years he was an active member of the education-legislative committee of the National Audio-Visual Association and has been chairman of that committee for five years. He has also been a member of the Board of Associated Exhibitors, National Education Association, formerly serving as a vice-president and in 1959-60 was president. Dent is now a member of the nominating committee and the joint AASA-AE committee.

Loyola, Los Angeles, Builds Communication Arts Program

Loyola University of Los Angeles has embarked upon a broad range academic program for television, advertising, journalism, motion picture and radio writing.

The program includes an undergraduate sequence leading to a bachelor of communication arts and a graduate curriculum leading to a master's degree. The department will be housed in a $900,000 Communication Arts Center, a three-story structure designed by Architect Edward Durell Stone, creator of the American Pavilion at the Brussels World's Fair and the American embassy in New Dehli.

Included in the Center's facilities will be a 242-seat indoor theatre, a 200-person-capacity roof garden theatre, television studio, an audio-visual distribution center for on-campus TV broadcasting, rehearsal and seminar rooms, a news and advertising section, and 40 faculty offices. Regent Edward T. Foley is the principal donor of the facility.

The new courses will still be based on the liberal arts tradition, which places emphasis on writing and particularly writing in the popular mass media. The undergraduate program, slated to begin this fall, will consist of a general application to the techniques of the various media. At the graduate level, scheduled to start in September, 1962, the student will concentrate on one medium.

Jack K. Massard, as director of communications, is in charge of coordinating the various aspects on the new program.

How to Plan a Film: Select a Produ

Crawley Commentary Provides Guide-Lines for the Sp

☆ Graeme Fraser's CRAWLEY COMMENTARY, the newsletter of Crawley Films Ltd., Canada, always interesting to us, gives some potent pointers on film production planning. Here are some useful steps as outlined for *your* approach to that new film:

First, think through and put on paper the answers to five basic questions:

1. What is the message to be conveyed?
2. Who is the message for?
3. What should the audience do about it or how should it make them feel?
4. Is a film the best medium to accomplish this purpose?
5. Is now the time to make it?

Next comes the selection of the producer, made on seven bases:

1. What broad general experience has he had in film making?
2. What specific experience has he had in the area of my film (medical, safety, PR, training, animation, etc.)?
3. Does he have all facilities or will he be sub-contracting many phases of my film, thus spreading the creative responsibility?
4. How stable is he financially? Can I be *sure* he will be in business to complete my film?
5. Do his functionally-targeted films also 'happen' to win awards?
6. Does he have a record of repeat business from sponsors similar to us?
7. Can he show me films I wish we had made?

Having selected the producer, lean heavily on his experience and advice. Try to give him enough *time* to do the job without rushing, enough *budget* to do it without scrimping. Also have a budget for sufficient prints and for promotion.

Assign *one* person to act as liaison with the producer and tell him to take direction from no one else. If necessary, also give him a technical advisor.

Plan distribution and promotion before the film is completed. Finally, before running all prints, have one or two 'sneak previews' before audiences of the type for which the film was designed. ☆

SIC in the BUSINESS FILM

h Jack Meakin, *President, Jack Meakin Enterprises*

s is certainly one of the rst abstract of all art forms. nng, or a piece of sculpture, ook are abstract only until mpletion and then they nquite tangible . . . a conoject which can be seen and

usical composition, even mpletion, is still an abic until it is performed and nd we find this abstract laying a specific and a ole in industrial motion e.

& Functions of Music

rust perform its definite o in the total sound track he functions may be classix general headings:

T establish mood . . . not fo particular scenes, but the ll mood of the entire film. us of the "underscore" is the iportant function of music fin. It not only establishes tin mood, but also gives a an cohesion to whatever acs aking place on the screen.

T establish locale . . . the cristic drone of a bagpipe s lou in Scotland considersoner than the scene of the s Moor.

T change locale or indicate lse . . . either one or both e together can be accomcpy music in one fell swoop ipredibly short time.

Fr punctuations . . . music aable as the punctuator in d notion pictures. The fast tier takes a spill . . . the c its a "stinger" as he hits rand, and then builds sus- hile we find out how badly lrt.

Br specific rhythmic effects prtically every moving thing nae a specific rhythmic musical effect to enhance its action . . . *but*, if these rhythmic underscores are used too often and too much in a picture, they lose their effectiveness. Only those action scenes which best lend themselves and which actually call for specific rhythms should be so scored.

6. For subtle sound effects . . . at times music can take the place of actual sound effects in a film . . . *but* don't ever use music where the actual sound effect is better, and it is usually advisable not to use music and sound effects at the same time when dialogue or narration is fairly thick. The audience cannot absorb all that is going on and the words suffer.

Let It Be Heard, Not Seen

Film music in general should be heard but not "seen," which means if the music is too loud, or too obvious, it is a detriment rather than a help to the picture. If the right kind of music is used for a valid, logical reason in the right place in the picture, it follows that the music score will be right. I have always suggested setting up the music for a film in three steps:

a. From the shot list for preliminary blocking out in sections of themes and underscore ideas.

b. From the script for further indications of mood and relationship of music to the words.

c. From the completely edited picture itself for final setting and the relationship of music to action, words and sound effects.

This Is Music With Purpose

Everything I have said about film music in general applies completely to music in the business film with *one* important exception: Business film music is not music; it is, rather, music with a purpose . . . a business purpose.

First of all, right from the beginning of the main title, music must establish importance (which the client expects and deserves) without being too pompous, and the general mood of the whole picture should be established.

Business films are primarily commentary rather than live action with synchronized dialogue. Therefore, the music has quite a different job to do. It must take the place of the screen action and dialogue. For good contrast it is generally advisable not to underscore synchronized dialogue except in specific cases.

Business film music must also

FILM MUSIC:

(CONTINUED FROM PAGE 49)

create movement where no movement on the screen exists. It must tie subject matter together and even "remember" for the viewer previous scenes which refer to the one on the screen. Hence, the use of recurring themes is of great importance.

Don't Intrude on Picture

Business film music, along with these specific functions, must also be "nothing" music . . . to underscore long sections of rather dull establishment or description which are a necessity in a great number of business films. "Nothing" music is certainly the hardest to come by. It can't be too sweet or sticky, nor can it be too busy, or brassy or sweepy . . . if so, the music detracts from the words which are important to make a point for the sponsor.

Budget restrictions on the majority of business films preclude the expenditure for individually composed and recorded scores, thus, most of the business films being produced today are scored with library music tracks. Such a score is cheaper and there are no problems with usage rights; however, there are some difficulties. There are quite a number of music libraries, but some of them have certain limitations . . . one may be loaded with adventure music, but very little romantic or dramatic music.

Rates Capitol Library High

I found during the last few years that Capitol Records Hi-Q Library has one of the best selections of all types of recorded music for business films. Along with all their music designed for the TV market, they have concentrated on building up a fund of good selections (including "nothing" music) appropriate for industrial and business films of all kinds.

Capitol has gone a long way to alleviate the difficulties of the "track" music supervisor and the music license they grant provides maximum protection for the user.

Now comes the most restricting and, I might add, the most frustrating procedure . . . fitting the music tracks to the picture. Only once in a blue moon will the music cue be the correct length for the sequence under which it is to play. So it is up to the music editor to start cutting, tucking, hemstitching, plaiting and shirring to make it fit.

Fortunately, the Moviola Company has developed a new machine with a "scanner" . . . a device on which the sound head travels up and down the stationary sound track. By means of moving upper and lower cut-off switches, the sound on the track can be pinpointed down to one frame.

This improvement has made it possible to increase not only the accuracy but also the speed of editing. After the complete voice, sound and music tracks are finally edited, comes the dubbing session.

Increases Speed of Editing

This is one of the most critical operations in all of picture making, and a million things can go wrong. All the months of writing, producing, shooting and editing can fly right out the window if the dubbing is not right. But after a few dry runs everything seems to smooth out and the composite sound track (the "compo") has been made. The next step, of course, is merely to print the composite track along the cut negative and the picture is all finished. Thank the Lord!

Kodak to Manufacture, Sell Magnetic Recording Tape

Eastman Kodak Company has announced that it will manufacture and sell magnetic recording tape, beginning later this year.

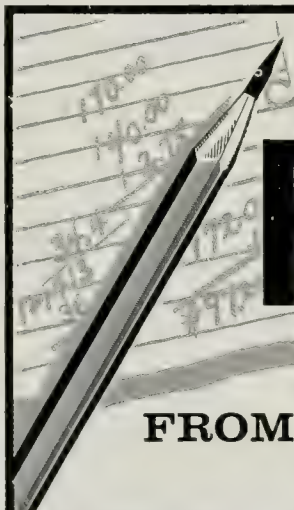
Entry into the magnetic tape field is a new but not unexpected step for Kodak, company officials said. Kodak's French associate company, Kodak Pathe, has been producing and selling quality tape abroad for more than twelve years in a program that has been backed by extensive research and development in France a[nd] in K[o]dak's Rochester, New Y[ork] oratories.

Kodak magnetic tape will be supplied for professio[nal] amateur sound recording [use] will be on triacetate b[ase] packaged in rolls $\frac{1}{4}$-in. [wide] standard lengths.

Sale of tape for popul[ar] recording uses will be [through] Kodak's regular distribut[or] ganization of established [photo]graphic dealers, many [of] are already familiar with [the] of tape recorders and rel[ated] terials.

In its professional mo[tion] ture film business, the [company] has also been in close t[ouch] customers who use pr[ofes]sional magnetic tape, and the [profes]sional motion picture s[ales] sion of the company w[ill] the distribution of Kodal[ak] this trade.

Kodak has previously had interest in the tape fiel[d] United States as a su[pplier] Kodapak plastic sheeting [for] by other tape manu[fac]turers. Since 1952, the company has provided for coating of a [magnetic] track, called Kodak Sho[t] Coating, on amateur mo[tion] ture film for sound recor[ding].



Kodak research scientists [are] continuing investigation [of] plete range of magnetic [re]cording varied applications such [as] ment recording and [auto]computing.

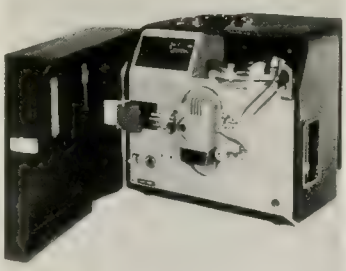
The firm current...roduces about $8,000,000 an...ly ... non-theatrical film foot...—TV commercials and in...y-sponsored films.

P... management sees tremen...potential in 8mm motion pic...projection, predicting a vast ...as in their use by business ...al... personnel training and ...ic... relations. Through sale of ...Videotronic 8, MPO can par...ti... in the new 8mm sound ...b... offering clients a sales p...kage from production of ...ri...nal film through to leasing ...le... of the projector.

P... will sell the projectors di...r... or will lease them on a ...-purchase plan which will av...e ... dollar a day per salesman. ...p...n was worked out in or...to... permit a company with a ...s...les force to fully equip its ...e... staff with projectors without ...ma... major capital investment ...m... equipment.

...re... main features made the ...o...tronic 8 a useful marketing ...sa... aid:



...) ... is portable, weighing 18 ...ds

...) ... has a large, 9-1/4 inch ...l... 3/4 inch built-in rear ...n... which looks bright in day...A... sales prospect can view the ...ri...ht on his desk top. A ...r-... mirror adjustment ...h... to conventional screen ...co...n if desired for larger ...p... presentations.

...) ... film rewinding is automatic ...a... film can be projected con...u...ly without an operator. ...m...kes the Videotronic 8 well ...d... for use in convention ex...s... and retail displays.

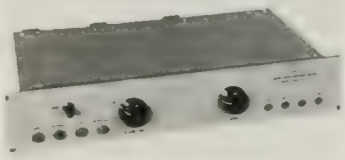
...a... innovations and patented features are found in the Videotronic 8. The magazine, which holds up to 15 minutes of 8mm film, is held in place by patented guide arms that perform a unique function: the arms shape the film coil within the magazine to create an open space between the film coil and the magazine's center core. The film feeds into the projector from this friction-free space. The film is not drawn tight against the magazine center which can cause strain and wear. Another feature is the machine's unique film path, said to be the shortest found in any 8mm repeater, and making it easy to thread and less susceptible to operational mishap.

MPO engineer Don Woelfel also designed special rollers and gate to carry the film with minimum tension along its path. He incorporated a power-driven film platter into the design — unique with the Videotronic 8. A further aid to increased film life is the treatment of all film used in the projector with a protective film coating. Lab tests of coated films run through the Videotronic 8 are said to have shown no visual signs of film wear in up to 800 showings.

"Videotronic 8" mechanism features a short film track; automatic rewinding.

The Videotronic 8 is permanently lubricated and operates quietly. A four-fan oversized cooling system would seem to assure dependable all-day operation.

Optically, the machine is equipped with a custom-made lens. It has a newly-designed Sylvania projection lamp available throughout the country. The sound system uses transistors and provides distortion-free sound at high volume. Overall carrying size is 12-1/2 by 14-1/2 by 8-1/2 inches.



New AUDIO-VISUAL Equipment

Recent Product Developments for Projection and Production

Distortion-Free Amplifier to Compress Sound Tracks

☆ A compressor amplifier which permits compression of dialogue or music tracks for film use without introducing detrimental distortion to the program has been developed by Magna-Tech Electronic Company, New York.

Designated as the Model Number 31, the unit was designed specifically for use in stationary installations so that the power supply, meter, and attenuators of an existing console can be employed. The compressor incorporates a solid state variable gain device and a two-stage push-pull audio amplifier on one chasis.

Model "31" Compressor Amplifier

The price of the unit is listed at $650. Further technical information may be obtained from the New Products Desk, BUSINESS SCREEN.

Natural Lighting's Gaffer Grips Useful on Location

☆ A handy new accessory called the ColorTran Gaffer Grip has been introduced by Natural Lighting Corp., Burbank, Calif. The Gaffer Grip, constructed of cast aluminum with strong clamping jaws, can be used to support lighting equipment in locations where it is not practical to use stands. The jaws are studded with high friction rubber grips affixed so they cannot be lost and will not mark the gripped surface even after prolonged use.

ColorTran Gaffer Grips are available in several models. Model GAG with 5/8 inch stud to support lights of largest ColorTran size, baby kegs or flags, is priced at $6.90. Model GBG with a universal swivel mount and special spring-loaded brass fittings is priced at $8.90. Other models are available with medium or mogul porcelain sockets. Bell & Howell's "Tandem-Matic"

Tandem-Matic Projector Brings Dissolves to Slides

☆ A new slide projector that gives still pictures the "lap dissolve" effect of a professional film production has been introduced by Bell & Howell.

Called the Tandem-Matic Professional, this projector is said to represent the first major innovation in still picture presentation since the invention of the slide projector. A touch of a button on the projector's remote control, and one slide fades slowly from screen as another takes its place giving the "lap dissolve" effect, the first time that this effect has been produced by a single standard projector.

The Tandem-Matic is two separate 7-element optical systems housed side by side in a single unit, key components being two 5-inch, f/3.5 lenses focussed on the same spot on the screen. Synchronized blades gradually closing the diamond-shaped iris of one lens while opening that of the other produce the "lap dissolve" effect. A touch of the remote unit can stop the "fade-over" at any point to produce a double exposure effect useful in sales shows where lines can be made to spurt across charts and graphs. Both optical systems use one 750-watt lamp giving enough light for long projection distances. The remote unit also contains focus-control and reverse button and a light pointer to show details on the screen.

The projector has a special Tandem Tray holding 54 slides that loads slides alternately into detatchable look-'n-load editors of the two optical systems. The first slide goes into the left-hand editor, the second into the right. A signal light indicates whether left or right editor is ready to be loaded. Slides move into position on either side of the lamp rather than in front of it and 45-degree mirrors reflect the images forward through the lenses. Two slides are always in position at once, one being projected, the other following when the iris of its lense opens, thus virtually eliminating "popping" on

Admaster's New Viewer for Overhead Projection Slides

A new viewer for overhead projection slides has been announced by Admaster Sales Corp., New York.

The Admaster Viewer, which is incorporated integrally in a lightweight attache case, is intended for previewing presentations for small audiences, retouching or viewing any type transparency.

The unit holds 40 overhead projection slides in a cover gusset. It pops open in seconds and is illuminated by a micro switch-operated lamp. The panel for viewing is eleven inches square. Weight is 9 and ¾ pounds.

The Admaster Viewer will be sold by authorized audio-visual dealers and producers. The price is $42.50.

* * *

Stereoflex Adds Dimension to High-Speed Motion Study

The study of motion in military, industrial and scientific research programs has been given added dimension by a new high-speed stereo motion picture camera.

The Stereoflex, said to be the first high speed rotary prism camera which photographs its subjects in full-scale stereo pairs, is capable of exposing up to 15,000 frames per second. It was developed by Benson-Lehner Corp. in Santa Monica, Calif. for the U. S. Naval Weapons Laboratory in Dahlgren, Va.

To achieve its 3-D effect, this camera uses a system of mirrors that are adjusted along a track in front of the camera and tilted to bring the desired image coverage to lenses mounted at right angles to the camera's viewing axis. Two 16mm images are recorded side-by-side on a single strip of 35mm film which, when shown on a special projector designed so that an image can be adjusted on the screen for 3-D viewing, are in slow motion reducing the speed of an operation up to 1,000 times.

Right: here's setup for new Stereoflex camera developed by Benson-Lehner for high-speed motion study and research.

High acceleration rate (film goes from standing start to optimum speed in 0.5 to 0.6 seconds) of the camera's synchronous motor and drive system which maintains a constant exposure rate once top speed is reached delivers an end product in which 80 per cent of the footage is exposed at maximum speed.

This longer, constant speed running time increases the value of films to those observing slow motion studies. For further information on the Stereoflex Model A, write the New Products Desk, BUSINESS SCREEN

* * *

Microwide Lens Doubles the Size of Stripfilm Pictures

It is now possible to double the size of pictures on strip film projectors using a lens of 1.242" outside diameter with Buhl Optical Co.'s new Microwide short-throw, wide angle lens. The 1.5 E.F.L. Microwide lens is priced at $40. Write to the New Products Desk, BUSINESS SCREEN, for added information.

Protect-a-Print Leaders Help Reduce Print Damage Costs

A heavy-base, special coated green-toned acetate leader helping to eliminate or significantly reduce film damage from primary sources — misthreading and scratching. It is being currently used by business and educational film libraries, by instrumentation groups and producers.

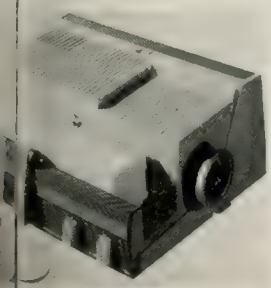
Protect-a-Print, as the special leader is called, is manufactured by Photographic Specialties, Inc., Hollywood, Calif. It virtually eliminates misthreading hazard through greater thickness. Shoes cannot be closed unless perforations are seated in the sprockets and attempts to force shoes shut make puncturing difficult because of the thickness of the material. Library field reports indicate that avoidance of misthreading damage reduces leader and print replacements by about 90 per cent.

When used as a leader, in the camera or projector, Protect-a-Print eliminates the basic cause of scratching through the abrasive bound into its surface which automatically removes dirt and built-up residue emulsion.

Since both the abrasive and binder in this leader are softer than metal, there is no cutting of film gates. This was determined

dury tests by micrometer urements after a long run ot-t-a-Print alone. The only vs a fine polishing of film-ctg surfaces which might e erforation wear.

rmal practice is to use a 10-ngth of Protect-a-Print ojectors are known to be ually cleaned. If projectors nd n to be cleaned regularly, Protect-a-Print is used on all n, a 7-foot leader is suf- – or a 4-foot tail leader ves the equipment clean- he next reel. Splicing on ct-Print is done using nor-ecniques.



lop of Protect-a-Print has effective in reconditioning cts and cameras when run gh about 30 seconds, re-de with the cleaning surface pposite direction and run other half minute.

ailable in 16, 35 and 70mm, product is unconditionally ted by the manufacturer r the life of the print. For er etails, write New Products USINESS SCREEN, Chicago linois.

GENERAL DYNAMICS

(CONTINUED FROM PAGE 31)

trol of synchronous motion picture recording with the 16mm magnetic sound projector.

The Eastman 25B projector is probably the only really "expensive" piece of equipment in the Center, but this redoubtable machine is well-known as one of the finest obtainable and a workhorse requiring a minimum of maintenance. It has optical and magnetic sound and projects either direct or via a permanent wall mirror to the Plexiglas rear projection screen — which, incidentally, gives a picture of fantastically good quality.

One interesting innovation is a 6X spotting scope permanently mounted adjacent to the projector so the operator can always be sure of absolutely sharp focus.

Winding up the booth equipment is a slide projector, which also projects via the mirror to the rear projection screen.

General Dynamics is not maintaining a headquarters still photography operation at the present

YORK PREMIERES WITH DUO-PIC:

(CONTINUED FROM PAGE FORTY)

Besides acquainting dealers and salesmen with York's line and proper sales approach, the production also showed them how to use a new, specially-designed demonstrator book.

Black-and-white prints of the slides and motion picture film and the synchro film interlock cord were included in the kit along with instructions on their use. Any slide projector that automatically advances the slides and any movie projector are suitable for the Duo-Pic method.

Owens believes the production "played an important part in our over-all program." He adds, "All in all, we felt the kit was very successful and would highly recommend its use to any company that wants to put a spark into its meetings . . ."

EXECUTIVE NAMES IN THE NEWS:

(CONTINUED FROM PAGE EIGHTEEN)

Lange Becomes Vice-President of Niles

☆ Harry Lange has been named a vice-president of Fred A. Niles Communications Centers, Inc. The company's Executive Producer, he will continue to be based in Niles' Chicago headquarters. A 30-year veteran of the film business, he was general manager of Sarra's Chicago studios, joining Kling Film Enterprises as executive vice-president in 1956. In 1958 he became supervisor of TV film production at McCann-Erickson, Chicago and joined Fred Niles from that post.

* * *

Shaw to Supervise Films for DoALL

☆ Wilfred (Dave) Shaw, Jr. has been named producer of industrial films by the DoALL Company, Desplaines, Ill. A film editor, cameraman and director in both commercial studios and in the television field, Mr. Shaw will take full charge of DoALL's extensive marketing film program.

The company is producing a film about each major product in its machine tool, cutting tool and precision gage lines. It was the first U.S. firm to make 8mm sound films a regular part of its marketing program.

Quality

...in two very important ways:

Through control

In any recipe for successful film-making, control – *complete* control through all phases of production – is a vital ingredient. We're strong on control. From research and writing through photography, film processing, editing, sound recording, printing and inspection, *Wilding means quality!*

Through size

We're a large and varied organization, geographically, in equipment and facilities, and in people. Our 150,000 square feet include four Chicago sound stages (largest studios between the coasts) and two sound stages in Detroit. In New York and Hollywood we also offer only the finest. In *every* audio-visual product, *Wilding means quality!*

Develop Better Supervisors and Managers With

Modern Management Films

Make your supervisors better leaders with Modern Management Films, produced in full color and sound by The Bureau of National Affairs.

These 16-mm films present typical supervisory situations and suggest solutions to supervisory problems in an interesting and stimulating way. They are designed to precede and encourage group discussions.

Each film is about 10 minutes long, and is supplemented by a discussion leader's guide. A 95-member advisory panel of leading industrial executives suggests subjects and reviews scripts to make sure they are realistic and sound in principle.

More than 1,000 firms have successfully used the first Modern Management film, "LISTEN, PLEASE." We now offer the following films:

LISTEN, PLEASE... a series of situations in a supervisor's typical day which emphasize the importance of *listening* and *communicating*.

THE CASE OF THE MISSING MAGNETS... showing how a supervisor can motivate employees for better teamwork and production.

INSTRUCTIONS OR OBSTRUCTIONS... Dr. Paul Pigors of M.I.T. demonstrates the primary task of supervision: *giving orders and instructions to others.*

THE CHALLENGE OF LEADERSHIP... a dramatic demonstration of leadership. Designed to stimulate supervisory thinking about leadership skills.

Available for purchase or rental.

A Brief Preview of Some of 1962's Film Award Competitions

WHAT'S AHEAD in film award programs in 1962? This single query accounts for a lot of mail and calls to our editorial bureaus, so let's preview the main events for the year ahead. They'll all be covered in detail in your 12th Annual Production Review issue of BUSINESS SCREEN (in mid-February) but these pointers will help:

Overseas festivals are coordinated by the Committee on International Non-Theatrical Events, 1201 16th St., N. W., Washington 6, D. C. and film producers and sponsors who wish to enter films suitable for Edinburgh, Venice, etc. have until December 31st to submit application forms for pictures completed in 1961. Write Harold Wigren, administrative coordinator for CINE, for application forms.

4th American Film Festival

The domestic awards program opens with the 4th American Film Festival at the Hotel Biltmore, New York City, on April 25-28. Both motion pictures and filmstrips in a wide variety of categories (34) are invited. File entries by midnight, January 20, 1962. Obtain application forms from the Educational Film Library Association, 250 W. 57th St., New York 19.

Also prominent in film citation, are the annual Freedoms Awards at Valley Forge, Pa. on Washington's Birthday (entries closed) and the subsequent "Day of Visual Presentation" awards program sponsored in Manhattan by the National Visual Presentation Association, later in the spring. Columbus' Film Festival has been moved up to early autumn, so there's time to await your REVIEW copy for entry details on that one!

Television Commercial Awards

Television commercials have their awards days at opposite ends of the country. Entries closed on December 1 for the International Broadcasting Awards sponsored by the Hollywood Advertising Club on the West Coast but there's time to enter the American TV Commercials Awards program in New York this spring. Write Wally Ross, who ably directs this affair, at 40 E. 49th St., New York 17, for entry details.

One of the greatest of all awards programs, specializing in a field of vital importance, is the National Safety Film Contest, conducted by the National Committee on Films for Safety. Write Secretary Bill Englander of the Committee c/o the National Safety Council, Chicago 11, Illinois for entry details.

And for *Canadian* film news *only*, there's the 14th annual Canadian Film Awards contest which includes theatrical, non-theatrical, television and amateur films. Entry deadline for professional product is January 15.

There are others and this report will be supplemented in our Issue 8 (next up) and reviewed in detail in that big 12th Annual Production Review issue which will grace our 23rd volume in mid-February '62!

* * *

New Film, Television Studios Point Up New York's Growth

☆ MPO Videotronics, Inc. has announced plans to construct a new integrated production center with studios and offices to house all the firm's New York activities on East 44th Street.

Producing Artists, Inc., TV commercial production firm will put up a new studio, now budgeted at a half million dollars, on East 59th street.

Two blocks south, on 57th Street between Tenth and Eleventh Avenues, CBS has announced plans to erect a $14,500,000 television center.

* * *

Air Force Personnel Attend Seminar on Communications

☆ Photography's potential as a teaching tool was demonstrated to Air Force personnel attending a special seminar on visual communications at the Rochester headquarters of the Eastman Kodak Company.

Seventeen representatives from major commands attended the four-day seminar, held Oct. 20-23, planned by Kodak at the request of the Air Force. The representatives will apply their new knowledge of visual communication techniques to briefing, training and reporting operations.

Thomas W. Hope, assistant adviser on non-theatrical films, and Adrian TerLouw, of the customer service division, arranged the program. Included were visits to color technology departments and other pertinent areas of the company's facilities .

we want to thank

Attorney Sydney Mayers Will Head Movielab Legal Division

☆ Sydney A. Mayers, a well-known attorney in the film industry for many years, has joined the legal department of Movielab Film Laboratories, Inc. Mayers will head a newly-created legal division, handling the firm's corporate and stock exchange activities, as well as transactions with producers and distributors.

In announcing the new appointment, Saul Jeffee, president of Movielab, said:

"With the continued growth of Movielab, and particularly since the listing of its shares on the American Stock Exchange, many new and complicated legal operations have developed. To relieve Dan Eisenberg, our secretary-treasurer, from some of his legal burdens, and to free him for increased executive duties, we are happy to have with us in Sydney Mayers one who is not only experienced as corporate and financial counsel, but also is unusually well-grounded in all phases of the motion picture field."

* * *

Aufhauser to Direct Division as Elgeet Acquires Vicom, Inc.

☆ Vicom, Inc., Rochester, N. Y., has been acquired by Elgeet Optical Company, also of Rochester, and will be operated as a wholly owned subsidiary of Elgeet.

Viscom has been a specialist organization in the audio-visual communication field. Fred E. Aufhauser, general manager, will continue

Fred Aufhauser . . . joins Elgeet

as the operating head of the Vicom Division of Elgeet, and will assist David Goldstein, president of Elgeet, in developing a full line of audio-visual equipment and related products.

Mr. Aufhauser has been active in past years in developing marketing theatrical projection lenses; fixed and variable anamorphic lenses for wide projection; overhead and projectors; and was first to duce an 8mm sound rear tor, the Vicaudio.

Above: this forest of poles will become the new customer entrance and lounge of General Laboratories' new two-story addition to the company's main laboratory building in Hollywood. The building, expected to be completed in January, will also provide additional editing rooms for Lab's clients on the coast

"Out of the North" Prints Available to Sports Groups

☆ *Out of the North*, one of the finest outdoor sports films of all time, has been re-released by its sponsor, American Motors Corporation, after a hiatus of several years. It is again available, with 100 prints in circulation, through Modern Talking Picture Service.

The film, produced by NPO Productions and photographed by Larry Madison, was made about eight years ago. BUSINESS SCREEN said about it at the time: *"Out of the North* should be winning friends for Nash for dozens of years to come. It is timeless, and as beautifully portrayed as a flock of Blue Geese on the wing."

The picture was unusual in that it was completely non-commercial but with a hard-selling, but absorbing commercial tacked on the end. People liked the commercial version and seem to like the new version too. More than 10% of all audience comment cards received by Modern mentioned the commercial and overwhelmingly in a favorable light.

Typical comments included these: "this is advertising at its best" — "Even the commercial was a real pleasure" — "the humorous ad at the end was enjoyed by all" — "commercial was witty" — "Nash commercial very cleverly done."

THE EDITORIAL VIEWPOINT

THE GOLDEN RULE is our holiday front cover "message" and it has meaning for those who sponsor and for those who produce today's factual films. These films are reaching ever-widening audiences, their individual print requirements run into hundreds and thousands to satisfy an insatiable demand for facts, clearly and vividly presented, in a much smaller but infinitely more complex world.

But the picture which fails to "give unto others" in its audience *the full measure* of truly useful information will fall short of its potential. And the producer, fortified as never before with technical advances in both equipment and processes, must give new emphasis to fresh, original concepts and new character to that much abused word, *creativity*.

35mm, 16mm, 8mm are dimensions of projection. Each represents a vast proportion of the actual *or the prospective audience*. But what goes *before the camera and not the dimensions of the film within it* is the everlasting principle which must guide both producer and sponsor.

Murrow Asks for a "Cavalcade of America;" Pays a Tribute to Pan-Am, Greyhound Films

☆ Speaking to representatives of the film industry in Hollywood on November 5th, the Director of the United States Information Agency, Ed Murrow, asked for the kind of picture some far-sighted sponsor could well afford to provide to the world beyond our borders:

"A type of cavalcade of America would help immeasurably abroad," he said. "An intense curiosity around the world raises more questions about this country than we can ever answer. We answer them in words. You can answer them in pictures. What I have in mind is an epic on America, a travelogue to en travelogues, the trip that any reasonabl telligent man would take, showing what w like, how we live, and what we do." An added this tribute:

"Parenthetically, I might add that con cial films made by Pan American and hound some years back are still impo weapons in any film arsenal that tran America abroad."

A Visual "First" in Sports Competition:

World Bowling Match Audiences SEE the Big Picture

BOWLING has become America's Number One sports attraction with millions of participants of all ages. Reflecting its popularity were capacity audiences attending the recent World's International Match Game Bowling Competition, sponsored by the Bowling Proprietors Association of America, at Chicago's McCormick Place exhibition hall last month.

Something new and vivid in projection was provided as bowlers and spectators were kept informed of individual scores and daily totals by eight huge rear projection sceens above each championship alley and two flanking "summary" screens at each side of the auditorium. Wilding Inc.'s versatile Commercial Picture Equipment division, under the supervision of A. J. Bradford, set up the unique installation.

Project Scores on 10½ x 14-foot Screens

Scoring of bowlers was delivered to the 10½ x 14-foot screens by a battery of specially-adapted Transpaque projectors. The modified equipment delivered a total of 8,000 lumens to the screens, offering clearly vi images despite the 100 foot candles of lig the alleys. Scorers kept in constant phone c tact with each projector operator throu the week-long matches, adding to spectat joyment and match competition by the c and quickly-transmitted scores.

Two "totalization" boards flanking th leys summarized the leaders' positions a day. The screens were also used for dra visualizations, such as opening day cerem when slides of each participating cou flag's and pictures of contestants were sh

States Science Exhibit Commission and The Boeing Company, the project involves:

The world's largest projection screen, the world's largest and widest-angle projection lens, an unusual undertaking in animation and stop-motion photography, and a realistic trip of more than a billion billion miles at thousands of times the speed of light into intergalactic space.

This filmed presentation utilizes a newly-designed lens to achieve a startling effect for viewers. The lens projects the film over the dome of the theatre—360 degrees horizontally and 160 degrees vertically. In effect, the viewer is surrounded on all sides and overhead by a "window into space" through which to watch a journey at fantastic speeds.

As prime contractor to Boeing, Cinerama, Inc. heads a group of subcontractors supplying the film, lens, projection equipment, and screen. Fine Arts Productions, Inc., of Hollywood, has the complex job of producing the unique space film. The idea for this space-age planetarium was developed at Boeing in 1959. In 1960, the Spacearium became a joint effort of the federal government and Boeing.

Home Builders, Producers Council Present Awards to Motion Pictures and Slidefilms

☆ The Producers' Council, Inc., national organization of manufacturers of building materials and equipment, recently joined with the National Association of Home Builders in a 1961 awards program, "Ideas for Home Builders."

Motion pictures and slidefilms were cited among other media in the contest. The award for Exceptional Merit went to U. S. Gypsum Company's *Builder's Showcase*, a filmed television program, prepared by Ray-Eye Productions, Inc.

The program was cited as being an "excellent idea which promotes home sales to the public without requiring any tie-in or payment from the builder. The building industry as a whole should be encouraged to get into more of this type of thing."

A Certificate of Merit went to Owens-Corn-

WASHINGTON FILM COMMENTARY

by Mary Finch Tanham

Washington Correspondent for Business Screen

Circarama Showings Abroad Show U.S. Life to Millions

. . . 75,000 Russians, every four hours, poured through U.S.I.A.'s "Seven-o-rama" film exhibit in Moscow in 1959 to view 12½ minutes of American life as it is "every day", and on Saturday night, and on Sunday.

Crowds of similar magnitude saw "Circarama, U. S. A." at the Brussel's World Fair; in Ceylon and Casa Blanca, 1,300 people an hour have been squeezing into Geodesic bubbles to experience the unique thrill of being totally surrounded by sights of America in lively sound and motion.

The design, modification, and operation of these projection systems—often handled under difficult conditions—was the topic of a recent film lecture presentation by Willis R. Warren, Chief of the Overseas Coordination Staff, Motion Picture Service, U. S. Information Agency before members of Washington's S. M. P. T. E. and 50 exhibitors in D. C.'s Audio-Visual and Pictorial Equipment Show.

U. S. I. A. has filmed typical operations in Kabul, Afghanistan and Columbo, Ceylon for government field workers in far off countries who may be called upon to erect and use similar geodesic theaters.

This production is not only interesting and well done, but carries a big extra kick for those in the motion picture business—for there can be little doubt about the true impact of the medium when one sees, on film, the faces of strange, foreign audiences, infected with enthusiasm and excitement for "Circarama" scenes which need absolutely no verbal explanation.

Italy's Ambassador Fenoaltea Presents Venice Film Awards

. . . In the elegant gardens of his embassy, Italian Ambassador and Signora Bruna Fenoaltea recently bestowed official awards on U. S. producers who won at this year's Venice Film Festival. The Ambassador stated that American non-theatrical film producers deserved encouragement and praise for the high standards which they have set, and he added his wishes that the "hope of winning a glittering prize in Venice will continue to act as stimulation to American industry."

Terrytoons' Bill Weiss receives a Venice award for "Drum Roll" from Signorina Annalina Fenoaltea (ctr) and the Signora Bruna Fenoaltea.

The Golden Lion of St. Mark, which was awarded George and Altina Carey for *Interregnum*, was accepted by James Barker of Capital Film Laboratories; Barker also accepted for Nathan Kroll's *Casal's Master Class*.

Terrytoons' William Weiss accepted for his children's entry, *Drum Roll*, his second consecutive year to receive the honor.

Above: Ambassador Fenoaltea presents award to Maj. Gen. Arno H. Luehman. **Below:** Don Baruch (l.) accepts for producer Ernest Pintoff.

Major General Arno Luehman represented the Air Force at the Review, which won a new award.

Ernest Pintoff won special claim for his experimental *The Shoes*, a story about "hu loneliness in a crowd"; his a was received by Donald M. ruch of the Department of fense.

ddard Space Flight Center reils Film on "Explorer X"

The Goddard Space Flight ter of the National Aeronau- and Space Agency has just re- ed its first motion picture pro- tion, titled *Explorer X*, about h instrumented satellite and pe probe which made front pe news last spring.

lthough basically a technical rt on this Goddard conceived, gned, and tested space pay- d, there is much in NASA's ne film to appeal to the layman rested in space exploration. A there is a wealth of informa- ic here for scientific audiences, cators, and high school physics dents, for whom the produc- id was specifically designed.

his twenty-minute color film, ch was written, directed, and duced for Goddard by John L. shburn in association with By- Motion Pictures, Inc., reviews detail the history, mission and dings of Explorer X.

urprisingly, we find that the ddard center, in Greenbelt, ryland, has a booming, world- e tracking network which ex- ds from Woomera, Australia, Hamilton, Bermuda. We learn t, for this short, 60-hour space ht, 2,000 reels of information e taped for scientific analysis. W are as intrigued—and de- ted—as NASA officials to find t "Explorer X" and earth-based ions simultaneously measured a solar flare traveling at a speed greater than 3 million miles per hour between the sun and the earth.

Indeed, from opening scenes when we are thrown into a darkened sky, and hear the voice of President Kennedy, urging Americans to "explore the stars", we are filled with admiration and wonder for the scientist's imagination and ingenuity.

Goddard's second film, with six production units shooting across the nation, and a story line which deals more with people and less with "hardware", is presently in production for showing to the general public. It's tentative title is *The Story of Echo A-12*.

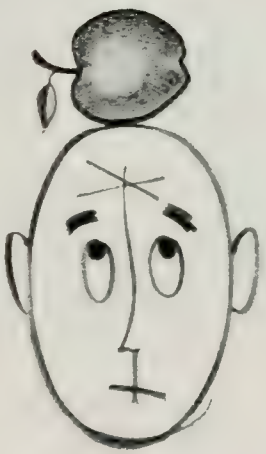
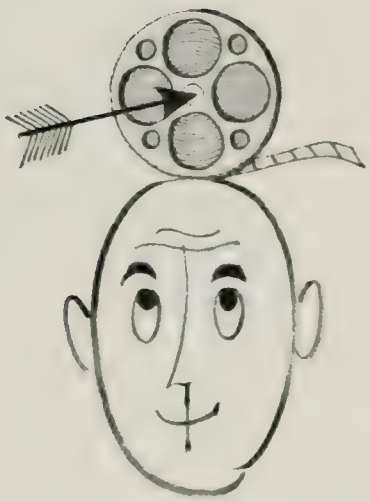
Newman Foundation Sponsors Film History of Campus Clubs

. . . A. Tyler Hull Film Productions of Washington D. C., has just begun production of a 27 minute, color/sound film which will document the 70 year history of the Catholic Newman Clubs of America.



"The production of this film is one of the most important projects ever undertaken in the history of the federation," said Father Charles W. Albright, C.S.P., Executive Secretary of the National Newman Club Federation which is made up of 850 clubs throughout the nation.

One of the main purposes of the film is to inform parents of the activities of the Catholic students on the American secular college campuses. It will also be available for showings to lay organizations, seminaries, schools, and colleges. A shorter black and white version for television release will be made.



At present, Tyler Hull is shooting background material on the life of Cardinal Newman in Eng-

Pured on conference set during filming of "Explorer X Film Report" at NSA's new Goddard Space Flight Center, Greenbelt, Md., group includes D James Heppner, Project Manager (at head of table) and, to his right, scpt writer Larry Washburn awaits reloading of camera for the scene.

When your every shot is vital...

...you can count on us.

Air Force Paintings Inspire One of Year's Best Pictures

. . . A perfectly beautiful new film —featuring powerfully moving paintings of U. S. Air Force life throughout the world by America's top illustrators—has just been created by Pelican Films, Inc. of New York. Combining live action and animation, with minimum narration and big music, a complete story of the Air Force's globe-girdling missions has been captured in lush, flowing color.

Air Force Chief of Staff Curtis E. LaMay has said of the paintings, which carry the story line of the film, that ". . . the compositions of form, color, and light are more than glimpses of faraway places. Each is a moment in the life of the men in your United States Air Force—caught on the canvas of a well known American artist.

"To posterity, these paintings will furnish a priceless pictorial history of our Air Force in a brilliant era. Future Americans, accustomed to split-second travel through measureless space, may find these scenes as antiquated as covered wagons seem today. Yet they record a chapter in the life of our Air Force as vital as Kitty Hawk."

The Air Force On Canvas has been produced under different circumstances than the other films in the Air Force's $850,000 Sponsored Film Program—in that it was born *without* a sponsor. The producer, so enthusiastic about the artistic possibilities of filming paintings in exhibition at the fabulous new Ar Force Academy,

Pelican's Joe Dunford kne[el]s joins Dick Durrance [at ca]mera in filming an Air Force co[m]

shot the two reeler on his ow[n] cooperation with the Air [Fo]rce and the Society of Illustrato[rs] New York and Los Angeles. Al[l] though, as yet in the answer [is] stage. Pentagon officials are la[u]ding lavish praise on the effec[tive]ness of the film, which see[ms] sure bet for film festival priz[es].

The 18-minute "filmagr[aph]" which is a natural for theatric[al] lease, but can be cut for TV [use] produced by Joe Dunford, p[ho]tographed by Dick Durrance, e[di]ted by Jean Oser, and written by [Lou] Hertzberg.

News Along the Film Production Lines

Capital Film Services Buys Ansco's Chicago Laboratory

☆ Acquisition of the Ansco processing plant at 247 E. Ontario St., Chicago, by Capital Film Service, East Lansing, Michigan, has been announced by J. R. Hunter, president of the purchasing company. Negotiations were completed on November 7 and the plant will be operated as Capital Film Services of the Midwest, complementing the buyer's facilities in East Lansing.

Expanded color and b&w processing facilities, including a new 8-hour service in Chicago, are being offered and all Ansco clients will continue to be served as before under contractual arrangements made with the seller.

Capital was established in Michigan in 1936. The new facility comprises one of the industry's most modern plants with special, quality-control equipment. In addition to Ansco color processing, the Chicago plant will handle new Hypan negative and reversal black & white materials. Processing of pre-striped film for the Fairchild 8mm sound equipment (double 8mm) and regular 16mm film will be handled on an 8-hour basis. Chicago telephone number is 943-7441.

Former President Eisenhower addresses the Campaign Gettysburg dinner.

Wide-Screen View of a New Gettysburg

"CAMPAIGN GETTYSBURG", sponsored jointly by THE SATURDAY EVENING POST and the Gettysburg, Pennsylvania, Junior Chamber of Commerce, was introduced, with over 150 projected wide-screen slides of downtown areas of Gettysburg, to the city's civic and business leaders at a kick-off dinner for the restoration and redevelopment project on September 27, at Gettysburg. Dwight D. Eisenhower, who spoke at the dinner, warmly endorsed the new project.

The slides, which dramatically illustrated what a restored Gettysburg would look like, were produced by Visualscope, Inc., New York. They were shown to merchants of the city to illustrate suggested changes to restore the architectural appearance of the community in keeping with its distinctive personality and historical importance in the nation. Business leaders will be encouraged to carry this restoration work into the interiors of their places of business.

"Campaign Gettysburg" is the first of a series of "Operation Re-Do" projects launched by The Saturday Evening Post with the joint sponsorship of individual civic groups for the redevelopment of more than two thousand towns throughout the country. Following the Gettysburg campaign a Plan Book for town redevelopment will be drawn up and distributed to Mayors, Town Councils and various civic groups throughout the United States.

The Dependable One

There's something very comforting about the way a Kalart/Victor projector runs. Whisper quiet. Almost without effort. And above all, dependably. It's *always* ready to put on your program.

One reason is the lubrication system designed exclusively for Kalart/Victor projectors. Oil is metered from a large reservoir on "demand feeding" by means of a wick. Parts are given only the amount of oil they actually require. There can be no leakage because the oil travels *upward* through the wick by capillary action. One filling of this oil reservoir keeps the projector running smoothly for some 1,200 hours, or a full year of heavy use. What efficiency!

Of course, there are a score of other features that contribute to Kalart/Victor's reputation as the *dependable* 16mm sound projector. Your authorized Victor Audio-Visual Dealer will be more than pleased to point them out to you.

Free — "How Industry Profits from Films." Booklet is packed with information on use of audio-visuals in every phase of business, from training to sales. Send now for your copy. Address your request to Victor Animatograph Corp., Dept. 4

Modern Science "Rides the High Iron"

America's Railroad Industry Turns to Computers and Rese

SPONSOR: Association of American Railroads

TITLE: *Science Rides the High Iron*, 25 min., color, produced by Robert Yarnall Richie Productions.

☆ "Is my freight car on schedule?" the businessman asked—a question posed many times daily by railroad customers throughout the nation.

And in the moment needed to feed the question to an electronic computer he got his answer: "Yes sir, your car left Chattanooga on train number 153 and will be on your siding tomorrow morning."

Multi-Billion Modernization

The computer is an example of the practical results being achieved by a multi-billion-dollar railroad program of scientific modernization—a program dramatically depicted in the new motion picture *Science Rides the High Iron*.

As narrated by Chet Huntley, the film tells how railroads have teamed up with scientists and engineers to find new ideas and designs for improving operation and services.

The story of progress in the industry whose emblem is the flanged wheel—the only wheel that needs no steering—takes the viewer inside the modern laboratories studying problems ranging from atomic locomotion to research. It shows such innovations as centralized traffic control, automatic classification yards, micro-wave, electronic computers, piggybacking and containerization.

J. Handly Wright at Previ

☆ The film was shown at a recent premiere at the Four Seasons Restaurant in New York, October 30, and introduced by J. Handly Wright, vice president of the A. A. R.

Wright pointed out that the railroads have petitioned Congress for relief from the burden of over-regulation, discriminatory taxation and subsidized competition which "have all but overwhelmed the old iron horse at a time of expanding national economy."

But Mr. Wright emphasized

the film sheds no tears. It tively portrays how the rail- ds "have done all they can to p themselves before appealing legislative relief."

Science Rides the High Iron is illustrated by Bob Richie's fine pictorial sense. It was written by Tom Orchard and directed by James Petrie.

A Pioneer in Research and Development

The Film Story of United Shoe Machinery's 60-Year Program

RESEARCH AND DEVELOPMENT has taken a major role in U.S. dustry within recent times but or New England firm was well ng the path 60 years ago. At h turn of the century, United She Machinery Corporation, Bos- o Mass. established its develop- nt department. Later known as h United Research Division, the ad ity has developed nearly 900 ne and improved machines to la. The story of these machines in their part in the manufacture of better shoes is the theme of *Re- ch Is Only the Beginning*, a 30-minute color film recently pro- uced by Bay State Film Produc- ns, Inc.

Filmed in United's Plants

ilmed in United's vast facilities n Beverly and Boston, the pic- u highlights steps taken to in- au efficiency and reliability in y piece of equipment designed in manufactured by the Company. n the Research Labs, machines ar built up from custom-tailored pie es. Then motion time analysts te in with recommendations to pr mote speed of operation and re- lu ion of operator fatigue. En- gi ers and designers finalize de- ai of function, materials and m hods to assure ultimate per- on nance.

An exceptional sequence shows h art of casting and forging in U ited's completely-equipped o dry. Color film and camera e nique combine for a fine pic- o l representation of an age-old ar From forge, foundry and machine shop parts flow into United's huge storehouse where aisles a quarter-mile long run between bins and racks holding millions of machine components. Here United's parts system takes over to provide quick replacements when and where needed in the field.

. . . of Many Men and Skills

All along the line from Research to the installation of the completed machine in a manufacturer's plant, the work of many men, employing many skills, is graphically portrayed throughout the 30-minute film.

Research Is Only the Beginning will eventually be made available to technical groups, schools and specialized audiences through United's Boston headquarters.

Below: scene from the United film "Research . . . the Beginning" a recent Bay State production.

KALART VICTOR

MOVIEMATIC AND DUOLITE MODELS

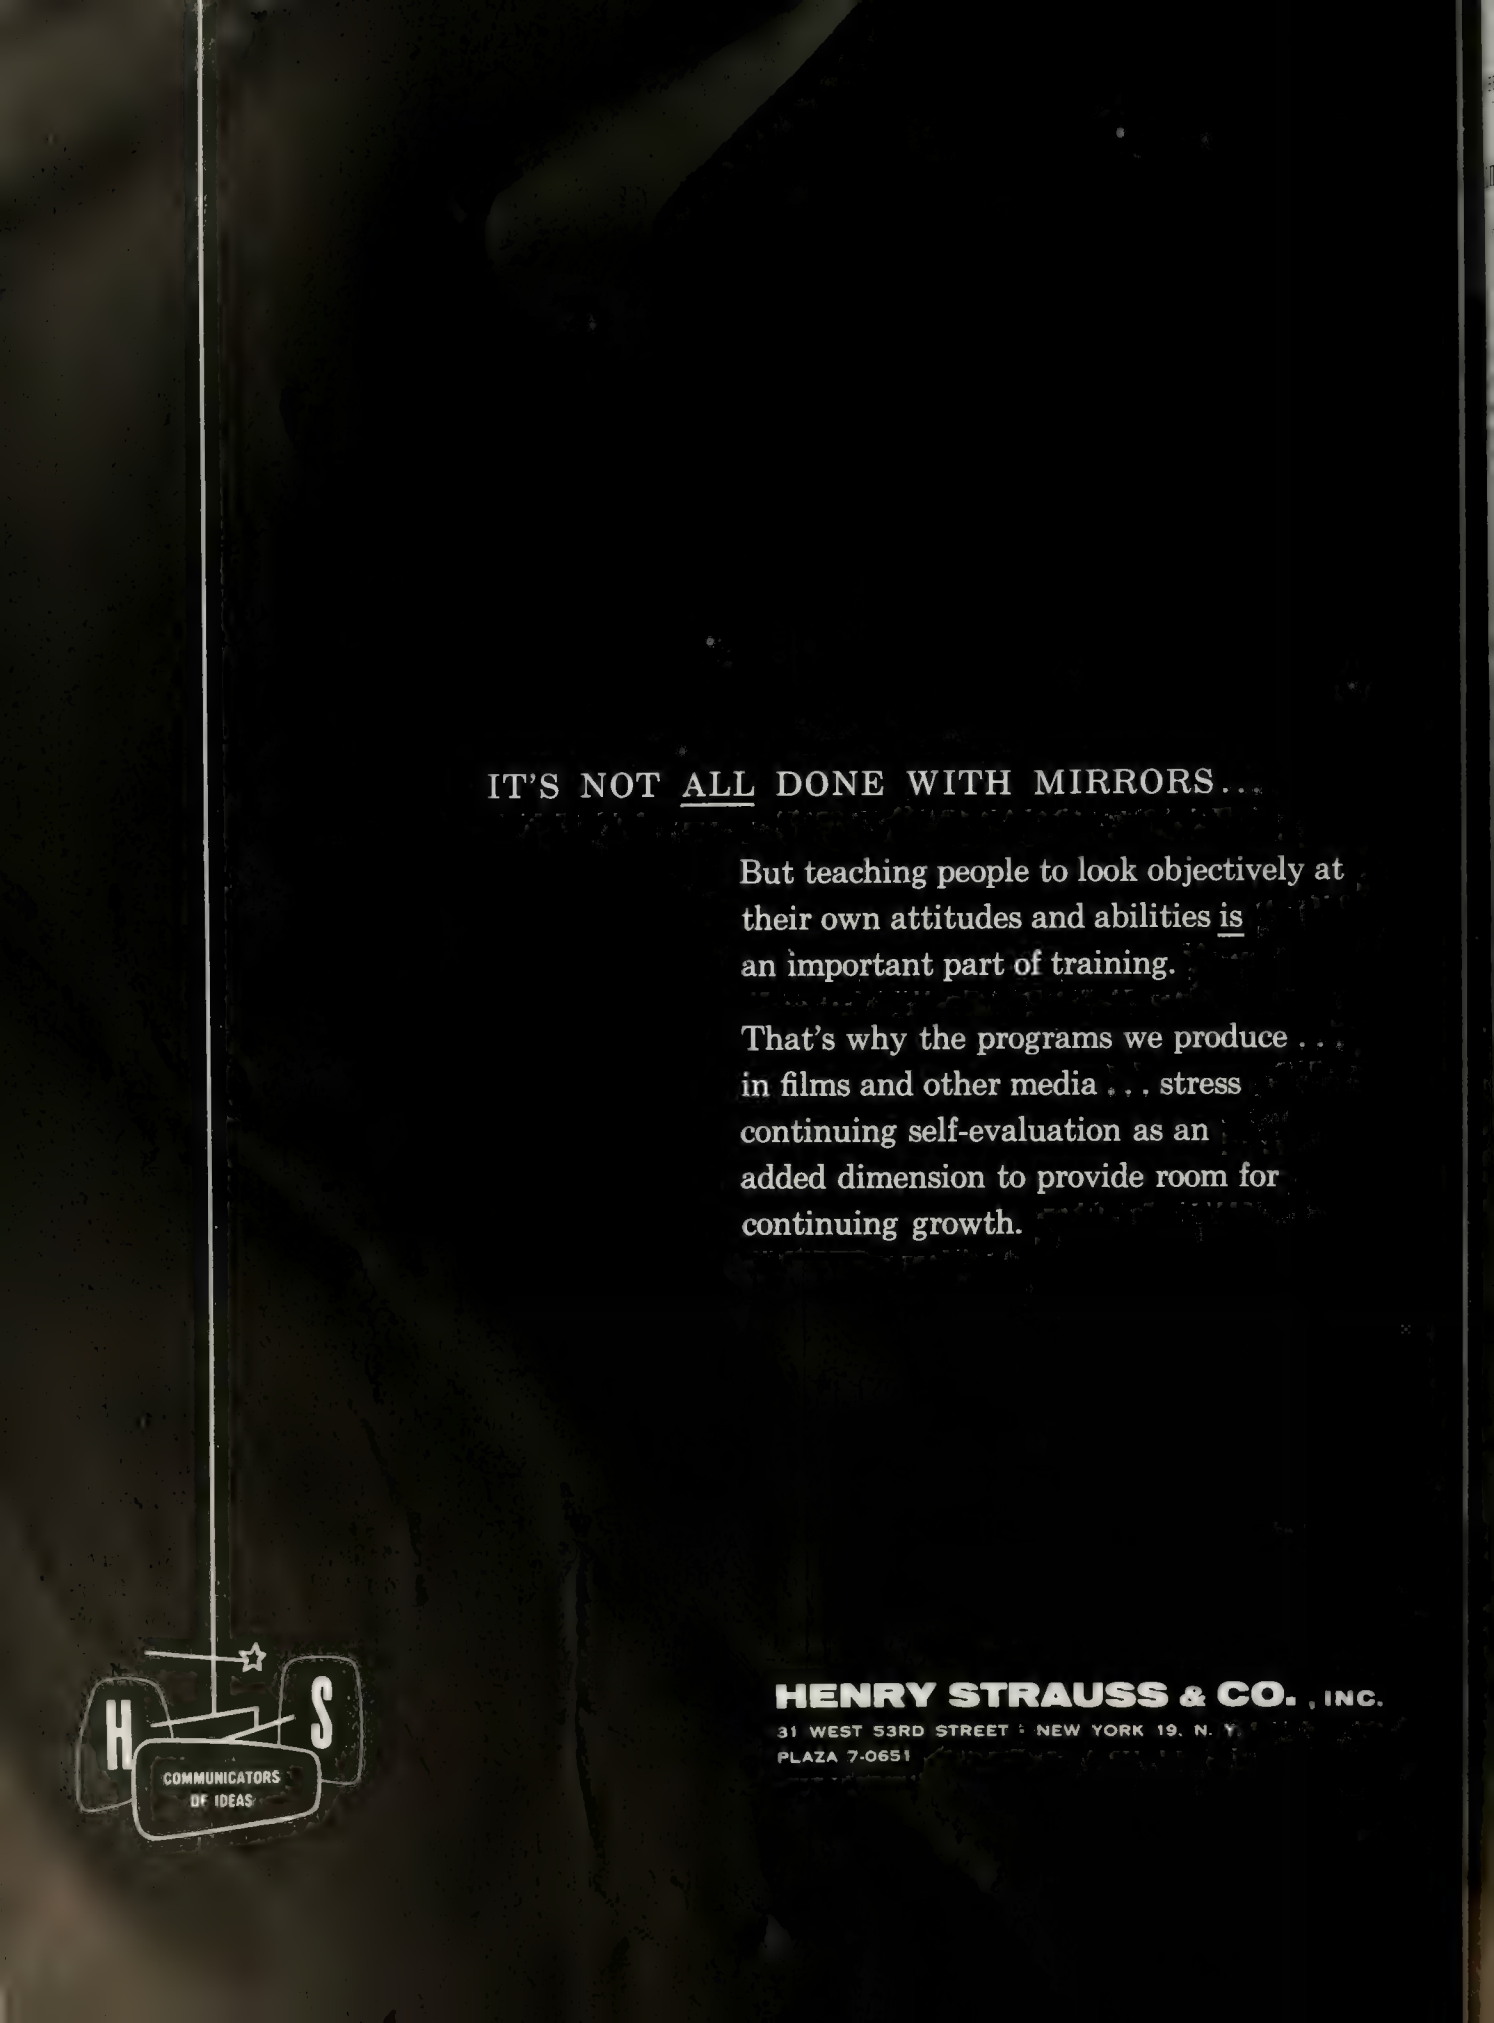
Moviematic Model TM-3 with TV screen and repeater magazine. Weighs only 23½ lbs.

One for the Road

Or the top of a prospect's desk. Or on a counter at point of purchase. Or in a hotel room for a sales meeting. *Or anywhere.*

Moviematic and Duolite projectors by Kalart/Victor are designed for showing 16mm sound films where you want . . . when you want. No need to find a room suitable for projection, set up a separate screen, darken the room or align the picture. These special-purpose (formerly TSI) models feature a built-in TV-type screen for daylight projection and use with small groups.

Moviematic models offer one additional feature—the repeater magazine—to provide maximum convenience when you are featuring a particular film. No rewinding or rethreading necessary. Your message is repeated automatically.



You may also use Moviematic and Duolite models as conventional projectors with a remote screen for large group showings. Choose the model that meets your own specific needs. You may obtain a single projector—or a fleet—on rental, lease or lease-to-purchase basis.

Get the full story on Moviematic and Duolite projectors. For information and the name of your nearest dealer, write now to Victor Animatograph Corp., Dept. 4

nnounce Program of N. Y. Film Workshop

With Emphasis on Results, the Film Producers Association and National Advertisers' Group Co-Sponsor Full Day's Program at Plaza January 17

HE FILM PRODUCERS Association of New York, with the cooperation of the Associa- of National Advertisers, has announced gram details for a day-long advertiser- ented workshop "How to Get Maximum Re- s From Your Business Films" on Wednes- , January 17 at the Plaza Hotel, New rk city.

The workshop program, beginning at 9 a.m. continuing through 5 p.m., will feature a cheon address by Roger Tubby, Assistant retary of State for Public Affairs.

elcoming Address by President Van Praag

William Van Praag, president of the Film ducers Association, will open the Work- p program with a brief address of wel- e, followed by the presentation "How Ad- tisers Are Using Films Profitably" in such ses as merchandising and advertising cam- gns new product introduction shareholder relations, customer relations, dealer training expanding business abroad.

uccessful planning, budgeting, production, ribution and evaluation techniques now king for advertiser sponsors will be demon- ted and discussed in a series of round table, and individual presentations by leading cutives. Presiding chairman for the event Willis H. Pratt, American Telephone & Tele- h Co. and chairman of the ANA Audio- ual Liaison Committee. Robert Bergmann Filmex, Inc. is head of the FPA planning mittee. Coordinator of the program is llace A. Ross, public relations counsel to FPA and director of the American TV mmercials Festival.

To Unveil an ANA Report on Budgeting

Highlights of the program include distribu- of the new ANA report on budgeting for , medium and high-cost productions. This rt has just been completed with the coop- ion of the Film Producers Association and be presented jointly by Alden H. Living- of the du Pont Company (for the ANA) and Peter J. Mooney, of Audio Productions, for the FPA.

A unique method of presenting outstanding business films that illustrate specific uses by advertisers has been devised. A battery of projectors, operating simultaneously, will provide this "Screen-O-Rama" feature.

Film Distribution Leaders in Panel Session

All principal phases of the industry will be presented as film distribution facets are discussed by Frank Arlinghaus, president of Modern Talking Picture Service, Inc., and Ray Bingham, president of Association Films, participants in a panel on "Achieving Maximum Exposure for Your Business Films."

Laboratories, optical and other specializing film service organizations are contributing to the program feature on "Creative Contributions." A specializing presentation "Measuring Effectiveness of Your Film Program" will be made by C. T. Smith, General Statistician for Marketing and Public Relations of AT&T.

Advertising managers and audio-visual executives from numerous companies will present case histories on their successful use of the film medium. Company sponsors and film producers throughout the U. S. have been solicited for films, regardless of whether they are members of the ANA or the FPA.

Case Histories of Successful Film Use

Advertising managers and their invited agency guests can secure advance registration forms from the Association of National Advertisers, 155 East 44th Street, New York 17 or the Film Producers Association of New York, at 165 West 46th Street, New York 36, N. Y.

EDITOR'S NOTE: case histories of successful advertiser-oriented motion pictures are being compiled by the Editors of BUSINESS SCREEN from recent issues and further data is being sought in a nationwide survey for inclusion in a New York Workshop brochure.

EDITORIAL PREVIEW

OF NEXT MONTH'S FEATURES

Here are a few of the many features scheduled to appear in the forthcoming Issue Eight of this magazine:

° ° °

"An Association Makes a Film"
by John J. Mullin, Asst. Director, Public Information for the Glass Container Manufacturers' Institute.

° ° °

"The Michigan Story" Preview
Michigan Consolidated Gas Company Pictures State's History, Growth in This Jam Handy Motion Picture.

° ° °

"Unseen Harvesters"
A Fine du Pont Motion Picture Is Featured in an Illustrated Review . . .

° ° °

"Anatomy of an Accident"
AT&T's Hard-Hitting Safety Film — a Jerry Fairbanks' production . . .

° ° °

More About 8mm Sound Projectors
Eyre Branch reports new developments in this new motion picture dimension.

° ° °

Washington Film Commentary
Mary Finch Tanham covers the nation's capitol exclusively for this magazine . . . all the news of audio-visuals from behind the scenes and in the audience!

° ° °

Films on "Maintenance Painting" and "The Magic Hands of A.M.F."

° ° °

"Meet the Marketing Maestro"
A Profile on Adolph Wertheimer . . . the president of Radiant Manufacturing . . .

° ° °

South Dakota's "Open Door"
The Story of Its State Libraries as depicted by Producer Max Howe

° ° °

Picture Story: "The Call"
The Work of Education in India

Texas Baptists Launch a Crusade

"Decade of Decision" Aids Fund-Raising Campaign for Baptist Schools in State

TEXAS BAPTISTS—6,000 strong—jammed the Austin, Texas Municipal Auditorium November 11 for the Hollywood-scale premiere of *Decade of Decision*.

A 21-minute 16 mm color film produced by Keitz & Herndon, Inc. of Dallas, *Decade of Decision* launched the 28 million-dollar Crusade for Christian Education, a fund-raising campaign to support Texas Baptist schools and colleges, sponsored by the Baptist General Convention of Texas.

Of special significance is the fact that on the day of the premiere the Convention unanimously agreed to ban the acceptance of direct federal and state funds by Baptist schools and hospitals.

4,200 Churches and Missions to Show It

While the 28 million-dollar drive will extend until the end of 1965, the pastors of approximately 4200 Baptist churches and missions will be able to screen the film for their

At left: a Baptist lay preacher in private life, TV detective Gregory Walcott stars as the on camera narrator of "Decade of Decision," produced by Keitz & Herndon of Dallas. **Center:** some of the enthusiastic audience of 6,000 who attended the premiere in Austin's Municipal Auditorium . . .

B-TV series 87*th Precinct* and is actively gged as a Baptist lay preacher in private e

he personable young actor is also featured t Danny Kaye in his recent film *On the ople* and in *The Sixth Man* with Tony is.

Hollywood production schedules prohibited a ott's appearance at the Texas premiere.

Special "Eddie" Awards Were Presented

At immediately following the showing, eal "Eddie" awards were presented to & Herndon's Marty Young, director of lm, and, in absentia, to Walcott.

Crusade co-chairman Dr. E. Hermond Westland of Houston explained that the trophy "Eddie" was chosen as a symbol of the heme, "Education."

Presented in narrative style with dramatic ps-ups of students and professional people, cent changes of pace, skillful use of color background music, and a limited amount imation, *Decade of Decision* effectively cments the need for Texas Baptist school college funds.

The Need is for Students *and* Buildings

Such factors as the decreasing amount of rst students enrolled in Baptist schools and lges, a present shortage of 2600 students training for Christian vocational service — al needs for additional campus buildings l are illustrated with graphic clarity and asive conviction.

Within the State of Texas alone, this film achieve new audience records. For there ore than 1.5 million members of Baptist hes in Texas, and virtually every member ventually be exposed to *Decade of Deci* via local showings.

Operator Billie Mead finds her "Answer for Linda" in her own work.

The "Bell" Motivates for Service

"An Answer for Linda," an Intricate Skill Film, Trains Through Inspiration

SPONSOR: American Telephone & Telegraph Company (Bell System).

TITLE: *An Answer for Linda,* 22 min., color, produced by Parthenon Pictures (Hollywood).

☆ The long distance telephone operator is a busy girl and if she isn't capable of multiple functions during her period at the board, there's discouragement and less efficient service for her callers.

An Answer for Linda, 22 minutes, Ektachrome color, was produced to help Bell companies meet a training problem with *both* experienced operators and those in training. The basic, technical description of its solution: "Overlapping Techniques in a Mark Sensing Office." ("Mark Sensing" is a form of toll ticketing adapted to computer handling.)

The mission of this employee-training "skill" picture is to inform but it accomplishes that goal better than many through motivation, inspiration and simple "one girl to another" guidance. The "Overlapping" principle means that instead of an operator performing her tasks one-by-one, Indian file, she will do two or three or four things simultaneously, with several telephone calls "working" at the same time. Even experienced operators who have been working with Mark Sensing for some years need this "refresher" training.

But viewer resistance would be strong if the film's series of ten basic long distance calls were thrown on the screen. So this training element, a series of overlapping calls which thread the film together, is framed by a believeable story-situation which makes the most experienced *want* to look closely at the action.

Linda's problem *needs* an answer. New to Mark Sensing techniques, she's concerned about loss of speed. She turns to friendly Billie Mead who doesn't know the answer either, until she analyses that series of ten calls and finds that Linda's "answer" is the "something more" she herself has been doing. That is, simply, "keeping one jump ahead."

The script for *Answer for Linda* was converted into a complex chart with every movement and sound detailed with utmost accuracy. Closeups and action along with switchboards were handled with great technical skill. The result is a highly-effective film, justifying itself many times over in greater operator efficiency and resultant customer satisfaction.

Helping Linda Find the Answer:

At Right: troubled Linda (played by Pat George) is concerned about her speed and turns to friendly Billie Mead for answer. Billie finds it to be "keeping one jump ahead."

* * *

A Challenge in Production:

At right: basically black switchboard would normally film as "nothing" but Parthenon's crew met problem by creating reflections, filming "bounce" of cross-lighting off black surface.

COKE'S 75th BIRTHDAY

Dramatic Presentations Translated Merchandising Principles to Practical Application as Coca-Cola's Worldwide Bottler Family Convened in Florida

ORIGINAL MUSIC, COLORFUL SETS with revolving stages, treadmills, giant rear-projection screens and a professional cast of twenty-five Broadway performers combined in Miami Beach this month to mark the 75th anniversary convention of bottlers of Coca-Cola.

The Coca-Cola Company, hosts for the spectacular three-day dramatic musical presentation for bottlers, worked with The Jam Handy Organization to pull out all the stops to create a hard-hitting sales-and-entertainment show which turned out to be the biggest industrial convention ever held in Miami Beach —a city that has seen some big ones!

A "Milestone" in the Company's History

Patrick L. O. Malley, vice-president and general sales manager of The Coca-Cola Company termed the convention presentation a "milestone" in the history of the well-known soft drink firm.

There are more than 1,000 bottlers of Coca-Cola in the United States. Nearly 4,000 people arrived in Miami Beach for the convention. Officials of The Coca-Cola Company pointed out that this was the first such "national" convention of bottlers since 1948—and by far the biggest yet.

Usually five or six regional conventions for bottlers are held on alternate years. Casts, crews, scenery and Company personnel move the convention around the country much in the manner of a large traveling show company. This time, however, since Coca-Cola is celebrating the 75th anniversary of its birth this year, the company decided to stage a single large national conclave.

Convention scene reflects the enjoyment shared by a 19th Century group as they were introduced to the now internationally-famous beverage.

At the left: it takes a lot of "gear" to produce a big convention show. Backgrounds for scenes were rear-projected on giant screens.

Produced by The Jam Handy Organizatio

Overall production was handled by [illegible] Handy which stages most of the special m[illegible] ing and convention activities for The C[illegible] Cola Company. Work began early in 196[illegible] members of the Company's Bottler Sales [illegible] motion Department under the supervisio[illegible] Sam N. Gardner. The basic structural outl[illegible] of the convention presentations occupied [illegible] better part of 1960 since most of the mat[illegible] to be presented had to be based on the ov[illegible]

The opening sequence, "American Heritage" [illegible] traced early history and principles which [illegible] birth to the nation's free enterprise sys[illegible]

marketing strategy for Coca-Cola throug[illegible] the next few years—and marketing strat[illegible] has a way of defying any finalized plans.

Two professional script writers from [illegible] Handy plus a squad of promotion speci[illegible] in The Coca-Cola Company hammered [illegible] the sequence of scenes and basic ideas t[illegible] presented. Gradually through the spring [illegible] this year separate staging requirements b[illegible] to emerge. Some parts of the presentat[illegible] seemed particularly well suited to mu[illegible] treatment so musical director Maurice Le[illegible] and songwriter Wilson Stone began to b[illegible] out musical sequences with director M[illegible] Stanley and choreographer Gene Bayliss.

Cast Had to be Versatile . . . and Tall

A semi-final script reading was given [illegible] officials of The Coca-Cola Company a[illegible] headquarters in Atlanta during August. R[illegible] after Labor Day, auditions were begun in [illegible] York giving actors who had summer com[illegible] ments a chance to try out for the show.

The cast was unusually large for an in[illegible] trial show — twenty-five in all. Most of t[illegible] had to have talents which included ac[illegible] singing and dancing. An additional desi[illegible] feature, especially for male members of [illegible] cast, was height. Because of the huge siz[illegible] the Miami Beach Convention Hall stage [illegible] of the men eventually chosen for the [illegible] ranged in height around 6′ 2″ or better ma[illegible] ing it perhaps one of the "tallest" casts [illegible] assembled.

Intensive rehearsals began immediatel[illegible]

Right: the entire chorus joins in on the special musical arrangement for Walt Whitman's poem, "I Hear America Singing," which was written for the anniversary convention show, climaxed segment.

It's the "Pause That Refreshes" as Coca-Cola's Bottlers Enjoy Stirring, Original Music and Over 100 Dramatic Show Sequences

Left: the familiar "Coke" trademark was translated into many languages as musical scenes depicted worldwide markets. Here, the screen presents Chinese version as singer tells growth thru Orient.

New York rehearsal halls even while final script revisions were being made. Set designer Wm. Morton began construction of special scenery. The unusual length of the script — approximately equal to four standard-sized Broadway musicals—imposed a severe problem on actors who had to memorize parts sometimes longer than normal dramatic plays. In addition they had special songs and dance routines weaved into more than 100 scenes. Six original songs — words and music — were written for the show. Also a special musical arrangement was composed for the Walt Whitman poem "I Hear America Singing" which formed part of one of the sequences.

A week prior to the opening of the convention the entire cast and crew moved into Miami Beach for final technical and dress rehearsals. Also executives of The Coca-Cola Company, who had special parts in many of the dramatic and musical sequences, had to be rehearsed in their parts.

On October 9 at 9:30 A.M. stage manager Gene Perlowin raised the curtain to the familiar strains of the famous Coca-Cola theme song, and the show began.

For three days, four hours a day, twelve full hours in all, the show unfolded. It traced the history of Coca-Cola from the iron kettle of Atlanta pharmacist Dr. John Pemberton in 1886 to the most widely recognized and advertised product on earth. It presented facts and figures about growth and marketing opportunity and presented new plans for the future. The cast and producers received a standing ovation as the final curtain closed.

Right: lively dance numbers added color, excitement to each sequence, helping bring into focus new opportunities for salesmanship by Coca-Cola bottlers. This "Cheerleader" once sequence was one of convention show's musical highlights at Miami Beach . . .

Film Helps Tell Berlin's Story:

Media and Truth Serve the Cause of Freedom

by Edward R. Murrow
Director, U. S. Information Agency*

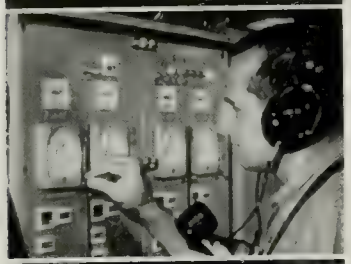
THERE RESTS UPON ALL OF US today a sane sober sense of our "awful responsibility." Discharging our small portion of that responsibility is the task of the United States Information Agency. We are engaged in that difficult to define area of telling our tale abroad and putting our policy plainly but precisely in the primary terms of understandability. If this country believes that the end of the day will be carried not by force of arms but by force of persuasion, the job we do is a key to our very survival. I for one am persuaded that we have no alternative: we must persuade, or perish in the attempt.

And so it is that we undertake to explain the terms of our existence to the species of man inhabiting this minor planet. We broadcast radio. We make films. We produce television. We wire-service local papers, print magazines and newspapers, and circulate pamphlets. We distribute books. We run libraries and information centers. We teach English. We package traveling exhibits, sponsor exchanges, seminnars, and cultural groups. We seek to persuade foreign editors. We consult foreign cabinet ministers. We talk to university students. In the process, we seek to convince that the goal we seek is a guide for enrichment and not a guise for enslavement.

It is this, I suggest, that makes this generation of Americans a rather unique strain of that unique animal called man. We seek not foreign dominion, not self-aggrandizement, but only the realization of those things in life that other peoples would have for themselves. Does anyone doubt for a moment that with the power this country can marshal and the pressure we can focus that we could command the destiny of man if we so chose? It is a tribute to our way of life that we have chosen to let man choose his own destiny.

And therein lies the nut of our difficulties. It is simple to impose one's own will by force. It is far more bedeviling to let those wills develop as others would will them.

Our adversary crushes freedom. We build it. Our adversary snuffs out the flickering fires of free choice. We seek to light them, then keep them glowing. Our adversary promulgates a premise of power. We postulate a precept of inviolate individuality.



It is this that sets us off from our opponents. And it is this transmission of our hopes and our dreams that engages my colleagues and me in the long execution of our many appointed tasks. We truly labor in the service of an ideal. Our days are long. I myself have never worked

(CONTINUED ON PAGE SIXTY-ONE)

*excerpts from the address by Mr. Murrow before members of the Public Relations Society of America at Houston, Texas on Monday, November 13, 1961.

SPONSOR: Sperry Gyroscope Company (Division of Sperry-Rand Corp.)

TITLE: *X Marks the Spot*, 15 min., color, produced by Telic, Inc.

☆ From the depths of the sea, the missile-bearing Polaris nuclear-powered submarine is within firing range of 90 per cent of the world's population and industry. With its invulnerable underwater base, the Polaris launching pad covers 140 million square miles. It is an extraordinary weapon that becomes even more extraordinary in the light of the accuracies involved.

To strike its unseen target, the Polaris submarine must know within a matter of yards where it is under the sea . . . within a fraction of a compass degree of which direction it faces, for a single degree in direction will throw the missile 20 miles off course.

Has "Sense of Navigation"

The navigational accuracy of this awesome striking force is the subject of a new film just released by the Marine Division of Sperry Gyroscope Company. It shows that of all the technical achievements that have gone into this weapon system none is more important that "the sense of navigation" built into the submarine by Sperry Gyroscope engineers.

X Marks the Spot documents some of the background of the Polaris project—in which a nationwide team of 7,000 industrial contractors built Polaris in the shortest time ever for a major missile system. Sperry's work was concentrated on the Gyro Navigator, a truly fabulous instrument — ultra sensitive to motion, oriented to the universe and the heart of the world's newest, most accurate navigation system.

Work in Land-Locked Hull

The film describes steps in the development of the system: the gyroscope itself, the NAVDAC computer to provide navigational crosschecks, and the Navigation Control Console which ties in electronic navigators and computers of the submarine with their human counterparts.

At one point where it became absolutely necessary to have a submarine to work in—when none were available—a landlocked hull was built in the midst of the residential skyline of Long Island. Yet, the savings which ensued from experimental work on star-tracking periscopes in this hull more than paid for its cost.

Chet Huntley, one of the narrators on *X Marks the Spot* leaves us with this message: "With no fixed location, hidden beneath fathoms of water, the Polaris brandishes the threat of instant retaliation to any would-be aggressor.

PROJECT POLARIS

The Navigational Accuracy of America's Nuclear Submarines Is Documented in This Sperry Picture

Talking over Polaris' film scenes are (l) C. William Whall, marketing mgr. of Sperry Marine Division and (r) narrator Chet Huntley . . .

The ultimate test of the Polaris system is continued peace. For if it is successful in the fullest sense it will never have to be used."

* * *

A Fine Co-operative Effort

☆ *X-Marks the Spot* was made by the co-production team of Sperry Gyroscope's William Mount, who originated the concept and script treatment, and Telic, Inc., New York specialist company in co-production. It was written and narrated by Telic staff writer Will Sparks (Chet Huntley—on a[n] era—narrated opening and c[lo]sequences), under the super[vi]of the producer-director tea[m] Elwood Siegel and Edward B[ig]ton.

Telic partners Woody [Ge] and Ed Boughton have long [sp]cialized in solving unusual pr[o]tion problems for sponsors, [ag]cies and even for other prod[uc]In this case it was necessa[ry] combine never-before-used [ar]mentary footage of the U. S. [Na]with the tough problem of s[pa]ing—in color—in the extr[em]narrow confines of subm[ar]hulls, yet with maintenance [of]quality lighting.

Special Lighting Was Devis[ed]

Ed Boughton, who di[rec]these interior shots, had to [de]his own miniaturized, contr[ol]lighting system, shoot in [a] wide-angle, but avoid the inherent[ly] tortion often produced in clo[se]-wide-angle work. He has [suc]ceeded admirably.

Several channels of distributi[on] are planned for the film. It [will] shown to armed forces servi[ce] ganizations, prints will be [al]available for public service [tel]sion programs, and prints [ha]been supplied to the Navy.

Sperry Gyroscope's self[-in]est in the film is to make [it] clear as possible that navigat[ion] the key to the whole missil[e] tem, and that the company [is]

☆

At right: underseas navigators on the Polaris submarine Theodore Roosevelt are the picture of concentration as they check a new control instrument — Sperry Gyroscope's Navigation Control Console. Short Film from Bissell Offers "First Aid to Mother"

Bissell, Inc. is getting its sales message across to women in a 4½ minute color film produced by Victor Kayfetz Productions, Inc. To show Bissell products in use — floor scrubber, vacuum clean-er, upholstery cleaner and carpet sweeper — *First Aid to Mother* relied a story around a busy woman about to start a clean-up operation after a children's party. The house is in disarray. The phone rings and Hubby informs her that he is bringing a guest home for dinner.

Thanks to the Bissell products, the busy mother gets the house cleaned with time to spare.

MOVIES HAVE COME A LONG WAY...SEE HOW FAR AT PAN AM'S FILM FESTIVAL

PAN-AMERICAN WORLD AIRWAYS ADROITLY PROMOTES FIVE TRAVEL FILMS

FIVE NEW FILMS were previewed by Pan American World Airways at a Film Festival in the Johnny Victor Theatre, New York, November 1st. The five: *Pink Sand, Blue Water;* on Bermuda; *Turkey; Ski New Horizons; Hong Kong/Singapore;* and *State* 50, on Hawaii, were presented on three different film gauges to show the broad range of media that Pan Am's travel film series now serve.

Show in All the Dimensions

For instance, *Turkey* and *Ski New Horizons* were shown in 35mm Cinemascope, as for their theatrical destinations. *Pink Sand, Blue Waters* was shown in 16mm. Other pictures were shown in 16mm and in the Johnny Victor anteroom on Fairchild 8mm Cinephonic projectors, as well.

Each film was introduced by a pretty girl from the New York office of the travel bureau of the country pictured, and dressed in "native" costume — such as Bermuda shorts.

Reach 150 Million Each Year

Pan Am now provides film showings for 150 million persons a year, according to Admiral H. B. Miller, the airlines director of public relations. In addition, 35mm Cinemascope travel films are produced by both 20th Century Fox and Universal-International in collaboration with Pan Am for the theatre circuits here and abroad, and reach an audience of 250 million persons a year.

Admiral H. B. Miller, Director of Pan-Am's Public Relations, introduced film festival offerings . . .

With 32 titles and 3,000 prints in distribution, Pan Am's film library is the travel world's largest. Standards for the promotion films are set by Willis G. Lipscomb, Pan Am's Vice President, Traffic and Sales, and the program is administered by Murray Barnes, Director of Advertising.

Michael Krupnick, Manager-Special Features, directs the world-wide film program assisted by Florence Mouckley, Manager-Films, who keeps close rein on thousands of 16mm subjects in constant circulation and 16mm and 35mm subjects in transit to television stations and theatres.

* * *

How to Promote the Medium

☆ Some of the most interesting and well-designed promotion pieces to cross our editorial desk in a long while, preceded and publicized this recent Pan-Am film "festival."

In addition to a colorful descriptive folder, there was a fine setup of a response card and the mailing included a pair of attractive "ducats" for admission to the Johnny Victor Theatre.

The company's Public Relations Director (Admiral Miller) took time out to personally welcome the previewers and, as noted, there were those comely girls in appropriate costumes who introduced each of the pictures. Variety of projection, excellent promotion and interesting pictures combined to set a fine example of the art of sponsored film previewing.

This comely lass helped to introduce "Ski-New Horizons" picture.

And this miss in Turkish garb preceded "New Horizons-Turkey."

"New Horizons-Hongkong & Singapore" brought on this Oriental miss.

Jet Terminal: a visit to Idlewild

Design Speaks For Itself as This Color Picture "Tells" a Warmly Human Story

ONE OF THE MORE unusual business sponsored films now being shown to school and club audiences across the country is *Jet Terminal*, Pan American World Airways new motion picture on the airlines' recently completed terminal at Idlewild Airport, New York.

Aside from a brief, one-line introduction and closing, this 18-minute, color film has no narration or dialogue, and contains a major sequence of dramatic action photographed at eight frames per second — or, so it seems, several frames faster than the Keystone Kops.

Pointing Up Terminal Services, Features

When Pan Am originally asked Coleman Productions, New York, to create the film, Michael Krupnick, Manager Special Projects, specified that the picture had to be different — as bold and exciting as possible in line with the advanced design of the airline's new building.

Pan Am wanted to point up the many ways in which the terminal serves the public and its many unique features such as its cantilevered roof under which planes can pull in to protect the traveler in bad weather.

During weeks of preliminary research, writer Harvey Yale Gross interviewed all pertinent Pan Am officials and the architects, engineers and designers of the then-unfinished building. He personally explored the place floor-by-floor and space-by-space from top-of-the-roof to bottom-of-the-basement.

At the end of this research Gross had filled a fat notebook with a million facts: the number of tons of sand holding the roof down, why the building had the largest air curtain, why it was the greatest this and the most impressive that. Then he threw the book away.

Building Design Can Stand On Its Own

What would have resulted, he thought, would have been an architectural film filled with the right statistics, interesting architectural shots taken at odd angles that an audience would sit through, be impressed by, and

This appealing youngster nearly stole show!

—and a film to promote air cargo

ONE OF THE MOST IMPORTANT problems of progress is how to reduce the gap between new facts and old attitudes. In an industry, the "physical retooling" needed to exploit technological advances can generally be accomplished far more rapidly than the complementary "mental retooling" of personnel or customers.

With the large-scale deployment of jet fleets, air cargo transport has advanced to the point where it now offers an entirely new concept of international marketing. Yet full acceptance of the concept, and full utilization of its potential is hampered by a lingering image of air shipment as mostly suited either to emergency situations or to the delivery of highly perishable merchandise.

For Customer Showings by Cargo Salesmen

To help its Cargo Sales Personnel show customers how modern air transport opportunities far outweigh traditional objections, Pan American is using a new motion picture . . . *World Marketing in the Jet Age* . . . produced by Henry Strauss & Co.

The film . . . which runs twenty minutes in color . . . is designed primarily as a sales promotion tool but is also intended for internal training. It has a number of separate, but interlocking, themes . . . and interweaves documentary with photoplay techniques for presenting its message.

From the starting point of a typical medium-sized company, whose operations in the international market are hampered by delayed deliveries, the film shifts to fascinating footage of far Eastern cart and camel transport . . . to dramatize the enormous historical change in the problem of getting goods from producer to consumer.

Entire World's a Merchandise Counter

It illustrates the constantly accelerating pace of market expansion that has made the entire world a shop counter for the distribution of any manufacturer's merchandise . . . and shows how this has created a *competitive* situation where even the most non-perishable products can become "perishable" if they arrive "too little or too late". Skipping over the centuries, we move to the twenty-four-hour day of modern jet transport, where under floodlight and sunlight a never-ending stream of cargo ranging from fragile earthenware to mammoth cash-movers enters a globe-circling aerial pipeline.

This visually exciting depiction of Pan Am's technical facilities and highly trained manpower sets the psychological stage for introducing a major concept . . . how distribution can become a vital competitive asset . . . and how advanced *methods* of distribution can make possible advances in production, packaging, merchandising, marketing, sales promotion, and many other facets of a company's operation.

Returning to the specific problem with which it started, the film picks up a Pan Am salesman as he makes his presentation to an interested, but skeptical, audience of company executives. Here he meets one of the key hurdles in selling air cargo . . . the fact that on a simple "cost-of-carrying" basis the expense *seems* to be prohibitive in any but exceptional cases. To overcome this objection he uses *two* lines of reasoning.

Dramatic night scene shows the loading of "Clipper Cargo" on one of Pan-Am's huge transports.

World Marketing in the Jet Age

Visualizing Its Advantages, Pan-American Bids for Overseas Air Cargo Business

Noting Other Overseas Distribution Costs

First . . . as the salesman points out, *shipping* costs, by whatever means, are only a *part* of the real total cost of overseas distribution. Other cost-factors that may be hidden in the way bill, but turn up in the company's overall expense accounting, include such items as: inventories (both domestic and overseas); warehousing charges; packaging costs; insurance rates; and liquid capital, available in larger amounts because of speedier delivery of merchandise.

These, and similar dollar-saving factors, not only help to balance the discrepancy between air and surface *shipping* costs . . . they lead to the second major sales point . . . how air cargo opens entirely new overall marketing possibilities.

Smaller inventories of any given item permit a more varied inventory of many different items . . . hence a more flexible merchandising policy geared to meet swiftly changing market conditions.

Lighter packaging and less in-shipment handling can help to eliminate production problems, since items designed for export can be handled with the same procedures as those for domestic sale.

Lower insurance rates, savings in warehousing, and less money tied up in merchandise which is non-productive while in transport, open new and enlarged purchasing opportunities.

Speed of shipment allows delivery, maintenance, and replacement commitments previously impossible . . . hence more attractive sales promotion prospects.

Below: an automobile goes abroad in the hold of a Pan-American Boeing 707 cargo "Clipper" in this scene from "World Marketing" film.

Three Advantages of Jet Cargo Service

And . . . added to these general advantages of air cargo . . . the film points up these three specifics of Pan American Jet Cargo Service:

1. World-wide *information* facilities from 114 trade centers in 80 foreign countries to relay up-to-the-minute facts on fast-breaking market developments and opportunities.

2. World-wide *transportation* service for exports and imports to any place in North America . . . with a single documentation procedure to cover all handling.

3. World-wide *representation* facilities with Pan Am agents available to supervise shipments and represent the shipper with the advantages of full familiarity with local regulations and practices.

Though it provides much specific information, *World Marketing in the Jet Age* should be equally useful from the standpoint of the *questions it stimulates* . . . giving the salesman the opportunity to provide individualized *an-*

COLOR COLLAGE

A Prize Kodak Picture Shows the Role of Creativity in Photography

How Do You Tell the story of creativity, a highly subjective matter rooted deeply in the imagination?

Well, one approach is to tell it without a plot, in a serving of colorful fragments blended together into an artistic composition of incongruity.

That's what *Color Collage* does in its 20-minute tribute to the creative ability of the nation's art directors and photographers and their use of color photography in advertising.

The purpose of the 16mm color sound film is simple enough—to spotlight the talents and accomplishments of two highly artistic professions.

Planning and production of the film were far from simple, however. They represented a bold, daring experiment in challenge, an appeal to the imaginations of some very [illegible] inative people. Stan Sobel's script wa[illegible] launching point for this eye-provoking [illegible] motion picture.

The result is a free form mixture of [illegible] and ideas, a mixture which seeks to ju[illegible] imagination with fantasy and whimsc[illegible] providing a rare visual stimulus.

Although the movie is "plotless," the[illegible] sage it leaves is clear:

"Creative Idea Must Be the Birthpla[illegible]

"The creative idea must be the birt[illegible] of distinguished and effective advertisin[illegible] ideas without communications are hardly r[illegible] ful motivators in the market place."

More specifically, the viewer is rer[illegible] that photographic color has long been [illegible] cessful medium as a story-teller, becau[illegible] reader of advertising finds in it a fa[illegible] realistic, and trustworthy describer.

The reader is familiar with photo[illegible] since its images are all around him—o[illegible] vision, in the snapshots of his childre[illegible] activities, and editorially, in his magazin[illegible] newspapers. He regards it as realistic anc[illegible] ful because he has been conditioned to [illegible] graphic proof.

Experience and Talent Make the Marr[illegible]

But the point is made in the film that [illegible] photography's reputation for realism, t[illegible] perience and talent of both photographe[illegible] art directors have married beauty, moo[illegible] emotional impact to the once literal ima[illegible]

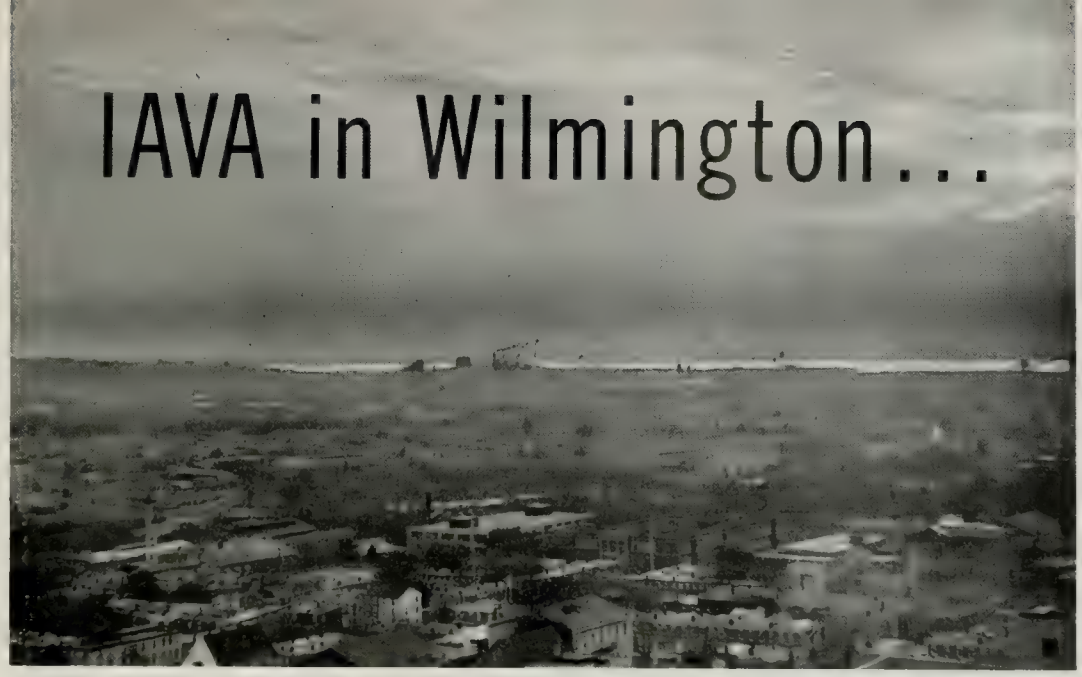
Moreover, the film shows that color p[illegible] raphy can now execute almost any creati[illegible] in a multitude of ways, without sacrific[illegible] most important ends of the advertising[illegible] entation—reader recognition and acce[illegible]

Several high-key, high-quality still p[illegible] were used in the production to achiev[illegible] usual vignettes. Patterns for the vignette[illegible] made from cotton, sprayed with a dullin[illegible] pound to produce the right light intensit[illegible] moved about until the desired effect [illegible] tablished.

"White on White" Shots Are Most Dra[illegible]

Some of the most dramatic sequences[illegible] film are white on white shots, an ext[illegible] difficult technique for movies. These [illegible] made by directing high-powered lights i[illegible] background to overexpose it, while main[illegible] foreground lighting at aperture level.

Color Collage was filmed in Kodak [illegible] chester, New York studios. Still photo[illegible] animation for the movie were prepar[illegible] Visualscope Inc. in Manhattan and co[illegible] importantly to its interest.



The film is now available free of cha[illegible] group showing to art directors clubs, [illegible] sional photographic organizations, [illegible] arts societies, advertising agencies, art [illegible] ies, educational institutions, business, i[illegible] and other interested groups.

To schedule bookings of *Color Collag*[illegible] to the Professional Sales Division, E[illegible] Kodak Company, Rochester 4, New Yo[illegible]

In the Pictures (top and bottom): these w[illegible] white shots helped win Golden Mercury [illegible] for "Color Collage" at the Venice Film [illegible]

IAVA in Wilmington...

Wilmington, Delaware is an "early" town . . . and the day's work begins at almost dawn these late fall months.

DU PONT HOSTS FALL MEETING OF AUDIO-VISUAL EXECS

RECORD NUMBER of members of the Industrial Audio Visual Association r on hand for this year's Na n Fall Meeting, held at the Pnt Hotel in Wilmington. lware, October 23-26. Over 50 nanies were represented by i audio-visual executives.

Vlmington—"an 8 AM town" a the program announcement dtated—was an appropriate g for the fall workshop meet- f industrial audio-visual ex- ves, who maintained a fast- d schedule of activities begin- at shortly after 8 AM and go- n after midnight, daily.

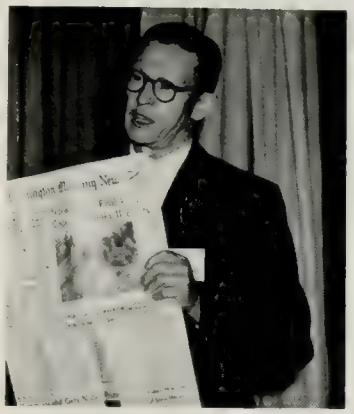
Acting as host to the IAVA p, Alden H. Livingston, of the Pnt Company, provided a ajifully-mounted setting for the ngs organized by Program a rman Daniel Rochford

Livingston, of the duPont many, was fall meeting host.

tdard Oil NJ), with his com- ttemen Frederick Beach (Rem- gtn-Rand), William Connelly Ion Carbide), Frank Rollins qibb), and Mr. Livingston.

Rom Becomes A-V Workshop

Te duPont Hotel's duBarry o was efficiently transferred o a first-class audio-visual rshop featuring a large rear- ojction screen set in handsome tned wings and concealing a l attery of audio and visual uipment faultlessly operated oghout the meeting by du- n AV men Bill Davis and Jay nnings.



Eht new members joined the sciation during the meeting: te Crane (Johnson's Wax), ed Lloyd (American Republic surance), Kenneth Morton (Al- a C. W. Ryan (Idaho Power), rd Sherman (Schering), Jo- h Stanaland, Jr. (Southern ll Ira Thatcher (United Air- es, and Charles Woehrle (Min- sc Mining).

Alden Livingston (duPont opened the morning session on October 24 by orienting his fellow members on the city of Wilmington. He described some of the activities of his company's motion picture department, of which he is manager, and displayed some brief samples of the department's recent projects.

President Outlines Objectives

Objectives of the conference—"Increasing Management's Success in Its Relations With Customers, Employees, Owners, Governments and the Public Through Better Audio-Visual Communications"—were outlined by IAVA President Kenneth Penney (Minnesota Mining).

Program Chairman Rochford introduced Henry T. Claus, Board Chairman of the Wilmington *News-Journal,* who officially welcomed the IAVA group, meeting for the first time in Wilmington.

Dan Rochford (Standard Oil, N. J.) was chairman of fall program; introduced newspaper chairman.

Robert K. Daker, President of Seminar, Inc., got the workshop program under way with a talk about new advances in "ASIIB"—*Automated Self Instruction in Business.* Mr. Daker, a leading authority on programmed learning for many years, said that an important problem of our educational system is that while we may occasionally have five million unemployed people in the United States, there are seven million jobs looking for the right people to fill them. Our 40 billion dollar educational system does not seem to be training people for the available jobs.

Industry Must Teach Math . . .

The solution, Mr. Daker said, may be that industry will have to take on more and more of this educational process—start teaching higher math to ordinary guys be-

Below: learning how visuals are brought to under-developed countries via sun-powered projection are (l to r): Frank Rollins (Squibb); Bill Davis (Nationwide Ins.); Ralph Fairchild (LeTourneau) and Al Yost of Bethlehem.

WHAT'S AHEAD IN AUDIO-VISUALS:

(CONT'D FROM PRECEDING PAGE)
cause the schools have not. He cited a recent FORTUNE prediction that the corporation of the future will be an educational institution. It will spend most of its time training people to run its increasingly automated factories and computer systems.

The change in education, Mr. Daker predicted, will be away from an expository form into one of programmed stimulus and response. It has been found that a man will learn faster and better if he is made to constantly respond during the learning process.

Such concerns as Eastman Kodak and IBM are now using automated learning procedures with some degree of success, Mr. Daker said. In programmed instruction an important consideration is that "classes" may be individual—easily fit in with the regular work schedule, and permit each student to go at his own pace.

However, although automated learning is making fast advances, we still have many problems to solve. There are great "horrors" of teaching machines—with many mechanical problems, great difficulty in handling, and there is much floundering in method between opposing schools of thought. While the audio-visual machines have their problems, the "scrambled books" have others. Mr. Daker said he believed audio-visual men have great contributions to make in automated teaching. He urged IAVA members to consider the problems and start working on the answers.

Ira Thatcher, United Air Lines, showed film on his audio-visual activities. **Below:** Peter Crane, S. C. Johnson, gave witty talk.

Branch Reports on 8mm Sound

Eyre Branch, recently with Standard Oil (NJ) but now retired and an audio-visual consultant and head of his own firm, Noel Enterprises, presented an illustrated round-up of the latest information on 8mm sound. He pointed out that over 34 pieces of 8mm sound equipment are now "on the market" but with greatly varying degrees of availability.

Two new pieces of 8mm sound equipment which are available are the Fairchild Cinephonic and the MPO Videotronic 8, both repeater projectors, which were demonstrated by Richard Goldberg, of Fairchild, and Judd L. Pollock, of MPO. Both of these machines are now going out in good quantity to industrial users.

Bill Pratt of AT&T gave "Plan to Inform Management About Film Effectiveness" in his talk.

Education and Training Abroad

Gale C. Griswold, of the International Cooperation Administration, a featured speaker at the luncheon on October 24, told of the problems of educational and vocational training systems in many undeveloped countries where audio-visual aids would be able and efficient "teachers where power for projection is unavailable.

One solution to the problem was invented by an ICA man in Afghanistan who put together a rear-screen stripfilm projector fashioned from the ever-present five gallon oil can, a spectacle lens and a simple mirror to reflect light. The whole thing was put together with these universally available materials at a cost of less than five dollars. In operation the projector is placed so that

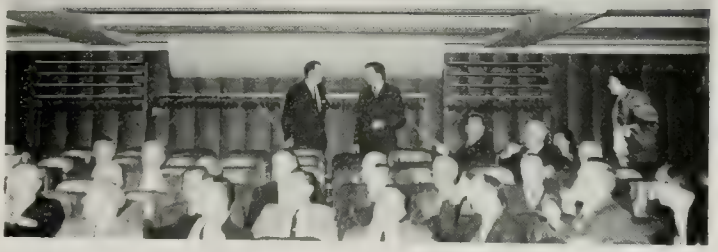
history presentation of how the Elastomers Department solved a sales-service problem. One of the solutions, a motion picture, *A Report on duPont Elastomers,* was screened during the presentation. A tour of the laboratory followed, with hosts Andrew "Red" Ballantine, Don Forman, and Bob LeComte, of the Elastomers Department, leading the way.

After a short trip along the historic banks of the Brandywine River, the IAVA group visited a

Night session: Aldie Livingston points to duPont booth as chairman Dan Rochford takes breather.

notable museum with an outstanding use of audio-visual displays. The Hagley Museum documents life along the Brandywine in early times and shows the emergence of the first industrial pioneers in the paper, flour-milling, iron and gunpowder trades. The museum integrates motion pictures, slides, recordings and other audio-visual tools with extraordinarily beautiful and complex working models.



Past—Prologue to the Future

IAVA's Fall Banquet looked both backward *and* forward. James Craig (General Motors), IAVA Vice-President and Historian, recounted some of the highlights of past conventions and workshop sessions of the association, enlivened by filmed episodes of a meet-

Below: IAVA president Kenneth E. Penney spoke on future needs . . .

At nightly sessions like this, keenly-interested members continued discussions until after midnight hours. At this session, Alden Livingston demonstrated facilities, activities of duPont's Motion Picture Department.

Jay Cummings and Bill Davis of the duPont Company's Motion Picture Department handled all projection arrangements — provided fall meeting guests with some of the most professional showings in the association's history.

ing several years ago in the Twin Cities. Kenneth E. Penney (Minnesota Mining), IAVA President, looked ahead to many of the audio-visual advances we may expect in the not too distant future.

IAVA's sessions on October 25 were devoted to member reports, case examples and interchanges of experiences which have proved so valuable to members in past meetings. Two of the reports presented: Sheldon Nemeyer (General Dynamics), on the audiovisual center, and William J. Connelly (Union Carbide), on visualizations for pre-testing scripts, have since appeared in BUSINESS SCREEN. Another interesting report — from William Buch (Lederle Labs), on an exciting new visual tool, the Scrollfilm, will appear in an early issue.

Evening Round-Robin of Films

On the evening of October 25, IAVA members and guests met in the duPont auditorium for a round-robin film showing, under chairman Fred Beach (Remington-Rand), that went on until the early hours of the morning. These screenings are indicative of the shirt-sleeve aspects of much IAVA work. Many members brought films to show, and each was followed by a general critique of content and style.

Between the acts of this session the IAVA group was treated to an inside-look at the duPont motion picture department's offices and exceptional working rooms. Alden

Below: three family groups attended fall banquet. The Alden Livingstons are at left; Mr. and Mrs. Vincent Hunter (UP) center; Mr. and Mrs. Bill Reynolds (Michigan Bell) at extreme right. (All photos by Bob Seymour)

Sheldon Nemeyer, General Dynamics, presented a slide show describing his company's new a-v center.

Jerry Curto, of Santa Fe Railroad, described company's speakers bureau, its effects on public relations.

Joseph Stanaland, PR supervisor at Southern Bell, was an active participant in member report sessions.

INDUSTRIAL A-V EXECUTIVES MEET:

(CONT'D FROM PRECEDING PAGE)
Livingston and his staff have their facilities near the auditorum, which they also operate. The auditorium booth has 35mm and 16 mm motion picture projection equipment, slide and slidefilm projectors of many sizes, and one of the most-used visual aids in the place—an overhead projector with 40-inch lens for the long throw in auditorium use. Mr. Livingston, whose audio-visual activities on a production or consulting basis extend "across the board" for du-Pont, showed efficient new posting systems for film distribution control, closed circuit television room providing TV facilities for the managers of the company's advertising departments, and other facilities in use at this leading industrial audio-visual establishment.

Keeping Management Informed

Opening the session on October 26, Willis H. Pratt, Jr. (A.T.&T.) presented "A Plan to Inform Management About Film Effectiveness." Mr. Pratt advised his conferees to keep track of the positive aspects of their work, keep records of the good effects of film activity, both in physical audience statistics and in psychological studies of how audio-visuals do an information job. All this material, he said, should be regularly presented to top management through every channel available and at every opportunity.

New Kodak Films and Equipment

John Flory, Eastman Kodak's chief liaison with the Industrial Audio-Visual man, told "What's New at Kodak." New: Kodachrome II, a magnificent new emulsion for all original 35mm slides and 16mm and 8mm original movies. Unfortunately, the film won't duplicate properly yet. There are difficulties in magenta and contact control not yet solved. But this sharp new color film, in good supply for original use, may offer many advantages which will show in the future for mass-production duplicated color materials.

Kodak has a new Model 350 16mm projector for television use which provides sharper TV pictures and is said to eliminate scratches on film during projection.

Mr. Flory showed the new Carousel slide projector which automatically shows 80 slides in a cartridge; a new Pageant 16mm sound projector; and a Viscomat 16mm film processor, which processes film from "dry to dry" in only one minute. The Viscomat will cost about $12,500 and will be available probably in April 1962.

A new Kodak 16mm Reflex Special Camera is now on the market with a host of features designed to make it competitive with other high quality cameras. It will be sold direct by Eastman Kodak. Many accessories for the camera will be manufactured and sold by Camera Equipment Company.

Echo's Role in Communication

W. L. Ritter, of Bell Telephone of Pennsylvania, demonstrated—through a model microwave transmitter and receiver—how the Echo satellite will facilitate intercontinental telephone and television traffic. He said that in 20 years existing cables will be unable to meet traffic demands and o system such as Echo will b to do the job. The Bell S companies hope that their e ence and know-how will be work doing this job.

Dr. Joseph A. Tucker, U. S. Industries, Inc., spok "Industrial Applications of tomated Learning Today." described how automated le

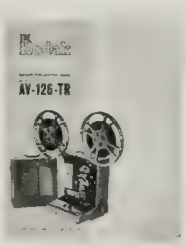
"We can show prospects MORE with movies than in a live demonstration"

ys.. A. DePolis, Vice President in charge of rketing, LeTourneau-Westinghouse Co.



"e solve two major selling problems with d Pageant Projectors like this one. One is : roblem of showing our equipment, which igs as much as 38 tons, to as many prosctas possible. The other is the problem of ukg maximum use of every minute spent :hne prospect.

"Br example, surveys show that the average esan spends only 61 minutes per year with :hidentified buying influence. As our earthvig equipment becomes more and more mjex, it becomes increasingly important to make those minutes count! Instead of our salesman using his time to bring the prospect to the machine, or spending a lot of money to bring the machine to him, we do the job better with our kit of 11 sales films.

"We had definite reasons for choosing Kodak Pageant Projectors to do these jobs for us. First, we needed a rugged projector—one that wouldn't break down on an executive after he had taken it halfway across the country. We bought Pageant Projectors because we thought they were the most rugged and dependable, yet quiet. We wanted a projector that wouldn't startle a conference group when it was turned on.

"Now that we've been using our Pageant Projectors for a while, we've found three big advantages over any other projector: (1) they're simple and functional in design; (2) easy to set up and use—with minimum instruction; (3) a fast, foolproof rewind system."

Your Kodak Audio-Visual Dealer will demonstrate these and other Kodak Pageant Projector advantages. Or write us for Bulletin V3-65, which describes the new Kodak Pageant AV-126-TR, with its all-transistorized amplifier for instant sound start-up and maintenance-free sound system.

A Picture Helps Sell Art Appreciation

"What Is a Painting?" Builds Home Study Seminar Business

THE BOOK - OF - THE - MONTH Club's current motion picture, *What Is A Painting?*, dispels the idea that "free films are great for public relations but you can't sell anything with them."

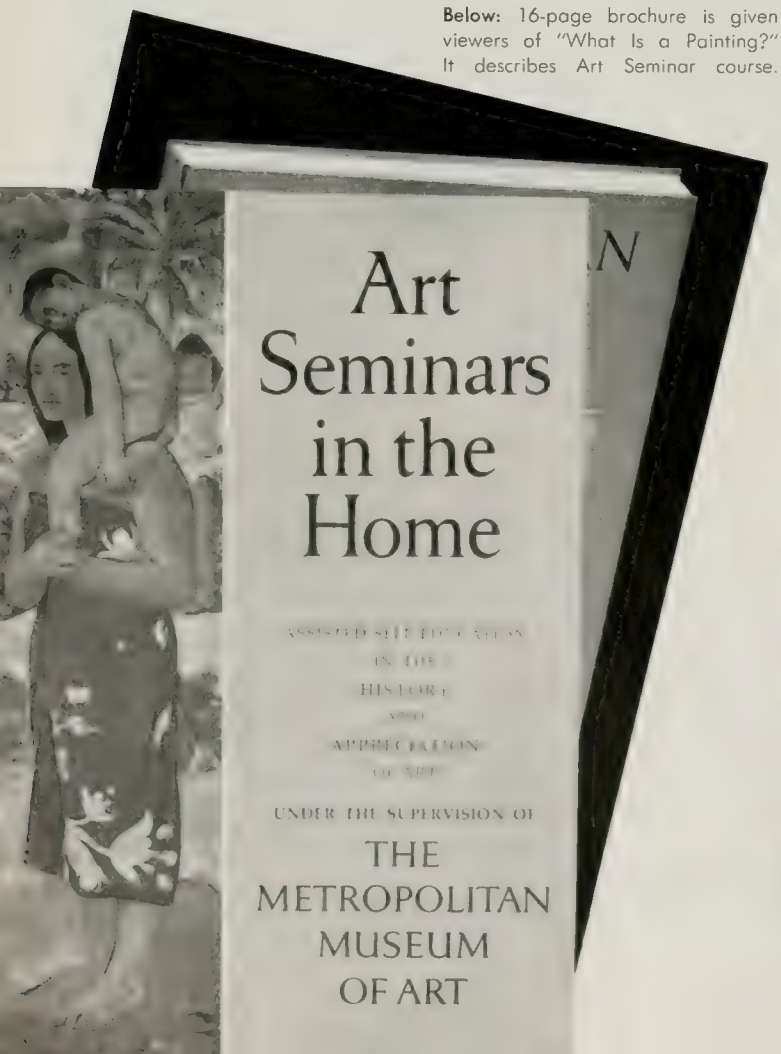
What Is A Painting?, just released this fall, is starting to pay for itself and earn a profit in its first few weeks of release.

Generates Orders for Course

After just a month of showings to adult audiences across the country, the film has been seen by 58 audiences, and has generated a direct response of five orders for the Club's course in art appreciation, *Art Seminars in the Home*, at over $90 per order.

With distribution (via Modern Talking Picture Service) just starting to pick up (191 advance bookings are now in on a second month's schedule for the 50 prints on hand), *What Is A Painting?* seems destined for a long and fruitful life.

John Canaday, critic and art editor of the New York Times, explains the principles of art appreciation in *What Is A Painting?* In color, and running 23 minutes, the film shows such famous works as DaVinci's "Mona Lisa," Renoir's "Madame Renoir", Degas' "Woman With Chrysanthemums" and Harnett's "The Old Violin".



. . . the famed "Mona Lisa"

The paintings are discussed in detail by Mr. Canaday in an appraisal to stimulate thought and appreciation of these classical works. Other subjects studied by Mr. Canaday for the benefit of the film's audience include those of Mondrian, Braque, Whistler and Ingres.

No Solicitation in the Film

While showings of *What Is A Painting?* have resulted in impressive direct sales records, the solicitation to subscribe to the Seminars is not contained in the film itself. The film's job is to g audience, motivate it, instru and inspire it to greater things the pitch—the highly successf rect mail letter solicitation which the Book-of-the-M Club is famous—goes har glove with the film. It fo along immediately after the l ing confirmation, comes again the film for all members of audience, and follows up pr ly after the showing.

This approach, dovetaili soft motivational message i film with a strong selling sto the written material, mak hard for the art-lover or cu enthusiast to resist.

Below: 16-page brochure is given viewers of "What Is a Painting?" It describes Art Seminar course.

On Business Tensions & Mental Heal

A Sensitive and Useful New Film for Executives' Viewi

SPONSOR: Connecticut Mutual Life Insurance Company

TITLE: *You Are Not Alone*, 29 min., b w, produced by Himan Brown.

☆ This is an unusual new film about a young executive who goes through an emotional disturbance brought on by a job setback. It tells of Ed Simpson, a young man on the way up, who is passed over for an important new job assignment. His self-confidence is shattered and he becomes depressed, moody and irritable. At home he is argumentative and feels that his wife does not really sympathize with him. They fight bitterly.

At work Ed Simpson is snappish with his co-workers and unable to function with any efficiency. Old stomach pains come back to plague him and he resorts to pills for relief.

Finally he sees his physician, an old family friend, who explains that his condition is not organic, but a symptom of long-standing tension.

The problem is really an emotional one," the doctor tells him. "Emotional problems cause s toms."

Ed and Margaret warm up to a ily argument in this film s

As the film ends, Simpson begun to realize that the purs success must be tempered self-acceptance of one's cap ties and limitations. For the time in years he and his seem to have an appreciatio their love and dependence on other.

Connecticut Mutual, sponso the film, is the oldest life in ance company in Connectic now in its 115th year. It monoline company offering vidual, ordinary life insur policies only. Why does su company make a film on m health?

"One obvious reason," ys Charles J. Zimmerman, Presi of Connecticut Mutual, "is at we have a direct interest, in he well-being of our policyhol rs. We are interested in their od health, both mental and phys al.

"Beyond this, we believe at business must assume its sha of responsibility for the proble of

A FILM ON MENTAL HEALTH FOR EXECUTIVE VIEWING:

(CONTINUED FROM PAGE 46)

society. Mental illness is one very serious problem—and one of particular interest to businessmen. It is estimated conservatively that mental illness among employees—both on and off the job—may cost business as much as $3 billion each year."

Connecticut Mutual has been working on a modest public service program since 1955 in the field of mental health. In addition to the new film, the company has published a series of cartoon booklets dealing in a light way with the problems of tension in every day living; and mental health forums of considerable reputation are held for business and industry leaders annually.

Film "Different" in Many Ways

You Are Not Alone is a different film in many respects. Direction and photography are by Barry K. Brown, who has placed his actors in real offices, real homes; lit them with very realistic, non-stagey light; and urged them to fight with, or love each other in a far more realistic mood than is usually seen in the business-sponsored film.

As the picture closes, for instance, Ed and Margaret are in bed, talking close together:

MARGARET: *Oh, darling . . . . . .*
ED: *You know you mean everything to me . . .*
I need you, and I love you . . .
MARGARET: *I love you too—you're my husband and I love you and I want you just the way you are . . .*

* * *

Here Are Some Other Lines . . .

☆ It is a different kind of business-sponsored film which will say this:

DOCTOR: *There's more to life than just a job. This is only a third of your life—you've got yourself, you've got your family. There's recreation—you owe this to yourself and your family . . . Ed, there's more to life than just a job, believe me. And in this merry-go-round of life, there's more to it than just getting the brass ring.*

In addition to the exceptional talents of director-photographer Barry Brown, other credits go to Ellis Gladwin for the script, Courtney Hafela for sound, and Ed Crowley and Sada Thompson acting in the principal parts.

You Are Not Alone is distributed with, or without a six-minute trailer, depending on the type of audience. The trailer features a statement of company aims by Mr. Zimmerman, and remarks by two psychiatric consultants to Connecticut Mutual.

Distributed by AF Films

You Are Not Alone is being distributed nationally by Association Films, Inc., 347 Madison Avenue, New York.

The Post-Operative Care of Rectal Cancer Patients

SPONSOR: American Cancer Society.

TITLE: *Nursing the Cancer Patients: Diagnosis, Cancer of the Rectum.* 18 min, b/w, produced by Dynamic Films, Inc.

☆ One of the most difficult post-operative situations to endure follows a colostomy. In addition to the ordinary problems of recovery which may follow any operation, a patient who has lost his colon and anal sphincter must be prepared for the difficult mental and physical task of living with a substitute.

It isn't "nice" — it is in fact completely odious at first — certainly to the patient, and p to those who must help h the road back to normal lif

But it can be borne, and fact of life for thousands of who manage to live with i cessfully. This film has been to encourage nurses to ad positive, helpful attitude in for these cancer patients. It tizes the difficult times patient and his family, and how a helpful nurse can do ders in preparing them to f to the problem bravely and with it more comfortably.

Nursing the Cancer Pat for professional use, only. prepared under the profe supervision of Dr. Ros Bouchard, Professor of N Education, New York Univ Producer for Dynamic Film Milton Perlman, director — Freedman, and writer — Perl.

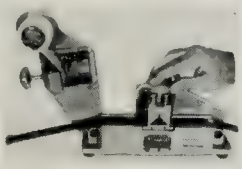
F&B PRODUCT PARADE

These are only a few of the hundreds of items in F & B's huge stock.

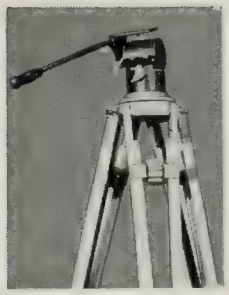


Another Fine Product From ACMADE

AUTOMATIC BUTT SPLICER

Cuts, Splices, Applies Magic Mylar Automatically!

The first practical, speedy and efficient automatic splicer and perforated adhesive tape (Magic Mylar) applicator on the market. Now, with no fuss, mess or waste, it is possible to splice, repair, butt-splice, or strengthen splices on all types of film — positive, negative, magnetic—even duPont Cronar or other bases.

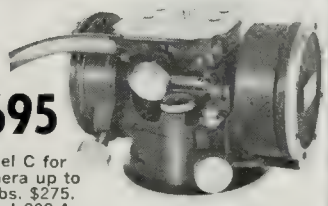


The cutting arm, shown in operating position, is used by pressing the chrome button for cutting both sides of the film simultaneously. The film, of course, has been registered on pins in the horizontal channel. The cutting blade is easily replaced when necessary.

The splicing tape is registered on precision pins and held in place until automatically applied to the film by swinging the arm over and pressing the chromed button. This action simultaneously cuts the adhesive and applied it—in perfect register to the film.

Model 35 for 35mm, Model 16 for 16mm—$295

NEW F & B MARK III FLUID DRIVE TRIPOD



The day of the friction head is fast coming to an end. More cameramen now use fluid drive heads **because** they meet the demand for smooth, continuous, easily-controlled action.

TV Bureau of Advertising Explains Medium's Ad Role

☆ The Television Bureau of Advertising is using a 33-minute color film as an industry sales presentation "spectacular". Called *The Progress of Discontent*, it analyzes the function of advertising and particularly television's role in it.

The film has an interesting origin. In its original form the material in the film was an elaborate, complicated presentation given at the annual TvB meeting. The intricate projection system required four rear-screen, automatic motion pictures projectors; two high-speed, rear-screen, film strip projectors; one carbon-arc motion picture front screen projector, plus two presidential lecterns and two executives from TvB.

TVB film frame shows how L-C-D symbolized all advertised wares.

Lane-Cole-Dietz Corporation, producers of business films, was given the job of transforming over 1,000 visuals from the original version into a single, half-hour film.

Advertising agencies, advertisers, and civic groups may obtain information about showing *The Progress of Discontent* from the Television Bureau of Advertising, 1 Rockefeller Plaza, New York 20, N.Y.

The Wide World of Sponsored Pictur

New Public Affairs' Picture to Aid Search for Diabetics

☆ *Diabetics Unknown,* a new 16mm sound film made for the express purpose of finding the million and a half undisclosed diabetics in the country, has been released for viewing by club and television audiences. It is 22 1/2 mnutes long and has an extra 6 1/2 minutes in a filmed discussion sequence that can be used to bring it to the 29 minute length preferred by educational TV stations.

Dr. Granville Larimore, chairman of the Committee that supervised the film, said it was only by reaching the public through mass audience media that the un-known diabetics can be found. "For every known diabetic, there is one who doesn't know it. The problem is teaching the people the early signs, getting them over their apprehensions, and persuading them to have a test."

First of a Sponsored Series

The new picture is the first in a series sponsored by the Public Affairs Committee, Inc. It shows the early symptoms, explains the disease and its treatment, and demonstrates that it is easier for a person to know he has diabetes and to take care of it than to live with it but not knowing he has it and suffering the dangerous complications resulting from its neglect.

Moderator for the film is Dr. Francis D. W. Lukens, past president of the American Diabetes Association, and the cast is documentary — people playing their own parts. Diabetics tell how they found they had the disease, what it is, and how they learned to live with it.

How to Obtain This Picture

The film and an accompanying pamphlet having the same title are available through the Affairs Committee, Inc., 28th St., New York, N.Y. F prints will be sent on requ print of the film costs $75.

Diabetics Unknown can rented from the Committ $7.50, or it may be obtain a free loan basis from mo health departments, and fr Upjohn Company, Kala Mich., and its regional offi

Rose for You" Pictures l-American Rose Winners

NSOR: All-America Rose Selec- ons

LE: *A Rose for You*, 14 min., lor, produced by Don Horter roductions. (Portland, O r e- n)

All-America Rose Selections, nsor of this film, is the nation- ssociation of major commer-

F. Lemon, President of All- rican Rose Selections, intro- d his group's new film at a t New York city preview . . .

arose growers, developers, and ducers of new rose varieties. s the film shows, AARS is cated to the improvement of y marketed roses based on performance and satisfaction give in the garden. Each year the group names the All-America Rose winners, the best of the new varieties determined after two years of growing trials and rigid scoring. Candidate plants submitted from hybridists the world over are grown at 24 testing stations pinpointed throughout the United States to reflect the widest variations of soils and climates.

Judging is carried out by a panel of recognized rose horticulturists applying a uniform system of scoring. Over the years amateur gardeners have used these awards as a yardstick for new purchases. Since 1940, when the first selections were made, only 59 roses have been singled out for AARS honors.

The 1962 AARS winners are a highlight of the film—they are *Christian Dior, Golden Slippers, John S. Armstrong* and *King's Ransom.*

A Rose for You is available free for group showings from Modern Talking Picture Service, 3 East 54th Street, New York.

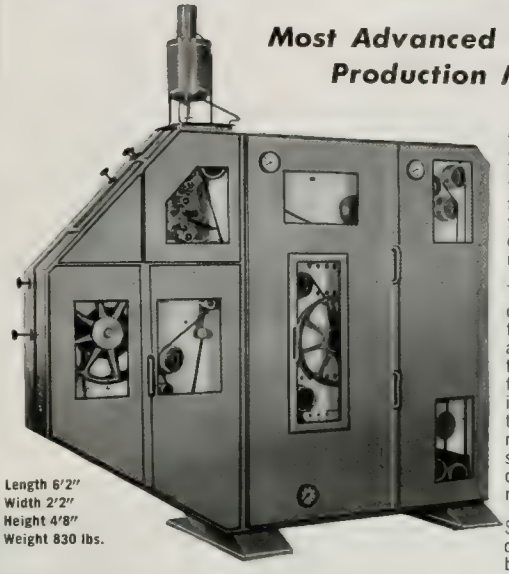
Communists' Youth Goals Are Depicted in College Film

☆ *Communist Accent on Youth* is the first of a series of Hollywood-produced films on the subject, "Crisis for Americans" sponsored by Pepperdine College of Los Angeles. The film depicts the menace of International Communism by a documentary of Red-incited riots in Europe, North and South America, Asia, and Hungary's bid for freedom. It builds up the case against Russian communism by the system's own brutal tactics.



In contrast are the sincere and sober words of concerned Americans—an actor, a college vice-president, a soldier, and a university professor.

Inquiries should be directed to the Pepperdine College News Service, 1121 West 79th street, Los Angeles 44, California.

Selection of Marches Ad to BG Film Music Library

☆ A special selection of ma has recently been recorde stereophonic sound by H-R ductions, Inc., as an additi their *BG-Library of Mood Bridge Music*. This supplemer been occasioned by an eve creasing demand for rhythmi fast moving music in the syn nization of film and TV pr tions.

The items are not mi marches featuring wind or instruments only, but have recorded with a concert orc consisting of more than 40 with the string section predon ing. Each march, which last proximately three minutes flects a different type of oc or mood in motion.

Listing of these selectio available from H-R Produc Inc., 17 E. 45th St., New 17, N.Y.

Film's Leading Role in Fund Campaign

"Right to Live" Helps Portland's United Fund Reach a Goal

NSOR: United Good Neighors (Portland, Ore.)

LE: *The Right to Live*, 15 in., color, produced by Northestern Incorporated, Portland, re.

The stark agony of an unwed ng mother bearing a child, the r terror of an alcoholic, the ing of a heart exposed to surare not calculated as enterment. To many in the audi- of more than 150,000 at 0 showings in two months, e screen portrayals approached excrutiating point; to a few went beyond and faintings reld. That such a film would be roversial was expected by the ducer, and they were right.

opping An Eight-Year Mark

he significant thing is that *The ht to Live* seems certain, for first time in eight years, to e the United Good Neighbors' r-raising campaign completely essful. This year's goal to aid humanitarian services covered UGN in Oregon's Multnomah, hington and Clackamas Coun- is $3,316,180.

Aid Robert M. Lindahl, presi- of the producing organization, e sponsor made the mistake of ng 'Make us a film,' and then g away and leaving us to our devices."

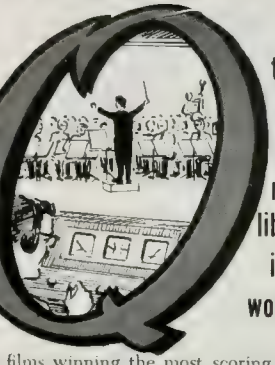
imed at the Point of Need

fter noting that most Comity Chest, United Fund and ar welfare agency films have ed toward inoffensiveness and dance of any controversy, the decision was made to attack problem not at the level of the agencies do nearly so as at the point of need, the on for existence of the welgroups involved.

brief recorded voice, with screen dark, introduces the

Newborn child is filmed moments after birth for "A Right to Live"

film which opens with startling abruptness on the birth scene and the title appearing some momens later. Although only eight of the 71 agencies actually are covered in the picture, they were selected with care, treated delicately but without minimizing the very real shock which existed in the actual cases on which the scenes were based, and the resulting film speaks effectively for the entire group.



Even Critics Help Publicity

After an initial showing to some 500 UGN officials, campaign workers, community leaders and members of the press, there were only three audible complaints: — two from bankers and one from a newspaper columnist who somehow got the picture confused with a Hollywood theater or TV epic — which it isn't, the OREGON JOURNAL's entertainment editor noted. The dissenting columnist did an effective job of interest-building, and other newspaper reports helped considerably in audience-creation. One measurement of the success of the project was the greatly-enlarged number of in-plant showings requested and scheduled. Despite the subject matter which normally would pre-

Three Executives Assume New Posts at General Film

☆ General Film Laboratories has announced new responsibilities for three members of its administrative staff:

Robert G. Goodwin, who has carried the title of vice-president, business affairs, now becomes executive vice-president. John Aikens, who has been controller, becomes administrative vice-president. Stanley Judell moves from assistant controller to controller.

Messrs. W. E. Gephart Jr., president, R. G. Goodwin, J. Aikens, and Neal Keehn, vice-president, sales, form the company's executive group.

* * *

Animation, Inc. Appoints Styles as Sales Manager

☆ Hal Styles has been named sales manager for Animation, Inc., producers of animated television commercials. In his new position, Styles will coordinate the sales activities of the New York, Chicago, Detroit, and Hollywood offices of the company.

Styles has a background of advertising agency, public relations, and publishing experience. He founded a weekly magazine devoted to construction activity; later he headed his own public relations firm. More recently he produced weekly TV programs.

Keitz & Herndon, Dallas, Adds Five to Creative Staff

☆ Keitz & Herndon, Inc., Dallas television and industrial film producer, has announced five additions to its creative staff.

The new K & H staffers are: Howard Irving Smith, technical animator, formerly with Paramount Cartoons and Transfilm, Inc., New York; illustrator Donald C. Medlin, previously associated with Douglas Aircraft Co., El Segundo, Cal.; Andrew Frederick Wages, Jr., illustrator, backgrounds, and special effects, formerly with Rahl Studios, New York; Monte Gene Young, animator, KCBD-TV and Byrd Advertising, Lubbock; and Mrs. Mary E. Hubbers of Dallas, supervisor of the inking and painting dept.

Dephoure Studios Announce Appointment of D.W. Rideout

☆ Joseph Dephoure, president of Boston's Dephoure Studios, Inc., has announced the appointment of

Douglas W. Rideout

Douglas W. Rideout, Malden, Mass., as account executive for the New England area and staff producer. He is a Boston U. graduate.

12 lb. Nomad Mark 2
ounced by Magnasync

eighing 12 lbs, a new trans- zed Magnasync recorder/re- cer records a 200 mil track plit-16 Nomad film. Desig- the Nomad Mark 2, the performs to SMPTE stan- . The unit runs forward, re- *and* rewind. The sound can onitored. It is powered by a ontained rechargable battery

the new transistorized 12- omad recorder/reproducer . . .

and a battery charger. Reels have a 400 ft. capacity.

Projector interlocks are available and standard Nomad editing accessories can be used. A stereo model is also available. Priced from $985. For additional data and sources use Request Form NP-2.

* * *

New Mark II 8mm Sound Projector Due from Vicom

☆ A self-contained, repeating 8mm sound projector is scheduled to be marketed early in 1962 by the Vicom division of Elgeet Opitcal Company. Designated as the Vicaudio Mark II, the unit's versatility and portability makes it convenient for use in trade shows and store displays—or wherever continuous film projection is required.

By use of a transistorized amplifier, the Mark II's weight was brought down to 18 lbs. The amplifier requires no warm-up; it has provisions for an external speaker or earphones.

The unit's 9" by 12" rear projection screen is suitable for use in fully lighted rooms. The self-rewind mechanism will take films up to 15 minutes in length and either 16 or 24 frame speeds. (The Mark IIa will take a 30-minute film.) The motor and moving parts are permanent lubrication type. The unit can be rented or purchased for $425. For additional data and sources, use Request Form NP-3.

* * *

Low-Set Head Featured on This New A/O Delineascope

☆ A low-position projector head on a new American Optical Delineascope gives the audience an unobstructed view of the projection screen. Called the "Low Silhouette Overhead Delineascope", its compact design makes it of particular value in rooms with low ceilings.

The operator faces the audience at all times. Two fold-out shelves on the machine provide him with work surfaces. Fast focusing is accomplished by a rack and pinion motion..

The machine uses a 1000-watt lamp which projects 2300 lumens to the screen. Transparencies are protected by the quiet, efficient, cooling system. A tension adjustment device keeps film taut over the platen. Priced at $345. For additional information and supply sources, use Request Form NP-4.

* * *

Companion Charging Unit Serves Dynamax Power Pack

☆ The Dynamax Power Pack, a sintered-plate, nickel cadmium storage battery for motion picture camera motors, now has a companion charging unit. The charger will re-energize a completely discharged Dynamax Power Pack overnight. Voltage and amperage meters afford complete control over the process.

The charger works on 115 volts AC with, 8, 12, 16 or 24 volt outputs—the choice depending on the type of battery. The charger and power pack are products of Gordon Enterprises. For additional information, Request Form NP-5.

* * *

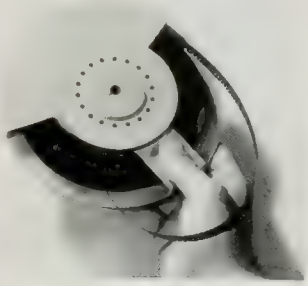
Radiant Perfects *Seamless* 70 x 70 Lenticular Screen

☆ An engineering breakthrough by Radiant Manufacturing Corp. has made it possible for the projection screen manufacturer to produce a 70" by 70" silver lenticular screen *without* seams. Prior to this the problem of embossing lenticular patterns on aluminum vinyl kept the maximum screen slide at 50" by 50".

The development makes it possible to project an image large enough for a big audience. The lenticulation surface of the screen gives maximum brightness on the optical axis and a minimum fall off at side viewing angles. For additional data and sources, Request Form NP-6.

* * *

Offer Hi-Impact Treatment for Continuous Run Films



☆ The problem of binding and jamming of continuous projection films has been solved by what is called "Hi-Impact Treatment FCP." As developed by Peerless Film Processing Corp., this new treatment eliminates friction by holding apart the convolutions of the film.

The film is toughened to withstand repeated exposure to heat during projection without buckling and is then treated to make it resistant to dirt, scratches, and brittleness. For additional data, use Request Form NP-7.

* * *

Going 8mm Sound? Consider Conti Pro-Reel Attachment

☆ No rewinding is necessary with the new Conti-Pro-Reel (Continuous Projection Reel) that provides continuous projection of 30 to 300 feet of 8mm film. The

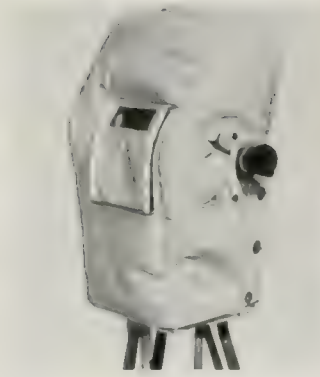
Above: you can show 8mm films continuously with the Conti-Pro-Reel.

Conti-Pro-Reel fits any 8mm projector that accommodates a 400 ft. reel. Film feeds from inside of reeled film and returns to the outside. A micro-switch automatically stops the projector should the film break—making it ideal for every type of unattended projection.

The reel, made of durable, high impact plastic, is a product of The Tee Cee Manufacturing Company. Price is $24.95. It is also available without micro-switch for $6.95. For additional information and sources, use Request Form NP-8.

* * *

Cases Provide Packaging for Your Color Tran Units



☆ A selection of nine different case sizes for ColorTran lighting equipment makes it possible for the user to have a complete lighting system for local work stored and transported in "packaged units."

The lightweight carrying cases are constructed of heavy duty fiber, reinforced with wood inside and plated hardware, outside. All cases have shock absorbent interiors of contour moulded foam material which cradles the equipment during transit.

Cases are supplied by the Natural Lighting Corp., manufacturers of ColorTran lighting eqiupment. Prices start at $21. For additional data and sources, Request Form NP-9.

(CONT'D ON THE NEXT PAGE)

For additional data on new audio-visual items mentioned here, use the convenient Request Form provided on page 59; mail to Business Screen

Barney on an Eastman Reflex

Sound and Heater Barneys for Eastman Reflex Camera

☆ Sound barneys and heater barneys are now available for the new Eastman reflex camera. The sound barney, it is said, will make the camera into a sound unit for location work. The barney will cover the 400 ft. load camera with a synchronous motor. The cover is white on the outside, green, inside.

The "barneys," manufactured by Birns & Sawyer Cine Equipment Company, are priced at $124.50 for the sound barney, and $184 for the heater barney. For additional data and sources, use Request Form, NP-10.

* * *

New Ampex Tape for Closed Circuit Video Recorders

☆ The Ampex Corporation now has a longitudinally-oriented TV recording tape developed specifically for Ampex's new VR-8000 closed-circuit Videotape recorder. Because the VR-8000 employs a single-head, helical-scan recording technique, it is desirable that the oxide particles on the 2-inch tape be magnetically aligned lengthwise along the tape.

On conventional 2-inch magnetic tape, used with the VR-1000 series of Videotape recorders, the oxide particles are aligned vertically to the direction of tape travel. Orientation of the oxide particles is accomplished by passing the tape through a magnetic field during manufacture. For data sheets and sources, Request Form NP-11.

* * *

Wilson's Magnascope Lens Enlarges Filmstrip Images

☆ To show large, clear pictures in a short throw with filmstrip projectors, the H. Wilson Corporation has introduced its Magnascope 1½-inch lenses for use with most popular makes of filmstrip projectors. With a throw of 68," for example, the width of the picture will be 40." The wide-angle lenses are priced from $40 and up. For additonal data on lenses and sources, Request Form NP-12.

* * *

Pictronics' Nova Lights in Demand Among Film Makers

☆ Pictronics Corporation's new Nova Twin Lights are finding considerable interest among Eastern film production people.

Very small and compact, each unit weighs but three pounds for the light and three pounds for the stand. With each Nova being the equivalent of nine kilowatts in studio lights, it can be seen that an armload of Novas would light up a good-sized mob scene.

Color quality is said to be excellent. Kelvin rating is 3450 degrees, with 3200 degrees also available on request.

Electrical rating is 10.5 amperes on 115 volts AC.

* * *

Salesfilms Inc. Develops New Hard Finish for Films

☆ Salesfilms, Inc., Denver, Colorado, offers a new film treatment designed for prints used in continuous projection. It's called the "Slix Treatment."

The process, which is applied only at the company's Denver plant, puts a hard finish on any print, new or old, regardless of previous treatment, to give longer life as well as an ultra-slick surface that is guaranteed not to bind in any continuous projector in proper running order. Each print is individually checked before ship

"Slix" prints will not sp streak; the treatment is inv and will last the life of the pr until the surface is destroye oil, grease or softened by "Slix" was also tested unde matic conditions ranging high humidity to dry climates

Not a liquid or wax, but a ment of film surface, the pr is covered by a written, m back guarantee. Write Sales Inc., 960 S. Birch St., D Colo., for informative chure.

* * *

Brumberger Announces Li of Wall and Ceiling Screer

☆ Brumberger, of Brooklyn York, has introduced a nev of wall and ceiling screens. ed the "University" series pecially for the audio-visual ket. They are said to be structed to take the punish of heavy daily usage in sc business organizations, etc.

Model "B" in the Brum University series is a flam mildew-proof vinyl with a of beaded or matte white face. A spring roller operat screen, and it also has a seal with slat tips that do into the case to protect s and tearing of the fabric the screen is not in use.

Other construction featu clude a fluted black hex case, die-cast and caps, all castings at all major wear

Brumberger "University" screens are available in al from 30 by 40 inches up to by twelve feet.

E BERLIN PICTURE:

NINUED FROM PAGE THIRTY-FIVE)

e nor enjoyed anything more since the
d the war. I must needs proceed with
dly to keep pace with my younger asso-
s And as we labor in the agony of our self-
in and the perfection of our tasks, there
t doubt among us that this is truly the
othe "New Zeal."

eme take a circumstance that concerns
ll— Berlin. Let's call it a living public
ies laboratory of how the Berlin story
diberated and then disseminated for all
rld to see.

A Media Turned to the Simple Truth

was August 13th when Krushchev's
ju vivisection began. I arrived in Berlin
Saturday night four hours before it all
nced. I was "privileged", if that be the
lord, to witness the barbarous brutality
way of life that clanged shut its Iron
a on its own people. It was a moving
t was a story well worth the telling.
h is how we told it.

began with priorities.

ils, radio, television and newsreels, press
periodicals, exhibits, pamphlets, libraries
ture programs — all turned their im-
ia collective efforts to the Berlin theme.
spread the news of what occurred. The
ewas a simple one. We simply told the
t.

said there was no "Berlin crisis," only
Khushchev crisis", stampeded and started
Moscow. We told how the danger to Free Berlin was a danger to free peoples everywhere. It was and is but one erupted blister on the face of Communism's vaulting world-wide ambition. We prefer negotiations to fighting, but we and our Allies have given a solemn commitment to Free Berlin. We intend, even at high cost, to keep Free Berlin free.

Three Documentaries for World Radio

The Voice of America, now on the air over 100 hours every day in 36 languages, concentrated on Berlin new coverage, commentaries and features. We did a one hour documentary, *Berlin, 1961*, a three-part series, *The Manufactured Crisis*, and another seven-part series, *The Berlin Story*. These were placed worldwide on local stations.

President Kennedy's July 25 Berlin speech and his September 25 UN address went round the world live in English, and was re-broadcast at peak listening times in 35 other languages. Total estimated audience for each broadcast — over 20 million.

How U. S. Utilized the Film Medium

In motion pictures, we filmed the President's two addresses, and today upwards of 900 prints of each of them are circulating in 95 countries.

A 20-minute documentary, *Journey Across Berlin*, was released world-wide in 30 languages. Bolivia's biggest newspaper called it "a sensational documentary." Rome's television showed it to 5,000,000 viewers. Rio reported 1,400 theaters across the country carrying it, called for 15 additional prints, said "the demand is fantastic." The 2,000 seat Buyuk theater in Ankara held over the film 10 days despite customary changes of feature films in half that time.

Another documentary, *Promise to History*, was seen by 70,000 in Turkey and caused a box office rush in Monrovia, Liberia. *Day of Denial* depicted the August 13 border closing in Berlin and went to 1,200 theaters in Brazil, another 1,000 in Argentina. We filmed the Vice President's visit and the arrival in Berlin of U.S. troops; it went to 80 theaters in Ceylon for an audience of 350 to 400,000 people.

Ask Those Who Know, a 20-minute documentary on worldwide refugees from Communism pegged to Berlin; *Hour of Challenge*, an adaption with illustrative visuals of the President's UN address-these too joined our impressive distribution list to show the demonical demeanor of Communism.

In television, we utilized these films and made other products for the TV medium itself. *Anatomy of Aggression* was a half-hour docu-

THE BERLIN PICTURE:

(CONTINUED FROM THE PRECEDING PAGE)

mentary linking Communist pressure in Berlin to Communist aggression worldwide. It went to 67 posts in 51 countries. *Focus: Berlin, Barbed Wire World* was another filmed TV effort that went to 54 posts in 38 countries.

News clips and features have repeatedly been placed in the popular monthly African film magazine, *Today* — a show hitting 30 countries and an estimated annual audience of 30 million. Berlin portions went into the Latin American weekly television program, *Panorama Panamericano*, going to 38 cities in 16 countries at peak viewing time to over 12 million people.

90 USIS Offices in Five World Areas

Our press and wire service has been filing heavy coverage — features, hard news, sidebars, commentaries, backgrounders — for placement in local newspapers and magazines by overseas posts — 90 key USIS offices in the five major world areas.

The President's Berlin speeches had such rapid translation and transmission that several dozen leading newspapers, from Montevideo to Manila, were able to carry the texts in full, and hundreds of others carried extensive extracts, summaries, and highlights.

Visuals and Cartoons Go to Periodicals

Our 65 overseas periodicals have regularly carried illustrated articles on Berlin; their aggregate circulation runs to nearly 3 million. We also boast the world's widest read cartoon continuity strip, and cartoon panels told the Berlin story for over 100 million readers of 1,246 newspapers in 56 countries.

We prepared an illustrated packet of 15 background articles on the postwar history of Berlin, the human aspects of refugees and Communist oppression. Posts reported very heavy local usage.

With posts around the world we have done much cross-reporting. Editorials, interviews, and eyewitness accounts by Asian, African, and Latin American visitors to Berlin are cross-reported from one continent to another in support of the U.S. position.

Picture Coverage for Overseas Windows

USIA Information Centers — 261 of them in 80 countries — have mounted special window displays, photos, charts, and texts on Berlin. They sponsored lectures, seminars, and forums on Berlin, and featured books and magazine articles on the subject in their libraries.

We pitched in with the Berlin city government to help bring more than 750 journalists from 80 countries to see for themselves the Ulbricht wall. A special Berlin photo pamphlet, in large size magazine format with dramatic photographs, is getting worldwide distribution in over 3 million copies in 11 languages.

As you can see, we have been indeed busy with a steady drumfire. One cannot revoke the past, but one can continue escalating the price the Soviets must pay for their action. We will continue the drumfire.

COMPCO

professional quality reels and ca are preferred by...

Only Compco offers "a new dimension quality" recognized and accepted by leade in the movie making industry. Compco's s periority is attributed to a new, maj advance in film reel construction—resul ing in truly *professional reels* that r truer, smoother, providing lifetime prote tion to valuable film. Compco reels a cans are finished in a scratch-resista baked-on enamel, and are available in 16 mm. sizes—400 ft. thru 2300 ft. For deta and prices write to:

THE EDITORIAL VIEWPOINT:

(CONTINUED FROM PAGE FOURTEEN)

ing Fiberglas for the sound slide-film *Selling on Purpose*, deemed an "excellent training film for salesmen."

And Honorable Mention was given to Smith & Loveless' motion picture on *Sewage Treatment*, produced by Calvin Productions, Inc. It was cited as doing "a good merchandising job on a hard product to merchandise, which could be shown as a public service to such groups as buyers on a tract, PTA's, and local government boards."

WORLD MARKETS IN THE JET AGE:

(CONTINUED FROM PAGE THIRTY-NINE)

swers and the kind of individualized assistance that is the basis for highly professionalized selling..

By a frank admission that air cargo is *not* the answer to all distribution problems . . . that each company and each shipment presents specialized problems requiring *selective* use of air cargo as part of overall distribution programs . . . the film captures the *personalized* quality that is an essential feature of air cargo transport.

STATEMENT REQUIRED BY THE ACT OF AUGUST 24, 1912, AS AMENDED BY THE ACTS OF MARCH 3, 1933, JULY 2, 1946, AND JUNE 11, 1960 (74 STAT. 208) SHOWING THE OWNERSHIP, MANAGEMENT AND CIRCULATION OF Business Screen Magazine, published eight times annually at Chicago, Illinois, for October 1, 1961.

1. The names and addresses of the publisher, editor, managing editor, and business managers are:
Publisher: O. H. Coelln, Jr., 7064 Sheridan Road, Chicago 26, Illinois.

2. The owner is: (If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding 1 percent or more of total amount of stock.) Business Screen Magazines, Inc., 7064 Sheridan Road, Chicago 26, Illinois; O. H. Coelln, Jr., 7064 Sheridan Road, Chicago 26, Illinois; Robert Seymour, Jr., Box 398 Southhampton, New York; Mr. and Mrs. Dale D. McCutcheon and Catherine Baker, Evanston, Illinois.

3. The known bondholders, mortgagees, and other security holders owning or holding 1 percent or more of total amount of bonds, mortgages, or other securities are: (None).

4. Paragraphs 2 and 3 include, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting; also the statements in the two paragraphs show the affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner.

5. The average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the 12 months preceding the date shown above was: 7,131.

MODERN
TALKING PICTURE SERVICE

Thanks to...

OUR CLIENTS

OUR PEOPLE

OUR PRODUCT

OUR INDUSTRY

1961—the greatest year in Wilding history—made possible by

. . . our clients, old friends and new, and their unanimous response to the fresh Wilding image

. . . our people, who helped create this new image with their creativity, their spirit, their desire to do only the best

. . . our production, with greater efficiency, new approaches and more modern methods, gave us greater competitive pricing opportunities to effect savings for our clients

. . . our industry, and the healthy competition within its ranks, which advanced more than ever before in growth and stature.

For 1962 we are looking ahead . . . to an even more successful year, with the greatest backlog of business we've ever had.

We wish continued success to all who made this possible and in particular to our competitors. . . for it is keen competition which encourages us all to improve our product and thereby insure the success of our industry.

When You Rent from F&B
EQUAL IMPORTANCE...EQUAL PERFECTION

This inexpensive splicer is an important item in our Rental Department. Your precious negatives will be spliced in it. If the splices don't hold, your pictures may be ruined.

When you rent a Griswold Splicer from F & B, it is **perfect** and your pictures will be too.

This is the most expensive and important camera in our Rental Department. Your entire production depends on the film which has run through this camera. The BNC Mitchell has thousands of precisely machined mechanical and optical parts. If any one of them does not function perfectly your picture may be ruined.

When you rent a BNC from F & B, it is **perfect** and your pictures will be too.

Perfection is a quality of all of F & B's Rental equipment...cameras, lenses, sound recorders, Moviolas, lighting equipment—or whatever.

We've told you F & B's rental equipment is MORE RELIABLE. It didn't just happen...we planned it that way. It takes a corps of top technicians, fine tools and precision machinery to properly maintain all this equipment; plus our determination to insure that F & B Rental Equipment is more reliable!

Here we show you Dom Notto, our Chief Engineer, and a portion of our Camera Room and staff. Our other Rental Departments include Sound Equipment, Lighting & Grip Equipment, Editing & Projection Equipment, as well as a fully equipped Machine Shop and Service and Repair Shops for all departments — staffed by 31 experts, technicians, and other personnel — all at your service.

THAILAND ON THE SCREEN

Thai Embassy Hosts Premiere of "Waters of Bangkok"

PREMIERING in Washington, D. C. this month was a beautiful new Eastman color documentary, destined for worldwide theatrical showings, titled *Waters of Bangkok*. Sponsored by Eastman Kodak and distributed by Paramount, the 10-minute short subject shows the stunning beauty of Thailand, is one of three films on the Southeast Asian countries being completed for Eastman by Wilding, Inc.

Preceding the film's premiere at Washington's Ontario Theater, His Excellency H. E. Visutr Arthayukti, Ambassador of Thailand to the United States, hosted a supper reception at the Mayflower Hotel. In the receiving line with His Excellency and Mme. Arthayukti were Mel London, Executive Producer for the Eastern Division of Wilding, Inc., who wrote, directed and produced the picture, and Mrs. London.

His Excellency, H. E. Visutr Arthayukti, Ambassador of Thailand to the United States, welcomes Mrs. Dean Rusk, wife of U. S. Secretary of State.

Others supping on "Noodles a la Thailand," and admiring the Thai evening wraps and exotic jewelry on diplomatic guests, were Mrs. Dean Rusk, wife of the U. S. Secretary of State, Justice William O. Douglas, General T. E. Curtis, Eastman Kodak Vice President in charge of Motion Pictures; General and Mrs. Erskine; Mrs. Alexis U. Johnson; H. William Hanmer, President of Wilding, Inc.; and several dozen Ambassadors and dignitaries from lands abroad and our own diplomatic corps.

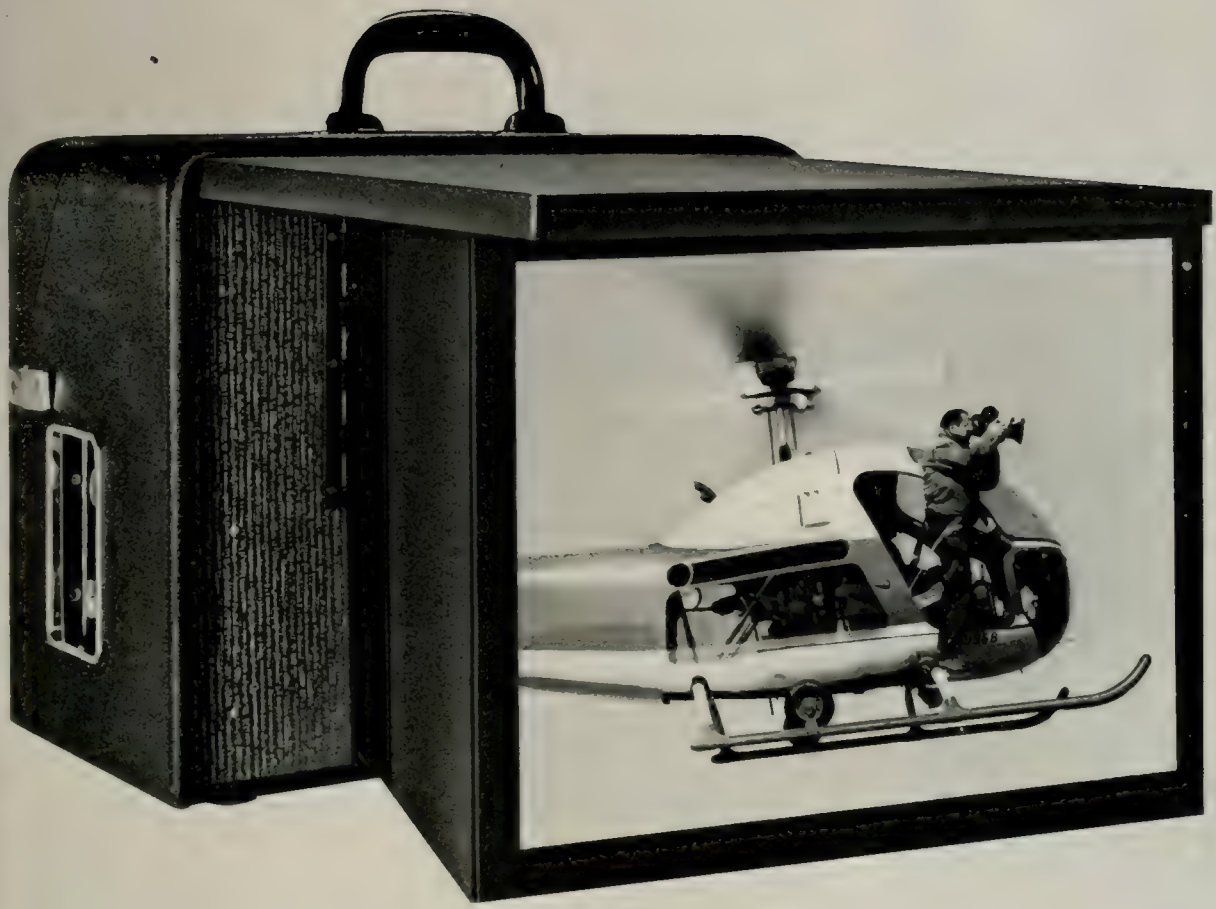
Waters of Bangkok is one of three films on the Southeast Asia area which Eastman and Wilding are completing from the rich, colorful footage brought home by London and cameraman Bernard Hirschenson. Our Washington correspondent, Mary Tanham, found it all "too brief" and "neither travelogue or travel film" but "more like an art film because of its sheer beauty."

Film's main theme is that water is the basis of all life in Thailand; from the Gods and Demon Kings to a shampoo in the river, water makes Thailand what it is today; with "klongs," or canals, Thailand would n the best rice in all of Asia or its fi Water *is* Thailand, the film seems to

Although London faced difficult pro problems with the language barrier, t coming monsoons and local crews and ment, he says, "the Thais do not und anger. They are wonderful. So . . . y kind of work things out."

In one instance, inside lighting for precedented Temple scene was provi two barefoot Buddhist monks, holdi 500-watt photo floods. This was the fi in history that filming of the religiou mony was permitted. The results are

Camera in Thailand is the title of th tional two-part film soon to be releas



General T. E. Curtis, Vice President, Kodak Company (left) presented a doz photos from "Waters of Bangkok" to Tha bassador, preceding the premiere.

Mrs. Mel London (at left), wife of produce tor of Thai picture, chats with Mme. Vi thayukti, wife of the Thai Ambassador.

Now you can double the value of your business films.

Double the *use* of your business films and you double their value. Simple? It's even simpler to use the Videotronic 8, MPO's new, automatic 8mm sound projector. You and your staff will really use *this* motion picture projector — and your clients! You'll find it easy-to-operate, easy-to-carry, easy-to-watch, easy-to-maintain, easy-to-own. It's the lowest priced repeater on the market. Or, if you wish, lease-use available on low-budget monthly rentals. (As low as $1.00 a day!) And rentals may be applied against purchase price.

MPO will also convert your 16mm or 35mm films to 8mm. The nation's largest producer of TV commercials and sponsored films for industry, MPO can produce effective low-cost films for your Videotronic 8. For further details, just drop a note to Judd Pollock, MPO, 15 East 53rd Street, New York 22, N.Y. Or call TR 3-7000 in New York. There's no obligation, of course.

Department of Commerce Surveys Industry on Sales Film Showings by U. S. A

THE U. S. DEPARTMENT OF COMMERCE, "actively and continuously engaged in programs to promote foreign markets for the products of American Industry," is considering a worldwide film program, utilizing 8mm magnetic sound prints of sales promotion films, to stimulate commercial sales abroad.

At year-end (December 27), letters and questionnaires were addressed to some 1,200 U. S. companies by Nathan D. Golden, Director, Scientific, Photographic and Business Equipment Division of the Department's Business and Defense Services Administration. The survey was directed to companies now sales promotion films which might be r sound-striped in appropriate languag sent abroad.

BUSINESS SCREEN reprints the ques form below for companies *not* on Com mailing list and, for their further guida quote from Mr. Golden's letter of t tal:

". . . The new approach would co showing trade promotion films by U. S mercial Attaches in our Embassies

3rd American TV Commercials Festival

Award Program Goes National as Five Regional Councils Join to Judge Entries; Deadline for Commercials is February 15th

With the Naming of five regional councils of advertising executives who will judge entries this year, the American TV Commercials Festival has attained national status in its third year. Details of the Third Festival have been released by Wallace A. Ross, Director.

Entry deadline for the national professional competition for makers and sponsors of film and videotaped television commercials is February 15th. Spots shown on TV in the U. S. and Canada from March 1, 1961 to March 1, 1962 are eligible for awards in 30 product categories and for citations for techniques where warranted.

1962 awards will be presented at a luncheon in the Grand Ballroom of the Waldorf-Astoria Hotel in New York on Friday, May 4th. Subsequent award presentations have been set for Chicago on May 11th, Toronto on May 16th, Dallas on June 7th, and Los Angeles on June 13th.

Judging an expected 1,000 or more entries (last year's total was 1,352) will be a large group of ad executives organized into five regional Councils — East, Midwest, Southwest, West Coast and Canada. Chairing the group for the third year is John P. Cunningham, Chairman of the Executive Committee of Cunningham & Walsh, Inc., and current Chairman of the Advertising Federation of America.

Some 22 advertising managers of major corporations are members of the national executive board, as well as several prominent agency heads, including Barton A. Cummings, President of Compton Advertising, Inc.; Walter Guild, President of Guild, Bascom & Bonfigle, Inc., and Bryan Houston, President of Fletcher, Richards, Calkins & Holden, Inc.

Other members of the Executive Board include Alvin E. Hollender, Executive Vice President, Grey Advertising, Inc.; Charles Feldman, Senior Vice President, Young & Rubicam, Inc.; and Margot Sherman, Vice President &

Festival Director Wallace Ross

Chairman of the Creative Board of McCann-Erickso

To establish the nationa of the project, the five R Councils will each meet a on the top 150 Finalists screened out of the total of entries. These Counci plan for constructive wor in connection with the Luncheons and the screen winning spots in Chicago, Toronto and Los Angeles

Last year's Festival r widespread press coverage enthusiastic reception fro advertising profession. TIM azine (May 13) describ award-winning commercials ing "remarkable" becaus had been made "with so more imagination, humor, graphic skill and musical than the programs they we signed to interrupt."

As of January 1st, 1962 86 advertising clubs, grou vertisers and their ag schools and overseas adv associations had booked las reel of Award Winners.

Entries Close Feb. 16th for National Safety Film Awards

☆ Sponsors and producers of motion pictures and slidefilms in all fields of safety education are alerted to the impending February 16 deadline for the 1962 awards program of the National Committee on Films for Safety. The 19th annual competition is for subjects produced or released during 1961.

Principal non-theatrical classifications are: occupational, home, traffic and transportation, and general (all other) films and slidefilms. There is no charge for entering the contest nor for the plaque and certificate awards presented to winning sponsors. The contest entries are judged by leaders of national organizations identified with national safety programs and by experts in the various category fields.

For entry forms and other information, contact William Englander, secretary, National Committee on Films for Safety, 5th floor, 425 N. Michigan Avenue, Chicago 11, Illinois. Both U. S. and Canadian subjects are eligible.

Kodak to Have Major Exhibit at the New York World's Fair

☆ The Eastman Kodak Company, a prominent participant at the 1939-40 New York World's Fair, has leased an area of 75,000 square feet for a major exhibit at the impending 1964-5 New York event. The Kodak exhibit will be located in the industrial area at the intersection of the Fair's main avenues.

J. Anthony Panuch, vice-president in charge of industrial exhibits for the New York World's Fair, welcomed the company's exhibit. "Kodak is ideal for our theme in presenting to the world a clear understanding of America at work and play," he said.

Kodak's "Cavalcade of Color" in 1939-40 was the first major color-slide presentation and proved to be a forerunner of color photography's current popularity. The Kodak fair exhibit featured a darkened "Hall of Color" with miniature Kodachrome slides projected and enlarged 50,000 times for projection on huge 17-by-21-foot screens. The pictures on the eleven screens in the hall were either related to one another in sequence or formed a giant color panorama. As they faded in and out, accompanying voices and music connected them to a moving story.

James E. McGhee, vice-president in charge of sales and advertising for Eastman Kodak, signed the 1964 exhibit contract, as the company joined AT&T, Chrysler, Coca-Cola, Ford, General Electric and IBM in the list of prominent industrial participants.

"Substantial Gains" Reported for Film, Equipment Exports

☆ Substantial gains in motion picture film and equipment exports from the U.S. were recorded in the first nine months of 1961, the U. S. Department of Commerce reports. Combined exports of still and motion picture products were more than $100 million, the department's Scientific, Photographic and Business Division noted. The total was substantially above the same period in 1960.

Foreign sales of 16mm sound projectors increased from $1,365,572 to $1,554,816; motion picture film and equipment exports were up 9.5% over the same period last year. Some 32 million feet more of 16mm rawstock film were exported in 1961.

TV Use of Factual Film a Highlight at EFLA Meeting

☆ New developments in television use of informational film were demonstrated at the 1961 Eastern Regional Meeting of the Educational Film Library Association on December 13 at the Carnegie International Center in New York.

Robert Costello, producer for Talent Associates-Paramount, Ltd., of the CBS-TV show *Armstrong Circle Theatre*, report on dramatized television documentaries and showed footage from his recent program on the Berlin Wall. Lou Hazam, producer of the NBC-TV special, *Vincent Van Gogh*, discussed this and other television projects involving filmed expositions of great works of art. James MacAndrew, representing the New York State Regents Educational TV project, reported on current developments in television for schools and colleges.

New film productions of interest were screened and discussed at an afternoon session at which EFLA President Frederic A. Krahn presided.

Himan Brown showed his new release, *You Are Not Alone*, a mental health film sponsored by

...more than the sum of its parts!

The arithmetic of leadership was there on the drawing board, long before the first precision parts were ever machined for the remarkable Arriflex 16. Leadership was in the making as Arriflex engineers conceived the many unique features that make it today's top-performing motion picture camera! ☐ For example, the **mirror-reflex shutter** viewing system eliminates finder problems. The fantastically precise **registration-pin** movement in a **precision film gate** achieves such framing accuracy that even 35mm blow-up release-prints sustain rock-steady screening quality. The **divergent turret** keeps a telephoto lens barrel out of the field of a wide-angle mounted alongside. ☐ There's much more to this amazingly compact 6½ lb. professional camera than the sum of its parts. Ask any Arriflex user!

WASHINGTON FILM COMMENTARY

by Mary Finch Tanham

Washington Correspondent for Business Screen

On May 15, 1862, Abe Lincoln signed a piece of paper and the U. S. Department of Agriculture was born. In this New Year, 1962, as the Department celebrates its Grand Centennial, the factual film industry will be proud to learn that one of the major events will be America's first film festival devoted entirely to the subject of agriculture. The announcement is doubly significant, since the year also marks the 50th anniversary of USDA's Motion Picture Service, the oldest film operation in the Federal government.

The agricultural film festival will be held in Washington in late November and will be open to all producers and sponsors of agricultural films on a wide variety of subjects: e.g. farming, crops, animals, engineering, food, gardening, home life, pests, resources, science, recreation and wildlife. Films may be entered in more than one category, with a maximum of *three subjects in any one category*.

Department's Films Ineligible

The USDA, which has cataloged some 300 films on everything from screwworms to *Smokey the Bear*, is out of the competition — ineligible to enter. So the field is wide open!

Agricultural films, which make an important contribution to national education and rural communication (and are often outstanding examples of film making by any standards) are sometimes overlooked by festival judges when screened in competition with films of a completely different character. In such cases, the farm film fails to win proper recognition for its substances — and it loses the wide audience it deserves.

To Observe "Americas' Day"

There are hundreds of these worthy agricultural films in circulation; they have been produced by industry, schools, business and civic organizations. The USDA hopes to garner them all in this unprecedented festival!

The "Agricultural Film Festival" will additionally include an invitational "Americas' Day," to pay tribute to the fine pictures out of Canada and the countries of Latin America.

Submitted prints must be 16mm, either color or black & white and there is no restriction as to length. *But only films released since January, 1960 will be accepted.* There are no entry fees.

Juries for agriculture's festival will be carefully-selected and especially qualified to judge the relevant subject matter. Winners

Growth Through Agricultural Progress

will receive a Centennial Certificate of Merit and a letter of commendation from the Secretary of Agriculture.

Winning Films to Go on Tour

As there will no doubt be widespread demand for further showings of winning entries (on television and before agricultural, civic and other groups), the Department will arrange for additional screenings across the country and will keep and distribute winning films until November, 1963, at which time prints will be returned. Those which have been eliminated will be promptly returned after pre-screening sessions.

As a result of Festival recognition and publication, the Department anticipates that winning films will be seen by large new audiences, who will welcome this opportunity to enjoy and profit from the absorbing world of agricultural films.

Watch your mail for invitations and entry blanks for this major 1962 event which you will be reading about in ensuing issues of Business Screen!

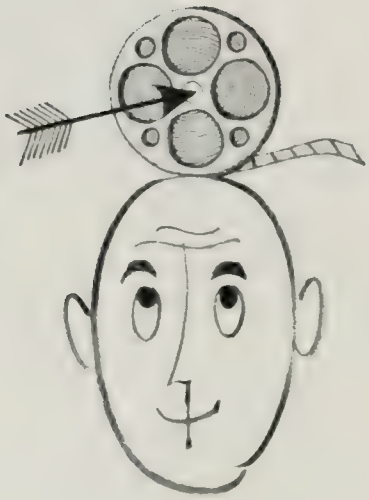
"New Face of Capitol Hill" —a Tribute to Late 'Mr. Sam"

. . . Few people realize that "Mr. Sam" Rayburn did more than anyone else to perpetuate the face of the nation's capitol building for posterity. Fewer realize that there is a stirring story behind the way that, column-by-column, piece-by-piece, carving-by-carving — the old, pitted structure was replaced by gleaming new marble from Georgia.

New Face on Capitol Hill (recently produced by Frank Willard Productions for the Georgia Marble Company) is, in its way, a tribute to "Mr. Sam" as well as a fascinating glimpse of men and machines working the swamps and hills of Georgia.



How do you gouge out pure marble which has lain for hun-

n embassy officials are filmed in Washington to commemorate of their country's flag of independence (see story above).

When your every shot is vital...

...you can count on us.

Their after hours talk is all about you

Solving problems related to all types of film processing is their business. Out of their discussions also come ideas for saving you time—and money. Forty-five years of experience mean superior quality and service—plus dependability.

Technicolor®
CORPORATION

SERVING THE PROFESSIONAL AND HOME MOVIE INDUSTRY OF THE WORLD · HOLLYWOOD · NEW YORK · LONDON · PARIS · ROME

Technicolor is a registered trademark.

The Dependable One

There's something very comforting about the way a Kalart/Victor projector runs. Whisper quiet. Almost without effort. And above all, dependably. It's *always* ready to put on your program.

One reason is the lubrication system designed exclusively for Kalart/Victor projectors. Oil is metered from a large reservoir on "demand feeding" by means of a wick. Parts are given only the amount of oil they actually require. There can be no leakage because the oil travels *upward* through the wick by capillary action. One filling of this oil reservoir keeps the projector running smoothly for some 1,200 hours, or a full year of heavy use. What efficiency!

Of course, there are a score of other features that contribute to Kalart/Victor's reputation as the *dependable* 16mm sound projector. Your authorized Victor Audio-Visual Dealer will be more than pleased to point them out to you.

Free — "How Industry Profits from Films." Booklet is packed with information on use of audio-visuals in every phase of business, from training to sales. Send now for your copy. Address your request to Victor Animatograph Corp., Dept. 6.

Appealing Film on Value of Phonovisual Reading Method

. . . As we all know, there's nothing more soul-satisfying than beautifully-filmed children in gay, happy color. And that is precisely what Nick Read of Potomac Films, Inc. has accomplished with a group of bright, apple-cheeked youngsters in Maryland's Primary Day School.

But why these particular children? And why a 29-minute school film about them?

Showing to Parents, Educators

It's because they are fortunate beneficiaries of the new, highly-successful "Phonovisual" method of reading, which warrants this definitive film aimed at parents, teachers and school officials. Primary Day, which accommodates kindergarten as well as first and second grade youngsters, is a modern country school founded by two D. C. teachers — the Misses Schoolfield and Timberlake.

Their demonstration school revolves around the theory that reading and spelling failures, roots of evil in education, are completely unnecessary. In short, they have come up with a rather revolutionary, organized system of phonetics which, as one sees in this film, is a big ball of fun. The children gain confidence with their consonants in kindergarten, then meet head-on with vowels in the first grade. From the very beginning, their zest and absorption in the big game of learning is something to behold!

The Children Play Themselves

The film has been produced in a framework of wonderful primary colors. Without a trace of "artiness," the children are presented working like little demons, laughing like little trout. They are to-

live actors and some fine scenes shot in and near the nation's capital.

The leading character, Edward John O'Dowd, is an inventor on the trail of a solution to the irritating problem of smog. Dowd has the seed of an idea — germinated from two previously unrelated thoughts. His own interest in his invention (and that of his colleagues *and* the audience) grows until he is finally sent to Washington for a patent search.

How An Idea Is Protected

The Bureau of Patents which, in 1961, granted the nation's three millionth patent, is a tremendous place where a fraction of an idea might conceivably get lost. But this is not so — and Edward John O'Dowd, with the help of a patent lawyer, finds what he is looking for. Meanwhile, those who watch his little drama unfold learn what happens to an "inventively different" idea in the long stretch between its conception and its birth.

Oeveste Granducci wrote the script for this Washington Video Productions' picture. George F. Johnston directed, with Pete Gabarini and Vincent Gerardo at the cameras. Joe Riviere narrated when lip sync was not employed for actors Bob Rickman, Robert Prosky and Harry Bergman.

Benefits of Our System

Fuel to the Fire contains many obscure but extremely worthwhile facts about the Bureau of Patents; it subtly points out that we Americans do enjoy a good life, made possible through the good ideas and confidence given to those who bring them into existence. Corporate research and development people will especially welcome the picture as will all concerned with the legal and inventive aspects of the subject.

USDA's Film Helps Explain Strontium-Free Milk Process

. . . Although the Atomic Energy Commission and the Weather Bureau have estimated that dread fallout in the atmosphere this spring will be less than previously anticipated, there is still cause for concern over the predicted levels of Strontium 90 in food and drink. The entire dairy industry — and every parent — is particularly worried about milk.

To those concerned, the development of a new device by the Agricultural Research Service of the U.S. Department of Agriculture will bring welcome relief. The (CONCLUDED ON PAGE 51)

KALART VICTOR

MOVIEMATIC AND DUOLITE MODELS

This Salesman Never Gets Tired

He also has a flawless delivery, a photographic memory for sales features, and a continually cheerful disposition.

In short, he's a 16mm sound film that goes anywhere to tell your story perfectly through the use of a Moviematic or Duolite projector.

Moviematic and Duolite models by Kalart/Victor are designed to show your films under the exact conditions you want. For example, the built-in screen permits the use of film in a person-to-person sales situation. And the repeater magazine—a Moviematic feature—eliminates rewinding and rethreading so your show can start at the flip of a switch.

Projectors are available on a purchase, lease, or lease-to-purchase basis. Almost any arrangement can be made whether you need a single projector or a fleet. For complete information, including the name of your nearest dealer, write to Victor Animatograph Corp., Dept. 6

Graflex Visualizes the New "Galaxy"

TAKING A LEAF from its own book, Graflex, Inc., subsidiary of General Precision Equipment Corporation, Rochester, New York, has released a 15-minute color motion picture on its new 16mm sound motion picture projector, titled, *The Galaxy 16mm Projector.*

Expertly produced by Holland-Wegman Productions of Buffalo, the film is something more than a projector demonstration. The scene is set by contrasting the tremendous strides made in aids available for classroom use.

First scenes for *Galaxy* were lensed on location in a 19th century school building in Buffalo; the focus quickly shifts to a modern classroom in which a school system's audio-visual director conducts a training session to explain the operation of newly-acquired Galaxy projectors. The film does present a complete description of the operational and design features of the Galaxy, along with a demonstration of its performance capabilities.

Special attention is paid in the film to innovations in 16mm sound projection incorporated in this equipment. The use of a recently-developed dichroic reflector lamp to reduce heat at the filmgate and produce at 250 watts the equivalent brightness of 750 or 1200 watt lamps is an exclusive feature of the Galaxy. Also emphasized in the film is the sound system, which uses a photo-transistor for audio pickup to eliminate microphony and to reduce internal amplifier noises common in conventional photo cell pickups.

During this demonstration, the camera cuts to scenes chosen to illustrate the sharpness and steadiness of the projected image; the fidelity and range of Galaxy sound.

Instructional value is combined with selling in the Galaxy film proc

Holland-Wegman technicians made a visual explanation of reverse operation by running their cameras in reverse.

The result is a sequence showing the normal action of the scene until the Galaxy reverse control is activated at which time the proj drive changes direction an scene is shown in reverse.

The film will be distribu district sales managers and de ers for use in presenting th flex Galaxy to prospects.

Film Saga of "The Good Ship Hope"

A MOST APPEALING new film, *The Good Ship Hope*, was unveiled last month at a preview showing in the Time-Life Building, New York. The film, produced by Chet Hagen of NBC-TV for Project Hope, was telecast on the NBC network on November 28. It is concerned with the inspiring work of the People-to-People Health Foundation, and the hospital ship, Hope, which has spent the past year on its first educational mission of mercy in Southeast Asia.

Hosts at the preview showing were C. D. Jackson, publisher of LIFE Magazine; Ralph Bellamy, who plays a leading part in the film; and Joan Fontaine, who has taken an active working role in Project Hope.

The film, sensitively ac graphed by Dexter Alley an rated by Mr. Bellamy, carr to the village cities of Sout Nam to see field teams of co and nurses going about the i portant work. One bright, 14-ye old boy, Ta Van Tu, appear fr time to time throughout th providing appealing continu

"His eyes didn't work toge Bellamy explained. He wa al born with two thumbs on l hand. In the film, we watc h come on the ship, receive s gi treatment, and go on to co pl recovery with "straight eye

As he waves good-bye t "M Ralph" and the Good Ship Hope crew he becomes a symbol t aim and meaning of Ho Hope.

Louis de Rochemont Associates' Lothar Wolff and Stuart Rosenberg turned out this drama of the Church v.s. the godlessness of Communism for the Lutheran Film Associates.

DETROIT HONORS A FILM PIONEER

In a recent ceremony at Detroit's City-County Building, Mayor Louis C. Miriani honored The Jam Handy Organization and its founder, Jamison Handy, on 50th Anniversary.

The Lifetime of devoted and inventive service which he has given to the art and science of idea communication began for Jamison Handy in 1911 when a young newspaper editor chose to begin life anew and turned to the then unmarked and scarcely-known field of "visual education." In the closing weeks of 1961, the Mayor and City of Detroit, where The Jam Handy Organization makes its headquarters, honored this film pioneer and the 500 members of his company for "outstanding contributions to the communications industry" and declared a city-wide "Jam Handy Day" while presenting Mr. Handy with a symbolic gold "Key to the City" on this 50th Anniversary occasion.

The man who set out to do something about "improving things at retail" and "making them understand" played a tremendous role in helping make America's mass production system work. Jam Handy films assisted in bringing to the eyes of service people, salesmen *and customers* the first self-starters in cars, electric pumps on the farms, automatic cash registers, adding machines and coin-box telephones.

Jam Handy begins a second half-century with a world view of the techniques and the tools that have proven so useful in the U. S. Recent films have been translated in dozens of tongues. A request from the ministry of education in Thailand sent Jam Handy teaching filmstrips into the bamboo schoolrooms of the Asiatic hinterland.

The man who made something more of the film medium than fiction and fantasy looks beyond to new creative and technical innovations which can bring understanding to the millions throughout a world that has need for "light" as well as substance. A Jam Handy "wraparound" theater that was visited by enthusiastic throngs at last year's International Agricultural Fair in India was symbolic of his faith in the advantages of showing the world "by talking to the eyes." —OHC

"Venture Into Public Service That Comes Off Splendidly . . ."

Press Salutes "The Michigan Story"

Michigan Consolidated Gas Company Sponsors 28-Minute Picture to Show How State Has Met Economic Crises, Emerged Stronger Through the Years

ONE OF THE MOST UNUSUAL industrially produced films ever made . . . it makes no effort to sell a product and only mentions the company's name once in the introduction . . . is getting wide circulation and acclaim in Michigan.

Titled *The Michigan Story*, it was made for the Michigan Consolidated Gas Company by The Jam Handy Organization, in collaboration with the utility's photographic and public information staff.

Theme of the film is Michigan's ability to survive one economic setback after another and always emerge more prosperous than before. In a series of flash-backs, it traces 300 years of the state's economic history and growth from the first fur traders to the present.

Filming a pioneer sequence for "The Michigan Story" as flash-back retells history.

Newspaper Editorials Praise Sponsor

The Michigan Story is such a departure from the normal industrial film that newspapers across the state have reviewed it and were lavish with their editorial praise. Said the DETROIT FREE PRESS on its editorial page under the headline "Michigan Plays the Lead":

"For any whose faith in Michigan needs restoring we recommend a 28-minute color film called *The Michigan Story*. It was produced during the past summer by the Michigan Consolidated Gas Company . . . It can do Michigan a tremendous good wherever it appears on a screen and Michigan Consolidated is entitled to the gratitude of everyone who has the state's interest at heart. It is a venture into public service that comes off splendidly."

The ANN ARBOR NEWS editorialized with "Helping to Sell Michigan" and stated: "Michigan Consolidated Gas Company is doing its part by preparing and presenting a new film, *The Michigan Story*, which will be shown to audiences in this and other states."

Under the headline "Selling Michigan," on Oct. 20, the TRAVERSE CITY RECORD-EAGLE stated: . . . "This is a picture which all Michigan clubs and other organizations should secure, for after one sees it, any faltering faith in Michigan is promptly restored. . . . It is to be hoped that the Michigan Consolidated Gas Company gets a wide showing of this film outside Michigan for it will do much to combat the unpleasant publicity the state has received in the past few years."

A lead editorial in the MUSKEGON CHRONICLE entitled "The Michigan Story" commented: "*The Michigan Story*, produced by Michigan Consolidated Gas Company, is a worthy addition to the information features that are available about this state . . .

Portrays State's "Vitality, Variety"

"Here in the first color film of its kind is an up-to-date portrayal of the vitality and variety, in resources and economic growth, to be found in Michigan. Those who see *The Michigan Story* will come away with a message."

Ralph T. McElvenny, president of Michigan Consolidated, explained that his company "wanted to make a film which tells the truth about Michigan . . . how well we are coming out of the post-war adjustment period."

He pointed out that as the state's oldest utility, Michigan Consolidated feels an obligation to help allay the fears for Michigan's future.

"If history is our best teacher, then we should look back and see how our state and its economy have weathered dozens of setbacks. There have always been enough dedicated people who, using their own ingenuity and Michigan's many and varied resources, have kept our state among the most productive

(CONCLUDED ON PAGE FIFTY-FIVE)

Preview Notes on Glass Institute's Colorful Film

SOR: Glass Container Manufacturers Institute.

TLE: *Sealed in Glass*, 27 min., color, produced by Cullen Associates.

Man's age-old quest for an ideal container is the theme of this beautiful new film. And the container to be found, of course, is in glass—glass as thin and fragile as a soap bubble, or strong enough to stop bullets and build skyscrapers.

Among the many original pieces exquisitely displayed in the film are examples of Egyptian glass objects more than 3,000 years old. Other glass objects from later times include free-form containers, American historical flasks, handmade original Mason jars, and a variety of early jars and bottles of almost infinite size, shape and color.

In addition to showing representative objects resulting from man's continued efforts to obtain better containment, the processes by which these objects were made are also depicted. By

Blowing through a hollow metal rod, man discovered blowpipe method of making glass . . .

concentrating on close-up photography, the sand-core, blowpipe and mold methods for making glass containers are shown. Each method is thoroughly enacted so that we can understand the great technique required of the early glassmaker.

From pioneer work in making glass containers, the camera dramatically focuses on today's modern methods of mass production.

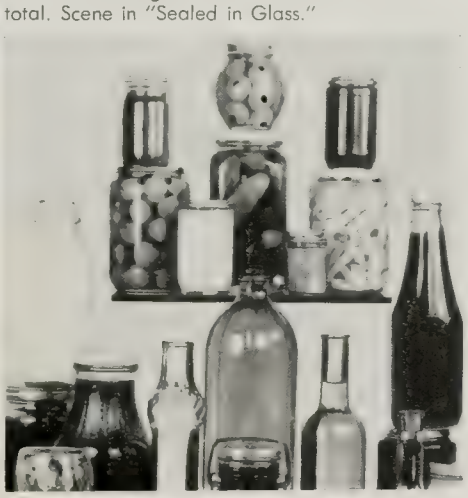
Beginning with the invention by Michael Owens of the first fully-automatic bottle-making machine in 1903 (the original footage of which is included in the film) the art of making glass containers was changed into a great industry. In the modern glass container plant, 22 billion new containers are produced annually, and the care required of the individual glassmaker years ago is still evident in today's gigantic plants.

Sealed in Glass graphically makes its point that in the search for ideal containment, man

(CONCLUDED ON BACK PAGE FIFTY-SIX)

Film As a Trade Association Medium

Equal Member Consideration, Genuine Public Appeal Are Among Key Factors



by John J. Mullin*

Because of the Very Nature of a trade association, the problems involved in producing a motion picture for one are immediately increased. Trade associations—at least the major ones—usually represent all or most of the companies involved in a single or allied industry. Each "member company" has an active interest in the projects its association undertakes because such projects reflect on him as a member of that industry. Also, through the payment of dues, member firms provide the funds to carry out the activities of the association.

When an association undertakes a project such as a film or an advertising campaign, it is with the view toward educating a mass audience to an entire industry rather than the products of a particular company. However, every advertising or public information program must be inclusive enough to represent the individual elements comprising the whole association. In a very real sense the smallest member of an association can expect the same consideration as the larger members.

The Glass Container Manufacturers Institute (GCMI) has a combined membership of thirty-five glass container manufacturers representing over ninety percent of the domestic productive capacity; six closure manufacturers; and twenty-one supply and allied manufacturers. Many of these companies maintain their own advertising and publicity departments that are fully capable of, and qualified to, evaluate the creative efforts of their association.

Largest end-use category for glass containers is food, accounting for over 40% of the domestic total. Scene in "Sealed in Glass."

Objectives of the Institute's Picture

When GCMI—one of the largest associations—decided to make a new film there were definite objectives in mind: to make a film encompassing the products of an entire industry while not by-passing products of individual companies; to make a film that would measure up to the high standards of promotion done by its members; and to make a film to sell glass containers but not to make it so commercial that important markets such as schools, clubs and TV would be lost.

In one sense association advertising is less likely to fall victim of over-commercialism since such advertising must be "generic." The need to have trade marks showing or the name of the product in constant view is nonexistent.

"Theory of Containment" Best Concept

After considering several approaches to the film, the one submitted by Cullen Associates based on the "theory of containment" was judged the most suitable. The simple concept was based on the idea that man has always needed to contain the products he used, and that through centuries of experimentation he found glass to be an ideal container.

The historical aspect of the concept seemed a natural one since glass is known to be man's oldest packaging material. Glass containers for wines and perfumes were made by the Egyptians more than 3500 years ago. It also reduced the commerciality of a straight glass container packaging film.

With the idea for the picture agreed upon,

* Mr. Mullin served as Assistant Director of Public Information at the Institute during this production. He is now an executive in a N.Y. public relations firm.

FILM AND THE TRADE ASSOCIATION:

a treatment was prepared by the Cullen office expanding the theory of containment in relation to glass. To introduce the idea, an element of nature in its free state—uncontained and without fixed boundaries—was chosen. Water became the agent and its containment in a clean, transparent, sturdy, reusable glass container served to introduce *Sealed In Glass*, GCMI's 27-minute Eastman color film.

Cullen Associates was selected to make the picture because this producer was able to come up with the most satisfying concept for the film. Equally important, Cullen was able to offer talent of wide diversification from many sources.

The Film Required Several Basic Techniques

GCMI felt this was important because as the script developed it became evident that more than one film technique would be required. Part of the film required animation and close-up studio work photographing glass containers which is painstaking work; other scenes had to be shot in a giant glass container plant where great areas had to be lighted and shot from many angles and distances. In all, three cameramen—each known for a particular style—were assigned to the film.

From the theory of containment to the practice of making glass containers the way the Egyptians did thousands of years ago presented a major problem. If the theory of containment was to be fully developed we felt that an accurate re-creation of the manufacturing processes for making glass containers through the centuries was called for.

From earliest times to the present, four methods for making glass containers have been used: the sandcore, the blowpipe, simple molds, and the fully automatic bottle-making machines. So far as we knew no one still practiced the sand-core method which was laborious. However, the two retired Steuben glass blowers who performed the blowpipe and mold methods on the screen were able—after some initial difficulty—to imitate this ancient method.

Simple Costumes Avoid Dating and Expense

Each method is thoroughly enacted on the screen and photographed in tight close-ups. The glass blowers were dressed in plain garments in an attempt to give them a certain timelessness. Although specific dates are referred to in the film, we thought it would be a mistake to attempt to costume the men in authentic clothing. Unless a Hollywood-style budget is available for both sets and costumes, historical vignettes on a smaller scale often emerge more hysterical than historical.

With the help and cooperation of institutions such as The Brooklyn Museum, Metropolitan Museum of Art, and The Corning Museum of Glass, historical accuracy was achieved by the loan of props from significant dates in glass-making history.

Although the historical re-creation adds a fascinating touch to the film, GCMI member companies do not make today's glass containers by ancient methods, nor do they sell reproductions of Egyptian vases. Today's glass (PLEASE TURN TO CLOSING PAGE FIFTY-SIX)

A SIGNIFICANT TECHNICOLOR FILM ON AMERICAN INDUSTRY'S RO
IN HELPING THIS LAND TO ACHIEVE A BRIGHTER ECONOMIC FUTU

SPONSOR: The Ohio Oil Company.

TITLE: *Libya Ahead,* 28 min., Technicolor produced by Wilding, Inc.

MIDWAY BETWEEN GIBRALTAR AND SUEZ on Africa's northern shore, Libya stands at the crossroads of ancient and modern worlds. A large nation, nearly double the size of England, France and Italy combined, Libya was the site of prosperous civilizations established by Greece and Rome. The ruins of Sabratha, Cyrene and Appolonia still
with classic beauty of the ancient greatne
the land.

Today, Libya draws her principal suste
from the soil. Citrus fruits are an imp
crop; dates a staple food. Water, even nea
coastline, is precious. From fields inten
tilled and irrigated, the people carry their
duce to market in nearby towns. Cattle, s
goats, donkeys and camels are nego
wealth and a source of food, clothing,
and transportation. On the broad level

Camel caravans still move across the desert, as they have for untold centuries, hauling supplie
to isolated villages far away in the vastness of the Libyan interior. (Scene in film "Libya Ah

yrenaica, agriculture on a large scale, in-singly mechanized, yields a valuable har- of wheat and other grains.

Two Worlds Meet in Tripoli's Harbor

n Libya fell the heaviest destruction of the th African campaigns waged by Rommel Montgomery. Benghazi, still showing the s of a thousand air raids, is the capital of Cyrenaica and the alternate meeting of the Libyan parliament. Tripoli, princi-city of Tripolitania, is Libya's western tal and its shining, luminous structures re- the brilliance of the Mediterranean sun. dock facilities of Tripoli's harbor are the ting place of two worlds. For Libya has rged as one of the new oil-producing na- s and Tripoli's harbor has become a main arkation point for petroleum equipment material, an important center on a *new* e route.

ith these opening scenes, the main theme thought-provoking new film illuminates the being played by Western capital in devel- g the resources of lands abroad. The cost- nd long-fruitless search for oil beneath a's desert sands was undertaken as the t venture of the Oasis Oil Company of ya, Inc., in which the Ohio Oil Company, nsor of a new 28-minute Technicolor mo- picture titled *Libya Ahead*, was one of associates. Wilding, Inc. was the producer. ding staffer John Davenport wrote the t and Charles Beeland served as director- eraman.

Discovery Holds Rich Promise for Libya

ibya Ahead was well along in production re oil in proven quantities was uncovered. discovery holds rich promise for the na- 's future for now this enormous expenditure apital, manpower and technical skill by o Oil and its associates brings new funds the expansion of education, medical fa- ies, agricultural development. Thus, the holds real meaning for the film's two-fold ience: to show American viewers the coun- in which they have invested and, via an bic version, to show the people of Libya other lands to the East, *their own story*, the economic significance of Western aid evelopment of their resources.

M. S. Hauser, manager of The Ohio Oil mpany's Public Relations Division, notes: Primarily we produced the film to give Am- an audiences a better understanding of ya . . . what the country is like, what its ple are like and to point up the progress y are making in establishing their nation.

Will Give Libyans View of Their Land

For Libyan audiences, we hope that the n will give them a better view of their own ntry (many Libyans have not traveled ex- sively in Libya), the oil industry and the nomic significance it can have for Libya. e film underlines some of the problems that erican industry has in helping a country to elop its natural resources.

Since much of the film concerns Libya, its toric landmarks and places of beauty, we e that the film will stimulate an interest in country among American audiences. Libya interested in developing tourism as one of its sources of revenue and we hope that our film will generate interest in this country."

Both Governments Aided in Production

Many hands helped clear the way for produc- n of *Libya Ahead*, authenticating its depth of information and assisting the camera crews. Libya's Ministry of Information and Guidance and the Embassy of the United Kingdom of Libya to the United States as well as the Libyan Petroleum Commission and the Tourist Department, the Federal Customs and the Federal Police were principal "partners" in the production as well as the United States Information Service and members of the United States Operations Mission in Libya.

USIA has requested prints with Arabic nar- ration for its showings and the sponsor has also been asked to make the film available for the Tripoli International Fair. Public release in the United States is anticipated "during the first quarter of 1962". The picture is timely and should be widely shown.

At right: Oasis Oil Company Medical Director, Dr. Edmondson and his Libyan assistant, Kaliffa Zentanna, examine the injured arm of a Libyan laborer in the medical trailer at the desert warehouse of Concession 32. Oasis Oil is a joint venture of The Ohio Oil Company, Amerada Petroleum Corporation, and the Continental Oil Company.

Five times a day, the voice of Islam is heard from this mosque, one of many in Tripoli, calling the people of the Koran to prayer . . .

"Education is the foundation stone of Libyan progress," the film notes. Pupils in Sebha's first grade classroom look to their teacher, Salaim Zarrugs, for inspiration and guidance in this new era.

A DuPont Farm Picture Shows How New Agricu

Above: diseases as hungry as insects can take a whole crop within a few days . . .

Guarding our rich harvests, such as this Western orchard may bring, is the mission of agricultural research scientists who constantly search for new chemicals . . .

Experiments with 12402 were continued for five years, cost DuPont over $2½ million and consumed 97 man-years of labor before the new chemical was ready for government tests.

SPONSOR: E. I. DuPont de Nemours & C

TITLE: *The Unseen Harvesters,* 25 min., produced by MPO Productions, Inc.

* * *

In infinite variety and form, plants su all life on earth. In the growing cells leaf the energy of the sun transforn simple chemicals of the earth and air co ously into the complicated chemicals r for life and growth — vitamins, fats, hydrates and proteins.

But to obtain these nutrients man waged constant war against his comp since the beginning of time. 10,000 spec insects in the United States alone mu ranked as public enemies — taking an mous toll of usable food and fiber. Di can take a whole crop — often in a few — diseases such as wheat smut, apple and tomato blight are as hungry as in Weeds try to monopolize the soil's supp water and food — take a mammoth bi of our agricultural resources.

Plants May Guard Themselves

These are the premises set up so strikin the first few minutes of DuPont's new picture on agricultural chemicals. The shows that some plants, themselves, d their own chemical fungicides and insect The giant redwood trees of California fungi that destroy other seeds; lettuce mixed with celery seeds somehow preve celery from sprouting; geranium produc own insecticide to kill Japanese bettles.

But the nature of all killers of insec

as, disease or weeds, is that they might be
ngerous to other life if their development,
duction and use are not carefully controlled.
eloping just one safe and useful chemical
lengthy, painstaking and expensive task.

se History of One Chemical

he Unseen Harvesters takes as a valid case
ory one agricultural chemical which it calls
pound 12402 — a weed killer — and goes
to tell all the ins and outs involved in its
elopment. Seven scientists — chemists, toxi-
gists, biologist and pharmacologist — take
r the film personally and tell the parts they
ved in the long trial and error development
2402.

Early in the game, the 12402 compound,
ch was experimentally synthesized shortly
r the war, was found to knock out — per-
nently — almost every kind of plant, in-
ding the toughest weeds, on which it was
yed. Since DuPont assumes every new
mical to be hazardous until proved other-
e, it must be thoroughly tested. 12402 was
nd to be just about as safe as table salt.

netrates Only the Top Soil

Other tests showed that 12402 only pene-
ed a shallow top layer of the soil in spray-
operations, leaving more deeply planted
d unaffected. Nationwide field tests proved
t 12402 was very useful in preventing weeds
sparagus and cotton crops, among others.
Hawaiian sugar cane and pineapple were other
as of immediate promise.

Here was a new way for farmers to control
eds — but would crops take up any of the chemical? Would it get in food? Would it be harmful? In a long and thorough report compiled after experimentation with many generations of rats at the University of Rochester, scientists determined that 12402 was completely safe — even if eaten in typical amounts that might be encountered by a man over several lifetimes.

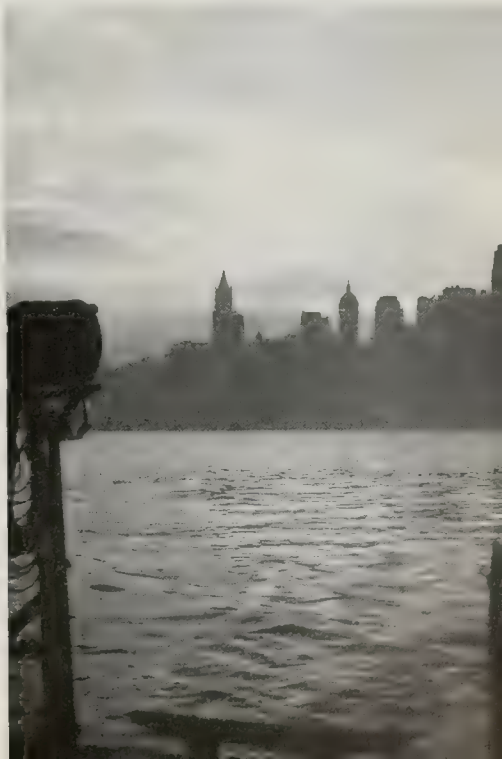
Five Long Years of Research

By this time DuPont had spent five years on 12402 —$2,560,000 and 97 man-years of work had been expended. After this, the new chemical must go before the scientists of the United States Department of Agriculture and the Food and Drug Administration in Washington. These men perform exhaustive tests on agricultural chemicals. On the question of safety, for example, the F.D.A. report on 12402 represented two years work by 13 professional people whose final statement added up to 314 pages of precise medical information.

The full report of the Washington agencies adds up to show that 12402 is a useful chemical that can be applied with no hazard to public health.

Many Hands Working Together . . .

As the harvest goes to market, the film concludes, the wonders of plants and the science of man reach a final fulfillment, representing the combined efforts of farmers and chemists, fieldmen and toxicologists, county agents and biologists, and chemical engineers.



The Unseen Harvesters was directed and photographed by Larry Madison for MPO and is being distributed by the sponsor.

Wheat is bountifully harvested from protected fields . . . food to feed hungry millions who depend on our abundant grains . . . an abundance assured by the work of science.

There is food enough for hungry city-dwellers whose populations continue to soar while farm output fortunately keeps pace . . .

ge acreages could then be protected by low-flying crop dusters equipped with sizeable quanti- of 12402 to insure thorough coverage of precious crops at critical periods of growth.

A museum of pioneer telephone equipment is featured in this scene as old Walt Jensen cleans up his office, while grandson Peter waits out the film's climax — cut-over time in "The Independent."

Proud to Be Called "The Independent"

The Dramatic Story of One of the Nation's 3,200 Independent Telephone Companies

SPONSOR: The U. S. Independent Telephone Association.

TITLE: *The Independent,* 28 min., color, produced by Parthenon Pictures (Hollywood).

☆ The 11 million American families and business organizations served by the 3,200 independent telephone companies throughout the nation are well aware of the high standards of service modern installations and "good neighbor" philosophy which typify the average "independent" and makes him a formidable competitor. But of this "competition" the subscriber knows little and cares less. It is a tribute to the American free enterprise system that any telephone user on the continent can pick up his phone, put in his call and get his party on Main Street, Fifth Avenue, Sunset Boulevard or even in the Kremlin.

Independent telephone companies operate 10,700 exchanges with their 100,000 employees. They serve Hawaii, Alaska, Puerto Rico and British Columbia. They also serve five state capitals and cities like Rochester, Ft. Wayne, and Santa Monica-West Los Angeles in California. All are integrated with the worldwide network of long-distance lines, microwaves and cables. Against this backdrop of reality, audiences are being introduced to *The Independent,* in a 28-minute color film.

Designed to Be Used by Local Companies

Parthenon Pictures produced this film for the 800 members of the U. S. Independent Telephone Association — but it was designed to be a *local* picture for *local* use— and that is the way the story of the Independent "Jensens" comes through in warm, human terms.

Old Walt Jensen's father, the town druggist, started the local phone company when he tired of walking up to Doc McKinnon's every time he couldn't read one of those "hen-track prescriptions". Mother took care of us kids with one hand and ran the old switchboard with the other. Then Gregory's bank put up the money to string the first wire out along the farm roads and . . . "well, here we are."

There's Suspense as Cut-Over Time Nears

"Where we are," is a tense night of drama when the "local" telephone company is getting ready to "cutover" to the new long-distance switchboard that is waiting to be born in a modern exchange building. Walt's son, General Manager Ed Jensen, is in charge and *his* son, Peter, is the equipment maker's expert on the job. The boys down in the old cable vault are getting ready for the big cut. There's a natural climax and a fine moment of relief when the changeover comes off without a hitch . . . and that first caller rings through!

The Jensens, all three generations of them,

(CONCLUDED FOLLOWING PAGE FIFTY-FOUR)

This modern exchange is the fulfillment of the hopes and labors of the four-generation family whose story is told in "The Independent."

The Message of "See a Pin"—

Don't Count on "Luck" to Prevent Home Fires

SPONSOR: National Board of Fire Underw

TITLE: *See A Pin . . .,* 13 1/2 min, color, duced by Audio Productions Inc.

* * *

☆ An important part of the work of the tional Board of Fire Underwriters is t constantly on the alert for new ways to s information about fire prevention. As o the most prolific and successful users of lic information films, the National Boar

"Mr. Luck" is the ghostly hero of "See until he deserts the hapless Johnson fami

Little Jimmy Johnson's careless moment have brought tragedy, except for "Mr.

attacked the fire prevention problem in of ways.

For instance, recent films have bee such subjects as a description of the nat fire for science students, a cartoon to youngsters to be careful of fire hazards, technical film on the work of efficient fi departments. Some of the films preach fir vention in a straightforward way, while attack the problem more obliquely.

Preventive Lessons for Family Viewir

The newest approach is *See A Pin* which is entertaining as well as instruc and designed to carry the fire prevention to the average family in the home.

Causes of home fires are not many in

Overloaded household electric circuits are a prime cause of needless fires in the home . . .

...: smoking, playing with matches, bad housekeeping and improper fusing are the most important, and these become the areas on which the plot revolves.

Fred Johnson, head of our film family, finds a pin in his driveway and — although he doesn't know it — wins the services of a ghostly "Mr. Luck" for a whole day. "See a pin and pick it up. All the day you'll have good luck."

The Little Things That Cause Big Fires

As we follow the Johnsons throughout the day Mr. Luck exerts his magic to prevent overworking the electrical circuits; he coaxes up a rainstorm to put out a fire that little Jimmy Johnson had started behind the garage while playing with matches; and he conjures up a blast of noise on the radio to wake the sleeping Fred Johnson whose cigarette had kindled a pile of papers on the floor.

But the Johnson family's luck runs out at midnight when a fire started by spontaneous combustion in waste rags in the basement burns the house down. They had trusted to luck just a little too long.

Fine Example of Cinematographic Technique

See A Pin . . ., which was directed by Audio's Hans Mandell, makes good use of the cinematographer's "ghost" technique in which the colorful Mr. Luck is superimposed on the Johnson family scenes. The family part of the picture was shot in a real house in New Jersey while meticulously careful records of camera placement, horizontal and vertical angles and distances were kept. Sixty days later, the ghost shots were made in New York and matched perfectly with the earlier footage. *See A Pin . . .* is a happy blend of fact and fantasy, and should prove to be most successful as a public information film on television, as well as among 16mm audience groups. ☆

A Record of Safety Film Utilization

☆ *See a Pin,* most recent addition to this continuing film program of the National Board of Fire Underwriters, enlarges on a long, notable record of safety education via the film medium. Audiences totaling millions are being reached annually and several of these films have received national honors.

At right: solar cells are attached to experimental telephone communications satellite designed at the Bell Telephone Laboratories, where the solar batteries were also invented. Band around the center is the antenna, which sends and receives the signals. Bell System communications satellite scheduled for launching next April, will be the first to be built and launched at private industry's expense.

The Far Sound Reaches for the Stars

Top-Flight Color Film Shows Achievements and Goals of Bell Laboratory Scientists

SPONSOR: The Bell System Companies.

TITLE: *The Far Sound*, 27½ min., color, produced by John Sutherland Productions, Inc.

☆ Away back in 1911, "animal dances" were the new fad as the fox trot, the turkey trot and the bunny hug captivated "steppers" during Mr. Taft's era in the White House. Cy Young was finishing up his fabulous baseball career and the "unsinkable" Titanic was soon to make her maiden voyage.

On May 8th of that year, for the first time, a man in New York could talk into a telephone and, with the aid of various devices, could be heard more or less distinctly in far away Denver. But that seemed to be about as far as people could communicate along the telephone lines.

The story of how telephone distances were extended, sounds made clearer and costs drastically reduced, is the fascinating narrative of *The Far Sound*, a new 27½-minute color film sponsored by the Bell System companies and produced by John Sutherland Productions. It is narrated by television news commentator Chet Huntley.

The Far Sound reveals that bell Lab's scientists uncovered many of nature's secrets in their effort to extend the range of telephone communication. In 1911 the outlook was bleak for conquering distances beyond those between New York and Denver. But by 1915, Bell scientists and engineers had found the way . . . and people could talk by telephone from coast to coast.

(PLEASE TURN TO CONCLUDING PAGE 54)

The first transcontinental telephone line was front page news in 1915. Then, a 3-minute call cost $22.00; today it costs about $2.00.

Before the dial was invented, all connections were made by "the most valuable invention of all time . . . the girl operator."

Group of Japanese audio-visual specialists on a five-week visit to the U.S. exchanging experiences with their counterparts at N. Y. meeting.

Chairman of the conference was Dan Rochford, Standard Oil Co. (N. J.). He noted that, despite language barrier, he was sure that both groups would have sound meeting of minds, common interests — and they did!

Teize Mori of Iwanami Productions, Tokyo (second from left) responds to query, noting that expert Eastman color and sound dubbing facilities are available throughout Japan. **Below:** Wm. J. Connelley says the way to sell management on audio-visuals is to prove they will do job at reasonable cost while providing utmost clarity of understanding.

Japanese, U. S. A-V Specialist Exchange Views at N. Y. Meeti

THIRTEEN MEMBERS of the Japanese Industrial Audio-Visual Education Specialists' team, visiting the United States on a month's tour arranged by the Agency for International Development, took part in a two-day conference in New York, December 7 and 8, with audio-visual specialists from leading United States firms.

The program of the visiting Japanese A-V men in New York was coordinated by Daniel Rochford of the Standard Oil Company (NJ). His committee was composed of the following audio-visual specialists: Fred Beach, Remington Rand Univac; James Brunson, American Telephone & Telegraph Company; William Connelly, Union Carbide Corp.; Alden Livingston, duPont Company; Sheldon Nemeyer, General Dynamics Corp.; Frank Rollins, E. R. Squibb & Sons; and D. G. Treichler, Socony Mobil Oil Company.

Meet in Esso's Auditorium

The conference, held in the auditorium of the Esso Building in New York, consisted principally of question and answer discussion which proved to be beneficial to participants from *both* countries.

Hiromi Ogura, leader of the Japanese group, and Sales Coordination Manager, Mitsubishi Electric Manufacturing Company, expressed much interest in the way audio-visual techniques have permeated American industry so extensively. In Japan, he said, audio-visuals are constantly growing but are still used more as "special" training methods and are not "taken for granted" as much as they are here.

Japan Favors Sound Slidefilm

In corollary material presented by the Japanese group, it was stated that "auto-slides" (sound slidefilms) and panel boards, rather than motion pictures, were the most commonly used devices in industrial training in Japan, principally for economy reasons, but also because they are often considered more "specific and illustrative".

In Mr. Ogura's company — Mitsubishi Electric — audio-visuals first came into extensive use in 1954 after two years of intensive study on their value and possible effectiveness. Presently the company uses audio-visuals for

Union Carbide's Connelly (c... confers with Tomohisa Furuta, ... ko Securities, and Minoru ... Japanese Visual Education A...

both job training and commu... tion. As examples of the l... motion pictures and auto-... have achieved outstanding r... in creating an atmosphere c... cive to a cost reduction camp... improvement of safety-consc... ness and implementation of ... classification and wage ince... systems.

Ground Rules for Audio-Vi...

Mitsubishi Electric has ... lished three ground rules for ... sidering audio-visuals:

1. Do not fall into the da... ous trap of believing any ... method to be omnipotent. A... visual teaching is only one ... multitude of alternative met... It never is a solution to all ... lems. Nothing is indeed fa... from truth than assuming th... objective of training is fulfill... merely showing motion pi... and slides.

2. Motion pictures and ... are not all of audio-visual tea... materials. The company ... good use of mock-up simul... charts, diagrams, photograph... ords, tapes, radio, television.

Next to Gen. Dynamics' Shelde... meyer (foreground) is group's ... preter, Nobuo Kawamura, of ... Department's Agency for In... tional Development.

Tsuneda, Mitsubishi Shipbuilding & Engineering Co., explains difficulty of alerting top management to value of audio-visual communication. U. S. group, facing similar problem, welcomed Mr. Tsuneda as "brother!"

tions, displays, exhibits and role playing.

There is no better teaching material than the real thing and no better teaching method than actual experience. All other methods are the means of expedience which are used because of limits in time, space and money.

Industry Sponsored 348 Films

Japanese film statistics show that in the fiscal year 1960, 348 industrial films were sponsored by industrial firms and 319 by the government. There were 199 film producers who made 970 educational films as well as the 667 sponsored films noted above. There are six "major" industrial film producers in Japan who do 80% of all this production etc: Iwanami Productions, Nippon Shinsha, Nichiei Kagaku, Eisu, Shin Riken and Yomiuri.

Center Promotes Audio-Visuals

The Japan Productivity Center has shown considerable interest in audio-visual activity since its inception in 1955. Tetsuo Sangyi, a member of the visiting group, is a staff member of the center's audio-visual section. His aims to promote audio-visual activity in industry. A productivity film library has been set up which loans out materials to industrial concerns. The Center also loans out experts to help industry with audio-visual problems.

More lately, the Industrial Audio-Visual Research Council has been formed in the Center jointly with leading business firms, producers and distributors and other organizations associated with audio-visual activity.

Following the conference at the Sogo Auditorium, the group visited the General Dynamics audio-visual center and the Socony Mobil headquarters training center.

ENTERING A FIELD of great importance to all industries seeking young people to fill jobs of tomorrow with *motivated* applicants, the Eastman Kodak Company has, appropriately, turned to the film medium to show teenagers the opportunities awaiting them in photography today.

Kodak's new film goes a step beyond. The company is among the first, if not *the first*, to seek the cooperation and counsel of a professional guidance group in the preparation of its picture.

Cameras and Careers, the new 28-minute, 16mm sound and color film, bears as part of its title, "Made with the cooperation of the National Vocational Guidance Association."

Needs Were Clearly Indicated

It came about as a result of Kodak's recognition that young people need to know about career opportunities in photography — as well as the way photography can be related, as a tool, to whatever career they embark upon.

The film was developed as the result of Kodak's perception of several needs. A U.S. Government survey indicated that not enough young people were interested in becoming X-ray technicians or medical photographers. Kodak correspondence and research showed that most well-informed adults — and some science teachers — were not aware of the extent to which photography has become an important tool in science and technology — in spite of the fact that photography plays a large and vital role in scientific research.

Survey Discloses the Problems

Two surveys were made which showed a lack of knowledge on the part of students and adults of Kodak's own contributions to

Youth's Future in Photography

Career Opportunities in Many Fields Well-Presented in This 28-Minute Color Film Prepared With Aid of Guidance Experts

science and research. Photofinishers claimed difficulty in finding high school graduates capable of helping them run their technical processing machinery. Yet, a large volume of correspondence received by Kodak people showed that youth *was* interested in photography as a career.

With these problems in mind, Kodak considered the best means to promote youthful interest in a photographic career. First, a good deal of thought went into determining the right audience — an audience which would have to satisfy two basic requirements.

1) It would be necessary to reach, please, and interest the right adult audiences — teachers and youth leaders.

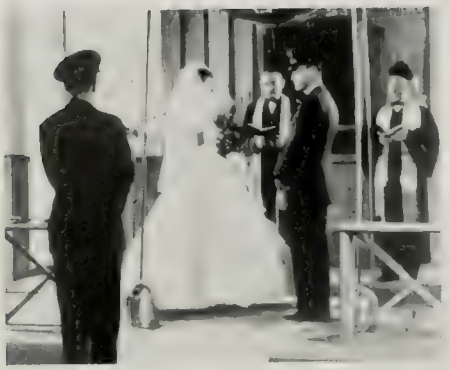
2) It would be necessary to reach, please, and interest youngsters with their careers ahead of them.

Finding the Right Audience

Where would Kodak find this audience? The answers seemed to be found in school guidance counselors, Boy Scout and Girl Scout leaders, Campfire Girls of America, and other youth organizations with career exploration programs. Kodak also took into account that many high schools throughout the country have "career days."

It soon became apparent that the most effective way to reach these audiences was through the medium of the motion picture. It could dramatically highlight the job opportunities by showing some of the interesting applications of photography in our society. There are good and accessible channels for distribution of 16mm motion pictures to schools.

Visits to youth leaders and vocational guidance people also confirmed that such a movie could be recommended in Boy Scout explorer program literature, Girl Scout career guidance activities, Boys Club publications, Campfire Girls publicity and others.



How to Get School Acceptance

The next question was how to get acceptance for the film in schools? Some educators possess an inherent suspicion of business-sponsored films because often "a taint of commercialism" creeps into the finished content. And the sponsor's viewpoint may not coincide with the existing curriculum requirements.

Thus at first glance it was feared that educators might challenge the ability of Kodak to sponsor a film which would match the needs of a guidance program.

John Debes of Eastman Kodak approached the National Vocational Guidance Association with the suggestion that the NVGA and Kodak might help each other by co-operating on a guidance motion picture. Debes pointed out to the NVGA that educational institutions often accuse industry of fail-

An Air Force Chaplain officiates at a Jewish wedding ceremony at Scott Air Force base . . .

Story of Faith and Flight

An Air Force Sponsored Picture Shows Active Life and Purpose of Chaplains

SPONSOR: Hammond Organ Company, in cooperation with the U. S. Air Force.

TITLE: *Of Faith and Flight*, 20 min., color, produced by Dallas Jones Productions, Inc.

☆ The role of commissioned Chaplains who represent the various religious bodies in the U. S. and who help sustain the spiritual and moral welfare of men and women in uniform is the theme of this new color film.

Filmed at Scott Air Force Base, Illinois, for distribution through the Air Force' sponsored film program, the film was made possible by the Hammond Organ people. But Hammond instruments play in a minor key, for the essence of this picture is its numerous vignettes about Air Force Chaplain activities. They perform 21 religious services every 60 minutes; officiate at 19 marriages, 49 baptisms and seven funerals every 24 hours.

On the role of religion in defense, Ch. Major General Terence P. Finnegan, Chief of Air Force Chaplains, USAF, says, "the nation and the community will survive only because of the strength of will and greatness of heart gained through the action of religion in a man's soul."

Of Faith and Flight is more than a statistic; it fulfills Chaplain Finnegan's tribute to it in which he said, "this film has gone deepest and portrayed it best" in telling the complete story of the Chaplain's life and his purpose. More than 300 prints of the film will go to Air Force bases throughout the world.

And another Chaplain presides at christening.

Report on Diversification

The Machines and Processes of American Machine & Foundry Are Shown in Action

SPONSOR: American Machine and Foundry Company, New York.

TITLE: *The Magic Hands of AMF*, 22½ minutes, color, produced by Farrell and Gage Films Inc.

☆ To explain the wide diversification of AMF, the film shows the many and varied products turned out by AMF-made machines and processes. The astonishing machines, which supplement mens' hands and brains making faster and more economical production of goods, are the "magic hands" alluded to in the title.

Automatic pretzel machines turn out millions of these morsels in this scene from "The Magic Hands of AMF" produced by Farrell & Gage.

The film, which seeks to cultivate the interest of stockholders, security analysts, customers and employees, makes its point with scenes of machines turning out cigarettes and cigars by the thousands, pretzels by the millions, products for leisure time, the home, for the government, in fact in almost every area of life.

Painting Facts for Industry

An Engineering Approach to Lower Costs

SPONSOR: Hercules Powder Company.

TITLE: Maintenance Painting — An Engineering Approach to Lower Costs. 25½ min., color, produced by Farrell and Gage Films Inc.

☆ Commercial and industrial structures are painted *regularly* as normal maintenance procedure. This requires large expenditures for paint and labor and the question of whether it is being done right is a matter of concern for plant managers, superintendents, maintenance engineers, and purchasing agents.

Paint expert Kenneth Tator discusses cost parisons for industry viewers of the He sponsored, "Maintenance Painting."

There is an engineering approach t problem and it is answered in this film features Kenneth Tator, a noted author the subject. Tator explains the proper m of testing and evaluating paint product the correct methods of application. By tematized approach, Tator points out, costs are lowered. The film is distribu specialized plant audiences by Hercules.

Kodak
TRADEMARK

8mm sound movies sell giant machinery *before it's built*

Mr. R. E. Morton, Executive Vice President, Morton Manufacturing Company, uses a Kodak Sound 8 Projector to add his voice to the sound track of an 8mm movie made in his plant.

nting ideas for custom machine tools, materials
ling equipment and other custom industrial
inery by talking from blueprints and models
s too much to the prospect's imagination, ac-
ing to the Morton Manufacturing Co. of Mus-
n Heights, Michigan.
lund movies, they felt, could show more and tell
in a more understandable way. *But what*
costs?
en they heard about the new Kodak Sound 8
ctor—the portable machine which has raised
ost 8mm movies from a home hobby to a prac-
tool for industry.
th the Sound 8 Projector, Morton could: 1)
their movie-making costs low; 2) add their own sound to the film and change it at will by using this projector's built-in recording system; 3) be sure of a professional movie presentation, since this projector enlarges tiny 8mm movie frames to fill room-size screens with optimum detail and definition and plays back with excellent sound quality.

Make movies themselves

By photographing scale action models and piecing this film footage together with scenes of actual working machinery of designs similar to those they want to demonstrate, Morton can assemble a very informative movie.

Then comes the sound. Voices, machine noises on location, even background music are first tape-recorded, then transferred to the 8mm film magnetic sound track through the Kodak Sound 8 Projector recording system.

The Sound 8 Projector works like a tape recorder, even has its own microphone. Recording, erasing, re-recording (a different sound track for each audience, if need be) is simply a matter of "recording" while projecting the film.

Morton keeps a Kodak Sound 8 Projector in offices at Philadelphia, Muskegon, and San Francisco, so that demonstration films can be shown at every opportunity.

If this example gives you ideas, call your Kodak Audio-Visual dealer for a demonstration, without obligation, of the Kodak Sound 8 Projector and its low-cost movie potential.

Kodak Sound 8 Projector 〉 **EASTMAN KODAK COMPANY,** Dept. 8-V, Rochester 4, N. Y.

Librarian to All the People

Story of Books in Dakota-Land Told by Max Howe's Camera in "Open Door"

SPONSOR: South Dakota State Library, Pierre, South Dakota.

TITLE: *The Open Door*, 27 minutes, color, produced by Max Howe, Rapid City S. D.

☆ *The Open Door* is a story of books in Dakota-Land from pioneering days to the present day of the Bookmobiles. By drawing upon the states pioneering heritage, the film strives to develop an interest in the printed word and to reach those people who seldom read.

In those early days, books were held in high esteem by our pioneer forebears. Precious

Early-day exchange of scarce books between schools was made by volunteer horseman.

volumes were exchanged between schools by volunteer horsemen. Pioneers worked with their own hands building schools and libraries with logs and stone.

In the 1930s a dedicated librarian personally traveled out to the farms and ranches to create an interest in books and culture. Today there are bookmobiles.

While concerned with books and libraries, the film offers glimpses of the scenic grandeur of South Dakota.

A South Dakota bookmobile brings volum youngsters in a far-off ranch community with them the power "to reach heights of or . . . escape into never-never land fror and all its problems . . ."

Suffer the Little Children

Lack of Food, Knowledge of Nutrition Spells Tragedy to the "Hungry Angels"

SPONSOR: United Nations Children's Emergency Fund

TITLE: *Hungry Angels*, 22 min, color, produced by Reimon Productions (Guatemala). Directed by Marcel Reichenbach.

☆ Three Guatemalan babies are born on the same day in this film, in the same maternity ward. Two gradually weaken and become gravely ill—only because their parents did not know how to feed them adequately. The third —with proper food—thrives.

Maria, the first child, is the daughter of poor farmers whose life is hard. There is little money for food, but worse — Maria is fed only pale imitations of a proper diet, and her poor wasted body received little help fror incantations of a witch doctor.

Pedro, a Guatemala City boy, does fi first on hospital-prescribed food incl powdered milk, but weakens when his g mother begins to guide his diet with old v tales about nutrition.

Carlos, thanks to proper diet, is a joyfu healthy boy.

Though production quality on this f leaves much to be desired, the three chi are always appealing and sometimes h rending to see. Our interest in them over ches other deficiencies in the film. Cor ches the wonderful natural beauty of tral America and its crushing poverty is ribly vivid.

The film is narrated by Dr. Nevin S shaw, Director of the Institute of Nutriti Central America and Panama (INCAP) whom it was produced with the cooperati the Guatemalan Government. Through good work of INCAP both Maria and F are finally made dramatically well again.

Hungry Angels is available for rentals ($ or by purchase ($75) from Association F Inc., 347 Madison Avenue, New York.

- **Interchangeable Deck . . . . . $ 745.**

Acmade Foot-Operated Splicer with Tungsten Tipped Blades

This splicer is constructed, as is usual with ACMADE products, of the finest materials and workmanship. All castings are of the best quality and the top body and cutter arms are seasoned to prevent distortion after machining. The machining is carried out to limits of ± .0005″ in order that the cutter blades shall close in a dead parallel manner. The cutter blades are made from stainless steel with Tungsten Carbide inserts, and afterwards ground lapped and polished to a limit of ± .0002″ thickness and the cutting edges relieved by 1°. The Tungsten Carbide inserts will have indefinite life and will not require sharpening as with other types. A heater unit is installed in the top body of the machine. The top light in a well glass fitting is attached to the body of the machine and also an inspection light in the waste bin together with cement bottle and brush. A scraper block is supplied and also a scraper block setting jib and support shelf rubber-covered. The whole machine is finished in first quality grey hammer and all metal parts other than cutter blades are hard flash chromed.

Sponsors' Film Safari in East Africa

Factual Films' Mobile Cinema Vans Bring Features, Ad Shorts to Thousands of Rural Villagers Along Its Six Circuit Routes

AN AFRICAN safari is an everyday occurrence for an employee of Factual Films, Limited. Equipped with one of the company's specially constructed "mobile cinema" vans, he's off to Mount Kenya or Kilimanjaro. Purpose: Film distribution for sponsors.

The pattern of trade in East Africa is changing rapidly, John C. Gee, managing director of the motion picture company, which works out of Nairobi, Kenya, has indicated. An ever-increasing proportion of the total goods sold is being purchased by Africans whose cash incomes, especially among farmers who are receiving official aid and encouragement, are increasing very quickly.

Follow Best Income Routes

To help tap this ever expanding market, Factual Films has, since 1958, been projecting programs which include feature films, shorts, newsreels and sponsored pictures. The company's "hunters" follow carefully selected routes where the earning and spending power of the native population ranks highest. The programs offer an advertising medium especially suited to a semi-literate people.

Two-hour shows are given regularly in 183 villages. In order not to overload the program, advertising matter is limited to 15 minutes of direct advertising in each program. This limitation does *not* apply where long "prestige" films of high entertainment or educational value and low direct advertising content are shown, but primarily affects straight screen "ads."

Thousands at Open-Air Shows

The safari is repeated each month over the same route with different programs and changes in commercial material as desired by the advertiser. Audiences of two to three thousand attend the program admission-free. Since it is dark at 7 p.m. all year round in East Africa, the shows can take place in the open. Music, played for half an hour before each performance, helps to draw the native audience.

Six circuits have been chosen for Factual Films' mobile advertising service. Circuit No. 1 (Mount Kenya) and No. 2 (Kilimanjaro) each show films for 25 consecutive nights in 25 centers of population. The remaining five days in each month the vehicles return to home base for servicing and operator's time off. Circuit No. 3 (Nyanza) commences on the first of each alternate month and shows films in 50 villages on 50 consecutive nights before cinema operators return for a 10-day interim period.

Show After Crops Are In

Circuit No. 4 (Mwanza), unlike the other circuits which run all year round, operates only from June through November, this being the season when the cotton growers of the area receive payment for their crops and money is plentiful. Twenty-nine shows are given each month.

The fifth circuit (Uganda) also runs for 29 nights per month but operates on an all year round basis, as does Circuit No. 6 (Mombasa).

Monthly charges for showing an advertising filmlet range between Shs. 400 and 820 per month depending upon the length of the commercial (up to one minute) and the number of programs on the circuit.

Factual Films will exclude competitive products on a particular circuit if an advertiser has a contract for one minute on ... more circuits or two min... one circuit.

"POLAROID" AND "POLALINE"®

$1.50
24 Hours
Film Processor

55¢
90 Seconds
Yourself
(with a Polaroid Land Camera)

To make your own black-and-white slides – quickly and economically – here's all you have to do: snap a picture with a Polaroid Land Camera loaded with special transparency film. Then pull a tab, wait a moment and open the rear of the camera.

There's your transparency.

After a quick hardening and mounting in a snap-together frame, the slide is ready to be dropped into a projector. Total time: about 90 seconds. Total cost: about ⅓ the price of the average black-and-white slide.

A new type of transparency film, PolaLine film, is now available. It's been designed especially for line-copy slides and it produces crisp, black lines and clear, transparent backgrounds. These are 3¼ x 4 transparencies for standard lantern slide projectors.

There are also continuous tone films for both standard lantern slide projectors and for use in a complete Polaroid Land system that employs 2¼ x 2¼ slides in a Polaroid projector. (Development time for continuous-tone slides is two minutes.) All three projection film types can be used in any Polaroid Land Camera that uses 40-series films (except the J-66).

Sound good? It is. There's no better way to make transparencies. Send in the coupon for more information.

Film Facts on Building of Concrete Fall-Out Shelters

☆ While official recognition of civil defense needs appears to have veered toward Federal support of large-scale community shelters (as opposed to the family unit), basic data on construction techniques is a common need.

Answering that need in part for builders and planners of fallout shelters is a 13 1/2-minute color film titled *Forming Your Future*, sponsored by Gates & Sons, Inc., Denver manufacturer of concrete form ties. Produced by Edward Hawkins Productions of that city, the film shows how concrete can be used to build a shelter from the laying of a base slab to the completed structure and its interior equipment.

Office of Civil Defense-approved data is the basis of the filmed material. Prints will be available through Civil Defense offices, the Portland Cement Association and via Gates and Sons, Inc., 80 So. Galapago St., Denver, Colorado.

Film Aids Christmas Appeal for Foster Parents' Plan

☆ A new documentary film, *A Child Across the Sea*, which tells of a Chinese refugee child who is helped by a family in America, was played by many television stations across the country as a Christmas attraction last month.

The decision to release the film, via Association Telefilms, during the Christmas season came as a result of the nationally-syndicated column by Inez Robb who suggested that her readers "adopt" a Foster Parents' Plan child for Christmas "in the name of the man or woman who has everything." Miss Robb is the foster parent of an eight-year old Chinese girl whose family fled from Red China to Hong Kong.

REPORT ON URBAN RENEWAL IN LITTLE ROCK

THE FACE-LIFTING of America's urban areas is being spurred by the Kennedy Administration as well as by civic leaders and re-development groups throughout the land. Urban renewal programs are everywhere moving into high gear and one of the high spots is reported in Little Rock where rehabilitation of a 508-acre tract is bringing new streets, playgrounds and drainage . . . *new* values and *new construction*.

Little Rock's urban renewal story is the subject of a 13-minute sound motion picture, produced in both color and black & white. It's title is *Quest;* the sponsor is the city's Urban Progress Association, Inc. Creative Communications, Inc. of Little Rock produced this comprehensive report.

$6,000 model shown in film shows North view of Downtown Little Rock, Ark.

Above (l to r): Dowell N. Naylor, Executive Director of Little Rock Housing Authority; James Tiller, President, Creative Communications, Inc.; and Raymond R. Rebsamen, Pres., Urban Progress Association.

Quest describes the development of the plan for the renewal and rehabilitation of Central Little Rock, a 508-acre area covering the entire central business district of the city as well as the adjacent residential, commercial and industrial neighborhoods.

Project Initiated in 1950

This comprehensive project was first approved in November, 1959 and the city was the first in the nation to undertake the rejuvenation of its downtown and the surrounding area through the process of urban renewal according to the provisions of the 1959 National Housing Act.

Working under the direction of Raymond Rebsamen, head of the Association which sponsored *Quest*, producer James E. Tiller has created a well-designed, often thought-provoking documentary on this development. A fine 49 square-foot model of the new area serves as a guide-line for the future, while scenes of the present take citizen-viewers into the plan's needs and the benefits to the community. As narrator George Moore describes an opening scene showing a metal abstract in f... Little Rock's Tower buildin...

"This is called Quest. H... artist has expressed in n... symbol of every man's qu... happiness. We mention it ... we are going to tell you ... city's quest for progress an... perity.

"This, then, is the sym... Little Rock."

Some Useful Booklets and Fact Sheets Available Without Cost If Requested on Company Letterhead

Special Effects Sans Matte

☆ A four-page pamphlet "Special Effects Without Mattes" is offered by Animation Equipment Corp. The pamphlet (reprint of an article from a national technical magazine) tells how aerial image opticals can expedite production of effects, cut laboratory costs, and avoid the quality loss inherent with multiple-generation printing procedures.

Pamphlet shows projector and camera set-up and examples of a three-way split-screen effect, titles superimposed over live action, animation over live action, and actual products over live action. Request Literature No. 705.

* * *

Rear Projection Know-How

☆ The mechanics of rear-screen projection, the advantages and disadvantages of this method, and costs, are covered in a four-page semi-technical report "Rear Projection — An Expanding Technique for Projected Media".

The report, published by the H. Wilson Corporation, was written by J. W. Dunn, Jr. a consultant in audio-visual education. Ask for Literature No. 706.

* * *

Projection Lamp Guide

☆ A projection lamp replacement guide for every type of projector has been made available by Westinghouse Lamp Division. To use the 12-page guide, the reader selects wattage of the projection lamp desired; then refers to projectors classified by type — 8mm, 16mm, slide, etc. — and to specific models listed by manufacturer and number.

The lamp designation number is given and the ASA number. Also shown are replacement lamps for editing equipment and sound reproducer lamps. Ask for Literature No. 707.

* * *

New Audio-Master Catalog

☆ A new two-color catalog listing its entirely new re-designed 1962 line of playbacks & slidefilm projectors has been released by Audio-Master Corp. The catalog contains a full listing and description of hi-fi record and transcription players — monaural and stereo — designed for industrial and educational use, as well as sound slide-film projectors and accessories. Ask for Literature No. 708.

* * *

Colburn's Editing Comment

☆ "Colburn Comments on Editing" a 12-page booklet put out by Geo. W. Colburn Laboratory, Inc., gives tips on professional editing, the preparation of "A" and "B" rolls and a sound track, and the type of editing necessary to do the job.

This booklet weighs the pros and cons on how much of the editing can be done by the film unit and when the editing job should be turned over to a professional laboratory.

Factors to be considered include cost of professional editing equipment and use, plus the economics involved in hiring full-time, experienced technicians. Request Literature No. 709.

Catalog of Studio Lighting

☆ Beckett and Leonetti Lighting and Sales Co., Hollywood, has issued a new catalog describing, features, specifications, accessories and applications for Master Light, Master Fill, Master Control, Master Six and Master Three Kits, Master Stand and Masterlume Reflector units, a schedule of rental rates on a wide range of equipment, and a description of facilities offered producers.

The Masterlight Cine Rental service offered by the company provides complete production facilities where they're needed. Included are payroll and provision of experienced crews, lights, grip equipment, exterior equipment, dollys, parallels, stage lighting and stage rental, transportation, and complete contracting. The company maintains cross-country rental stations. For a copy, write the Reference Shelf, checking Literature No. 710 in box below.

* * *

Lab-TV Offers Price List

☆ Lab-TV, New York, has just published a price list of its services. A specialist in developing 16mm reversal film in black & white or color, the company's other services include: work prints, color-to-color prints, fades, dissolves, timed prints and edge numbering. For a desk copy of the Lab-TV Price List, check Literature No. 711 in the form on this page.

* * *

How to Prepare Visual Art

☆ A new, free edition of a 16-page booklet entitled, *Practical Specification For Visual Aids II*, has recently been published by Admaster Prints, Inc., 425 Park Avenue, South, New York 16, N. Y.

The booklet has been designed to help anyone preparing a meeting in which visual art will be used or who is preparing art work to be used for slides or film strips. The booklet contains such information as: format for art for all sizes and types of slides; lettering size in relation to audience; formula for determining screen width; screen width in relation to number in audience; filmstrip footage counting; and maximum visibility color chart.

Check Literature No. 712 for your copy of this booklet.

New AUDIO-VISUAL Equipment

Recent Product Developments for Projection and Production

Titler & Special Effects Kit

Titler and Special Effects Kit Is Announced by S.O.S.

☆ A new Titler and Special Effects Kit has been announced by S. O. S. Photo-Cine-Optics, Inc. All parts including a firm vibration-free platform are now made of a greater strength so that the S. O. S. TG 1V Titler can be used for 16mm and 35mm cameras.

Built with optical precision, the Titler has horizontal and vertical adjustment of camera carriage and keyway and an alignment attachment for maintaining optical axis on the title board center. It allows for smooth operation in either a horizontal or vertical position. A revolving table for making miniatures and lifelike reproductions with still or movie cameras is also furnished.

Prices range from $199.50 to $395.00 depending on model selected.

* * *

Wide-Screen Lens Available for Filmosound Projectors

☆ A newly-designed wide-screen lens attachment that will equip the new Filmosound projector line to show 16mm prints of Cinemascope movies is now available from the Bell and Howell Company.

This auxiliary lens, originally developed for use by the armed forces, meets rigid military specifications. It utilizes cylindrical elements to allow greater light transmission, and has a separate focusing ring to assure sharp picture quality. It is available from retail camera specialty stores and Bell and Howell audio-visual representatives for less than $170.

* * *

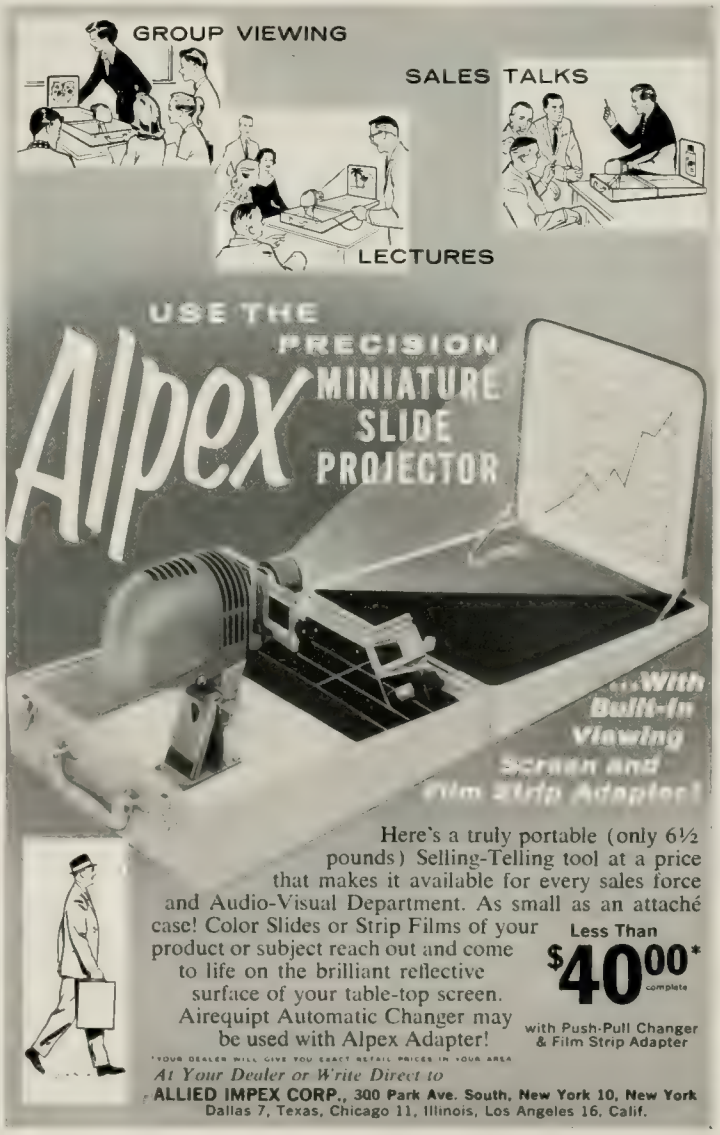
FilMagic in New Packages

☆ The Distributor's Group, Inc., of Atlanta Ga., announces that FilMagic-Long Life Tape Recorder Cleaning and Conditioning fluids now appear in new packages and combinations of fluid. The advantages of this new packaging are that the dealer can break open the new packages and sell the bottles individually, without disrupting his assortment of stock.

Florman & Babb Announces a New Acmade Precision Splicer

☆ Another new product from Acmade, Ltd., of England — the Acmade Precision Tungsten Carbide Splicer — is now available from Florman & Babb, Inc. This table model hot splicer has several new and unique features which make it one of the most useful splicers presently available.

On the 16-35 combination model, both sets of pins are retractable, which permits center placement of the 16mm pins, consequently, this splicer can be used for A & B roll splicing.



The right-hand block is specifically designed for easy, efficient back-scraping of films using the pre-set hand scraper.

Additional features include stainless steel blocks precision fitted with tungsten carbide cutting edges and a thermostatically controlled heater maintaining a constant 100 degree temperature.

Prices for the various models available are Model 16, $299; Model 35, $299; and Combination Model 16-35, $399. Full particulars on the Acmade splicer may be had from F & B, 68 West 45th Street, New York 36.

STRONTIUM-FREE MILK

(CONTINUED FROM PAGE 23)

process involved removes the greatest part of Strontium 90 from radioactive milk and is the subject of a new film explaining just how it all works.

Strontium Free Milk, a Stand-by Process, with animation and live action, has been produced by USDA's Motion Picture Service to show the dairy industry the step-by-step procedures of this Martian-type machine. Both film and device were previewed, in part, at the USDA's Beltsville, Md., research center on December 19. At this showing complicated procedures inside the machine were laid bare on film for industry, scientists and government officials.

In lay terms, the continuous process for "cleaning" milk entails making the raw milk less acid, straining out the Strontium 90 with resin, washing the resin with salt water and starting all over again. USDA estimates the film will be in great demand as is another year-old, 23-minute picture titled *Fall-out and Agriculture*. This film shows how fallout affects crops and livestock, indicates steps for handling farm commodities and the land after radioactive dusts have settled.

The new film will be circulated via the Department's film library.

Ned Pre-Production Plan

Kodak's experience in making *ars and Careers* underscores ed for pre-production plan- In making films for school s, industry does well to seek expert guidance from educators themselves. They know their own speciality, which is students. They can counsel industry on how much material students can absorb, and how fast; they know what the limits of student knowledge are, and how wide the vocabularies.

When educators and filmmakers work out such areas together, the resultant films are well on their way to doing their jobs successfully. And, of course, no film should ever be made unless good distribution is assured — preferably through existing channels.

THE INDEPENDENT:

(CONTINUED FROM PAGE 34)

are proud to be *The Independent*. But like any other privately-run business, they have to *sell* their service. They get help from progressive manufacturers, from research labs that developed many telephone innovations *independently*, and they're *regulated*, too, without any guaranty of profit.

Shown by Local Companies

Showings of the film are appropriately in the hands of Independent telephone companies who are being encouraged to acquire individual prints by the Association. Local company credit-titles are carried at the head and end of these prints. Previews to "insiders" (employees, local shareholders, top toll accounts and the press) are usually followed by an "Opera House" at the exchange with subscribers and civic leaders invited.

Following these "premiers" *The Independent* will go into "public" distribution among clubs, organizations and other groups in the company's service area. When these are completed, the prints will wind up in the local school's film library and should do yeoman service in recruiting future employees for the company.

"Must" Viewing in the Capital

We'd like to add a post-script to this distribution plan. *The Independent* is "must" viewing by every member of Congress, Washington rate-making and regulatory bodies and those anti-trusters who keep talking about that *big* Bell System. It isn't any news to Bell that the company has 3,200 ardent competitors and that its Western Electric affiliate has *dozens* of other telephone equipment makers to help it keep on its toes. That they live together with nary a hitch for the telephone user who doesn't know or care whose lines he's talking over is a tribute to our free enterprise system. Neither Bell or any of the "independents" would want it any other way.

* * *

Schlitz Takes Fishing Fans to the Lake District of Chile

To stimulate U. S. sportsmen's interest in the Lake District of Chile, Jos. Schlitz Brewing Company has sponsored a film that introduces the area to fishermen and other sports fans.

Rainbow in the Mirror! describes an expedition of three Tar Heel fishermen to the Chilean lake country, where they are seen with catches of large rainbow and landlocked salmon in remote lakes surrounded by active volcanos.

Other sequences include Pacific fishing villages, and horse-racing and flowers at Vina Del Mar. Chile's President Alessandri is seen overseeing reconstruction after earthquake damage.

Latin music is provided in this 29-minute color film by the Carmen Cuevas singers. Producer was Walter J. Klein Company, Charlotte, N. C.

AND THE FAR SOUND:

(CONTINUED FROM PAGE 35)

Still later, research men found ways of making one wire carry five conversations at once. Today, 1,800 conversations can be carried in a single voice path, through wave guide "pipes" via coaxial cable or by microwave radio. The recently-developed "optical maser" projects a light beam that may one day carry hundreds of thousands of telephone calls and TV programs. Bell Lab scientists are hard at work perfecting this device.

To Launch First Satellite

In 1962, the efforts of Bell research in communications satellites (while Echo 1 still flickers in the twilit skies) are directed toward launching of a commercial satellite (the first at private industry's expense) which will literally "reach for the stars" and begin an entire new era in worldwide exchange of both voice and pictures.

Scenes in *The Far Sound* recall experiments which led to the invention of the transistor and the Bell solar battery. The first television broadcast in 1927 is recreated. In research, the film notes, "man is free to seek what truths he will . . . to delve the boundless depths of his own mind, seek within the molecu unfathomable secrets of

Striking and entertai toon animation helps tel *Sound's* story, to illumina into the science of sour *commercial* film by any dinary definitions, the destined to have broad ing appeal, whether t public audiences or with classes.

THIS IS MICHIGAN'S STORY:

(CONTINUED FROM PAGE TWENTY-EIGHT)

and prosperous in the nation," McElvenny said.

"We hope this film will answer the questions that are on the minds of many of our young people: whether or not they should build their careers in Michigan or look for greener pastures. We hope it will convince Michigan businessmen and their employees that each has a stake in Michigan and that, for those willing to give a little of themselves to help solve its problems, the rewards and future are here," he said.

Points Up Michigan's Historic Rise

The plot of the picture revolves around a family in which the son, about to graduate from high school, tells his parents he doesn't think he wants to go to college in Michigan or live there. He suggests that other states have more to offer.

His father defends the state, recalling how "Michigan has always bounced back," and relates the state's history from the rise and fall of fur trading, through the iron and copper mining and lumbering booms, the growth of agriculture and manufacturing. As he talks about each period, the same son, father and mother appear in costumes of the era and re-enact historic scenes.

Travel 10,000 Miles to Film Scenes

All of the studio and location scenes with the actors were filmed by Jam Handy crews. Scenic pictures were photographed by William Sweet, chief photographer for Michigan Consolidated. The camera crews traveled over 10,000 miles within the state to make *The Michigan Story*.

They went to Mackinac Island to shoot scenes about the fur traders; to the Upper Peninsula for the mining industry; to northern Michigan forests to tell how Michigan became the lumbering center of the nation; to Greenfield village for pictures of the early automobile industry. They visited a half dozen colleges and universities across the state and flew over Detroit for spectacular views of the city's expressways.

Film Available Nationally for Showing

The rejuvenation of Michigan's largest cities with their new buildings, and diversified industries brings the film up to date.

The Michigan Story is available nationally for group showings. The film can be reserved through Michigan Consolidated's public relations department in Detroit or through the sales departments in the utility's outstate offices.

EDITOR'S NOTE: pointing a trend to state promotional use of the film medium, the next issue will feature several new pictures on the Commonwealth of Kentucky.

A TRADE ASSOCIATION USES THE FILM MEDIUM:

(CONTINUED FROM PAGE TWENTY-NINE)

container industry is a billion dollar a year business. Fifty thousand people are employed in its highly mechanized plants and their combined efforts produce the more than twenty-two billion new glass containers used annually in the United States.

Plant production is a complex operation, and if the layman is to understand what is going on he must be given a careful step-by-step explanation. Before any shooting was done in the plant, both the producer and the cameramen were taken on a "walk-through" of a typical plant, and given several information pieces to read which described in detail the modern process for making glass containers. Once these had been absorbed, a shooting script could be completed. The schedule called for five days of in-plant shooting.

Presently, there are one-hundred-and-five glass container plants throughout the country —about one hundred of them are operated by GCMI member companies. One had to be chosen for the film.

Factors Involved in Selecting a Plant

The prototype plant would include the latest equipment and design; enough machines to produce a variety of jars and bottles since we intended to show the many sizes, shapes and designs of glass containers; and a plant that would allow a movie crew to enter and shoot.

This last point presents another problem that is peculiar to an association. Because, as pointed out earlier, all publicity projects must be carried out in the name of the entire industry, it is not possible to give individual companies recognition through plant identification. The name of the plant could not be shown, nor could the type of jars and bottles being produced be identified. The only compensation to the plant is in the knowledge that it is making an industry contribution. Fortunately, GCMI member companies are extremely cooperative in such matters and approval once the plant had been decided upon never posed a problem.

Plant Electrician Is Your Key Man

However, permission to enter does not imply permission to take over the plant. Without the cooperation of the plant personnel it is virtually impossible to get the job done. The rules of safety and discipline set-up by the company for the regular employees must be observed. Perhaps the most important person in the plant to a movie crew is the plant electrician. This is especially true if large areas of the plant are to be shot. He is the man who can make the necessary power available. Without his help and knowledge of the current within a certain plant it is not unknown that movie crews have paralyzed an entire plant because they hooked up to a line that was inadequate.

At a different level, the plant manager is the person who insures smooth performance by instructing his personnel about what the crew is doing, and soliciting their assistance in any way possible. Usually, he will assign a man to act as guide and trouble shooter.

The "ideal" plant for *Sealed In Glass* was found a thousand miles from New York City. It met all the requirements of up-to-date equipment; a high level of housekeeping; enough machines so that a variety of containers could be seen; facilities to permit a movie crew to work without interfering with normal production; and a willingness to have us in the plant.

Well-Planned Shooting Avoids Delays

The plant city was large enough so that we were able to pick-up locally the assistant cameraman, gaffer, and grips, realizing a considerable saving on travel expense for those people. Once shooting began there were no delays. Beginning with the establishing exterior shots of the plant, we followed in order the step-by-step process for making glass containers: arrival of the raw materials (sand, soda ash, and limestone) in freight cars; measuring the materials; mixing the batch; delivery of the

High and well out of workers' paths, camera crew films sequence on glass container manufacture in plant selected as prototype.

mixed raw materials to the furnace; the melting process; molten glass fed to the forming machines; the production of glass containers on the machines; the finished jars and bottles; annealing and the finished product.

By following precisely these basic steps we avoided confusion over what had and had not been shot, and the plant personnel could also follow our progress and prepare in advance for arrival in different sections. Instead of the five day schedule originally planned, all the in-plant shots were finished in four days.

Getting Cooperation from the Packers

After a glass container is made it must be filled with something and then delivered to the consumer. Broadly, the end-uses for glass containers divide four ways: foods, beverages, drugs and cosmetics, and chemicals—household and industrial. GCMI member companies make glass containers but do not pack them. We therefore had to approach packers to ask what we had sought from our members—to enter their plants and shoot the filling lines. The same cooperative spirit pervading within our own membership naturally enough did not exist among those not directly interested in the Institute. Again, there could be no brand identification, and the only incentive for the packer was that a certain product would app film slated for national television and cal distribution.

Eventually seven packers agreed t make the necessary shots. The seven, were scattered from Yonkers, New Long Island City; to Bloomfield, Nev The seven set-ups took four days—th number of days required for the entire photography. Each filling or packing tions plays about ten seconds on the but the time involved to reach the pla mitted us to shoot at the most two plan

Colorful Final Sequence "Lifts" F

With the completion of filming the day productions methods for makir containers, and the filling operations t for *Sealed In Glass* was about finish for the finale. Instead of a purely p approach showing row on row of glass items sitting on a shelf we decided on since been termed the "ballet of the Through the use of special optical le the ingenuous special effects technique cis Thompson there is a kaleidoscope and shape of glass containers as they symetrically before the camera.

When the final answer print was a by GCMI it was presented to repres of member companies attending a sem membership meeting. Their enthusiasti tion of the film at that meeting was mo flying and indicative that we had ful least two of our original objectives. T fillment of the third came when *Sealed* was awarded a special prize for specia in the International Film Festival of Ne and when NBC-TV scheduled the fil Sunday morning telecast in October.

PREVIEW NOTES: SEALED IN

SCREEN HOSTESS Aileen Paul, descr
one major advertiser as "the best woma
mentator I've ever seen anywhere! Sh
lovely, and above all she's **believable.**"

Why "FLAIR FOR LIVING" brings new opportunity to producers:

1. It's a great buy for any client with a product or service aimed at the homemaker market — big television viewership at rock-bottom cost
2. It offers greater producer profits — through planned economy of production and opportunity for multiple jobs
3. Modern is pre-selling for you through space advertising and extensive direct mail
4. Modern offers you an attractive packet of producer's sales aids

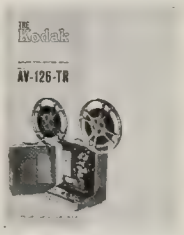
MODERN TALKING PICTURE SERVICE, INC.

1937 Our 25th Year 1962

"We can show prospects MORE with movies than in a live demonstration"

ays L. A. DePolis, Vice President in charge of larketing, LeTourneau-Westinghouse Co.



"We solve two major selling problems with odak Pageant Projectors like this one. One is he problem of showing our equipment, which eighs as much as 38 tons, to as many pros- ects as possible. The other is the problem of aking maximum use of every minute spent ith the prospect.

"For example, surveys show that the average alesman spends only 61 minutes per year with ach identified buying influence. As our earth- oving equipment becomes more and more omplex, it becomes increasingly important to make those minutes count! Instead of our sales- man using his time to bring the prospect to the machine, or spending a lot of money to bring the machine to him, we do the job better with our kit of 11 sales films.

"We had definite reasons for choosing Kodak Pageant Projectors to do these jobs for us. First, we needed a rugged projector—one that wouldn't break down on an executive after he had taken it halfway across the country. We bought Pageant Projectors because we thought they were the most rugged and dependable, yet quiet. We wanted a projector that wouldn't startle a conference group when it was turned on.

"Now that we've been using our Pageant Projectors for a while, we've found three big advantages over any other projector: (1) they're simple and functional in design; (2) easy to set up and use—with minimum instruction; (3) a fast, foolproof rewind system."

Your Kodak Audio-Visual Dealer will demonstrate these and other Kodak Pageant Projector advantages. Or write us for Bulletin V3-65, which describes the new Kodak Pageant AV-126-TR, with its all-transistorized amplifier for instant sound start-up and maintenance-free sound system.

WILDING INC.

—for all your sales promotion needs!

Our young, energetic writers are eager to tackle your sales promotion projects: motion pictures, slidefilms, graphics, meetings or live shows.

Our Live Show Department can always be counted on to come up with fresh, original presentations that will leave your audience clamoring for more.

Top-quality motion pictures, our specialty, are turned out by our team of talented directors—who have clever, persuasive methods of coaxing a top performance from an actor.

All of our employees—even our secretaries—are willing to go out of their way to serve the client.

Backing up the directors are our eleven aggressive camera crews, with the latest, up-to-date equipment.

And finally, our prices, as presented by the account executives, are designed to convince you to give Wilding the business.

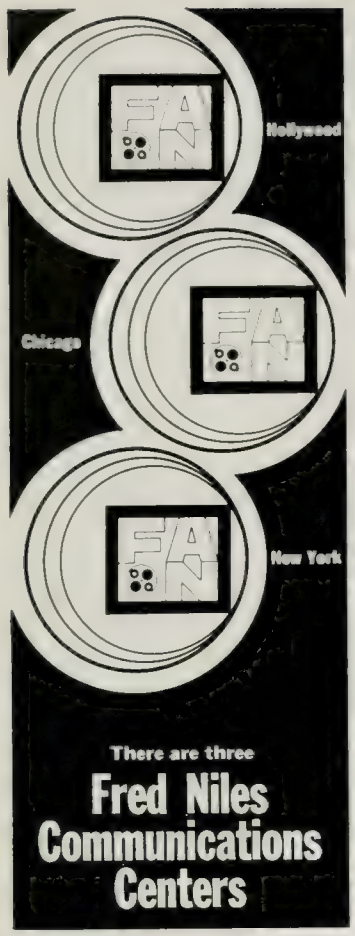
A Foreword to this 12th Review

THE LIGHT of a New Age has burst full upon an unprepared Earth. Though manmade clouds hover over vast stretches where millions of people still exist in shadow, the path to the Moon and beyond awaits our space ships.

Nuclear-powered craft explore the depths beneath a Pole, sail the oceans' surfaces. Science and medicine have worked life-extending miracles; automation performs tedious tasks to unlock technological riches for Everyman.

Transmission of both images and sound between nations is imminent. Satellite-aided signals offer enlightenment and understanding far beyond the escapism concept to which we have limited television's great potential.

What an age in which to live . . . to be a doer, thinker or a leader of men! Like every other era of change, the New Age has also brought with it a multitude of challenges which the pessimist calls "problems." The greatest of the challenges is in the realm of Education . . . for, today, as never before . . . man's future depends on understanding.



This 12th Annual Production Review reflects the talents, creative genius, physical resources and experience which these listed thousands of sight/sound "missiles" represent in terms of films made for industry, governments, trade groups, and organizations. We direct our corporate and government subscribers to client references which are unique in this Buyer's Guide. Your challenge is to see the listed films which are applicable to your own needs!

These pages (beginning on 105) list, in great detail, the key people, physical facilities and recent experience within 372 specializing film and tape production companies in 18 countries on all the continents around the world.

Each of the films made by these listed companies was a **specific** answer to a **special need.** It is these **specifics** and the **results** achieved in each situation which the reader must consider paramount! For example: one company's use of a simple training film for showing to thousands of cleaning personnel in its buildings across the country. An improved skill and better use of tools was translated into saving of thousands of man-hours on these jobs.

Lives saved through visualized safety education, through medical and health pictures . . . lives enriched through films preparing people for Retirement Years . . . understanding made possible through "attitude" films . . . new skills taught to men and women otherwise wasted . . . taught faster, with easier-to-grasp, **proven** audio-visual techniques . . . these are potentials offered by listed companies!

A thoughtful Maker has provided the medium of film for a world of change which has dire need for understanding. The light on the screen can help liberate mankind from fear through ignorance. —OHC

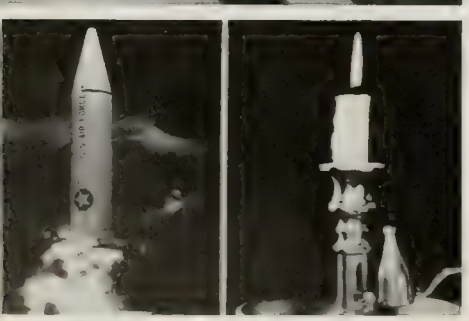
Affiliated with MECCA FILM LABORATORIES CORP., 630 Ninth Avenue, New York 36, N.Y.

"A child reaches out and the helping hand of the Greater New York Fund answers . . ." a poignant moment of child desertion narrated in this effective fund raising film for the Greater New York Fund.



Demonstrating new medical approaches to physical therapy, "The Return" was filmed for the American Physical Therapy Assn. A New York Times review said: "Perceptively written . . . real power!"

The Ford Motor Company sponsored "Where Were You" in the public interest to get more Americans out to vote. Between August 1 and November 8, 1960 a record was set by 11 million Americans who saw the film distributed by Ford.

MPO crews travelled 25,000 miles to get pictures for Gulf's "Unseen Journey" . . . into the desert by helicopter, by paddle boat up the Louisiana bayous. The New York Times says: "a pounding, graphic and splendidly photographed documentary."

Produced for the National Board of Fire Underwriters, "Science of Fire" tells the dramatic story of fire. Film News calls it "as absorbing to watch as it is enlightening . . . excellently researched . . . wide audience appeal."

it's the picture that counts...

■ At MPO we make motion pictures that have qualit built into them. We maintain the largest permanen staff of professional filmmakers in the non-theatrica film business. For over fifteen years we have pro duced public relations, sales and training films fo America's leading organizations and businesses Effective motion pictures, pictures that count! I you'd like to see one of our productions or learn more about our facilities and staff, call Judd Polloch at TR 3-7000 in New York.

here's how you can double the value of your business films.

■ Double the use of your business films and you double their value. Simple? It's even simpler to use the Videotronic 8, MPO's new, automatic 8mm sound projector. You and your staff will really use this motion picture projector — and your films! You'll find it easy-to-operate, easy-to-carry, easy-to-watch, easy-to-maintain, easy-to-own. It's the lowest priced repeater on the market. Or, if you wish, lease-use available on low-budget monthly rentals. And rentals may be applied against purchase price. MPO can also convert your 16mm or 35mm films to 8mm, or produce a new, low cost film for your Videotronic 8.

lew, Thin-Base Kodak Film Used in Glenn Orbit Flight

☆ A new thin-base Kodak film was used in the pilot-observer camera of the Colonel John Glenn orbital flight, A. C. Thomsen, manager of Eastman Kodak Company's photo recording methods sales, reports.

The new, thin-base, high-speed color film enabled 590 feet to be loaded on a normal 400-foot spool to record Glenn's reactions. This is Kodak's Ektachrome ER, .0025-inch Estar base, 16mm. With an ASA exposure index of 160, the film can be used under low light levels, or in high-speed cameras, Thomsen said. It was designed originally for general scientific and technical use.

A newly designed camera took pictures on the new film at a high rate of speed during takeoff and landing and more slowly during the time of orbit, a total of 480 feet.

The film, which is a little thicker than the wrapper on a cigarette pack, was flown by courier to Kodak in Rochester for processing.

MPA's Chicago Man Wins 1961 Sales Contest Award

☆ Fred E. Magel, Resident Assistant Vice President in the Chicago office of the Motion Picture Advertising Service Co., New Orleans-based national theater screen advertising company, won his company's "Topper Award" for outstanding 1961 sales achievement.

Awards, which included a $100 Savings Bond and a $1,000 sales bonus, were presented at the company's annual sales convention held in New Orleans in January.

Extensive Film Coverage Brings Orbital Flight Story to World

THROUGH THE MAGIC of camera eyes, through film and recorded voice, lands around the world are eye-witnessing the achievements of Lt. Col. John Glenn on his orbital flight.

Three times the U.S. Marine piloted the Mercury spaceship around the earth, bringing it down to a near-pinpoint landing in the Atlantic Ocean. It was the first orbital flight by an American. For many months, the entire world waited for this epic flight. Now countries around the world are seeing it on film, in detail.

Given Top-Billing Overseas

America's first manned orbital space flight received the most extensive on-the-scene Voice of America coverage ever given a single event and was given top billing overseas through all other U. S. Information Agency services.

USIA pooled all its resources — the Voice of America, television, motion pictures, press, exhibits and book programs — into a highly-geared, coordinated effort to tell the world of Astronaut Glenn's flight.

Ship First Prints in 36 Hours

The audio-visual follow-up promptly and with expert handling, spread the word around the world on film within hours.

USIA's motion picture service produced a one-reel film of the orbital flight in 41 languages, and within 36 hours airshipped prints in both 16mm and 35mm to 107 countries, including those behind the Iron Curtain.

Four Other Background Films

In addition, newsreel clips were sent to 57 countries, and Spanish-language versions were sent to 12 countries. The motion picture coverage included Lt. Col. Glenn inside the Mercury capsule during the flight.

USIA's television service produced a number of programs as background material for the orbital flight. These were used overseas in connection with the flight.

Focus: Infinity was a 13-minute feature describing the importance of the flight and focusing attention on the fact that the American space shot was made "with the entire world watching."

Other background programs included:

Manned Orbit, five minutes of newsreel type footage used by local stations overseas in reporting the actual flight.

Mercury Backup, 10 minutes of background footage on Project Mercury, featuring world-wide international tracking stations.

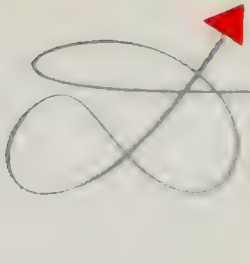
Glenn Interview, five-minute interview with Astronaut Glenn deals with views on space . . .

Architects of Space, 15-minute program reporting on the development of the Atlas rocket used as the booster for Project Mercury.

With speed and precision, through the technology of camera and film, Astronaut Glenn's thrilling orbital achievement was shared

with the entire world — in countries far and near. For months and years to come, the film record of this great space feat will be telling the world that when America did it "the entire world was invited to watch."

* * *



A F Telefilms to Distribute NASA's "Mastery of Space"

☆ The National Aeronautics and Space Administration is offering *Mastery of Space*, a 58-minute film in color, documenting the Project Mercury man-in-space program and Lieutenant-Colonel John Glenn's orbital flight to television stations and networks through Association Telefilms' national film centers. Soon, 16mm prints of the film will be released to schools and community organizations.

The film highlights America's first orbital flight, traces the development of the manned-space program, describes the techniques of launching and orbiting, and explains the purposes behind the nation's space probes. The final sequences of the film show the "Friendship 7" countdown, launch, ascent, tracking procedures and capsule recovery. There are also scenes inside the capsule showing Col. Glenn in orbit-to-earth conversations and manning the spacecraft.

Astronaut John H. Glenn, Jr. (center) at NASA press conference, flanked by Astronaut Donald Slayton, scheduled for next shot (left) and Public Information Officer John Powers, "voice" of the Astronauts (seated on the right).

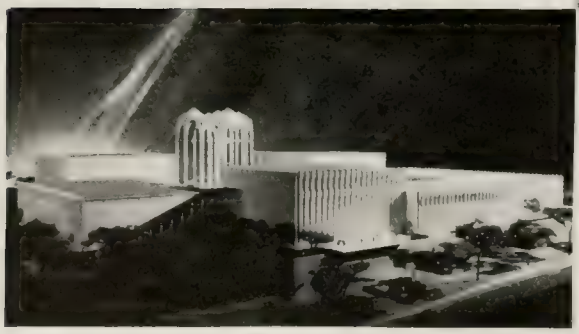
THROUGHOUT THE WORLD
REEVESOUND

creates specialized motion picture systems to meet the most specialized needs!



From Seattle to Pakistan, on the ground or in the air, wherever the problem, whatever the need, Reevesound invariably comes up with the perfect answer. No job's too tough, no project inconceivable. And Reevesound does it all! Design, layout, manufacture, building, installation, operation—Reevesound specialists take every phase in tow to create a system tailored for your needs. Here are some Reevesound installations now making news throughout the world!

Motion Pictures while you fly!
Jet airliners will show full length features while in flight . . . thanks to Reevesound. This advanced system incorporates special screens and equipment with crucial safety devices that meet highest airline and Government standards. An aeronautic first . . . another Reevesound success, engineered for Inflight Motion Pictures, Inc.

Pakistan gets a studio!
A motion picture production center for the government of Pakistan! Reevesound planned and provided the complete design, equipment, technical facilities—and installed them. In addition, Reevesound supplied personnel and training to get the studio on its feet!

Breaking the presentation barrier!
The Federal Science Pavilion at the Century 21 Exposition in Seattle will feature a revolutionary multiple image projection system (seven projectors are employed). Designed especially by Reevesound for the U.S. Department of Commerce. The system will show a highly imaginative film presentation created by famed designers Charles and Ray Eames who worked closely with Reevesound engineers.

Other recent Reevesound systems included the U.S. Exposition, Moscow 1959; Latin American Atomic Energy Exhibition, 1960. If you need a special motion picture system, but think it can't be done—call Reevesound.

REEVESOUND Company, Inc. ▪ 35-54 36th Street, Long Island City 6, N.Y. ▪ A subsidiary of Reeves Soundcraft Corp.

A Preview of the Visual Exhibit Techniques at

THE SEATTLE WORLD'S FAIR

SPECIAL BUSINESS SCREEN PRE-OPENING FILM SURVEY

A World's Fair — any World's Fair — means big promotional and display budgets.

Inevitably, large portions of the materials which countries or companies want to feature at fairs are too big or too intangible to be shown physically. So, when you have a World's Fair, it follows logically that you are going to have new developments, new technologies and new techniques in motion pictures. You can look for breakthroughs in both production and exhibition equipment and methods.

The Seattle World's Fair, which runs from April 21 through October 21, 1962, is a prime case in point:

Films to Take Visitors on World Tour

☆ Visitors (an estimated 10 million of them) will be introduced to scenes, people and activities all over the world via the medium of motion picture film.

☆ People will preview their futures — and the futures of their children and grandchildren — via motion pictures. The theme of the Seattle Fair is to depict life and times of Century 21. Since this hasn't happened yet, it stands to reason that participants will be making highly creative uses of movies.

☆ Science and space exploration are keynotes of our expectations in Century 21. Their stories will be told via some of the most creative motion pictures to be evolved in recent years.

U. S. Government a Patron of Film Arts

In a preliminary survey of motion picture activity connected with the Seattle World's Fair which was conducted especially for Business Screen, the United States Government emerges as the prime patron of motion picture arts. Several commercial exhibitors are also counting on movies to tell their stories. At this writing, it is too early to know specifics about the extensive exhibits planned by foreign governments. There is a good reason to believe, however, that several of the 35 nations participating in the fair will use movies prominently in their pavilions.

The United States entry in the Fair, supervised by the Department of Commerce, is devoted to the history, the role, the significance and the future of Science. Congress has appropriated $9 million for this pavilion, to be known as the United States Science Exhibit. In addition, many private corporations are underwriting substantial portions of USSE or staging special presentations which will be part of the comprehensive presentation.

Science Exhibit Features Five "Worlds"

In concept, USSE is one of the five basic segments or "Worlds of Century 21." These are:

☆ The World of Science. USSE will occupy six acres of the total 74 acre site of the Fair.

☆ The World of Century 21. Exhibits of 35 governments will be featured.

☆ The World of Commerce and Industry. Commercial exhibits by firms from all over the world will occupy 23 acres.

☆ The World of Art. The great art collections of the world will be represented by loaned displays.

☆ The World of Entertainment. An integrated area has been set up for the performing arts: sports, recreation, amusements, theatre, music and restaurants. Motion pictures will also play a major role here.

Within USSE, there will be seven distinct display or exhibit areas. Of these seven, three will be devoted chiefly to motion pictures. Of the remaining four, three will make extensive use of films.

Traffic through USSE, which is expected to total a little better than 5 million (or half of the total attendance at the Fair) during the six-month operating period, will travel in an organized flow. Spectators will move from one area to the next, observing or experiencing the events in a planned sequence. The visitors' opening contact with USSE will be in a movie theater which dominates AREA I of the pavilion.

The area, and the show it presents, will be known as the House of Science. The title is both figurative and literal. In this area, USSE will present a basic concept of what science is and how it was evolved. The accent will be on breadth.

A special effort will be made to show that science involves more than electronics, space,

A vista of modern design is pictured in this advance model of the Seattle World's Fair grounds.

Visual Exhibit Techniques at the Seattle World's Fair:

(CONTINUED FROM PRECEDING PAGE ELEVEN)

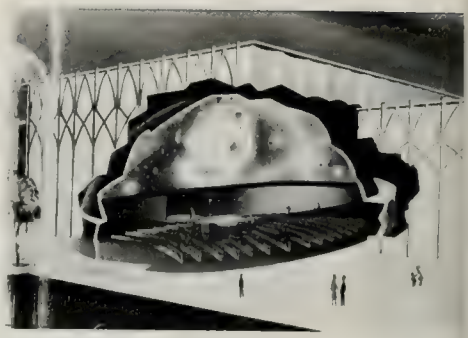
and destruction. The beauty, depth and fascination of many branches of science will be shown.

The vehicle for accomplishing this will be a motion picture produced for the occasion by the Charles Eames design organization, Venice, Calif. The show will use a multi-screen technique to depict a cross-section of American life.

Synchronous Projection on Six Screens

Within the Area I House of Science, a series of six screen areas will be incorporated into the sloping wall of the theater. For scope of coverage, six separate aspects of the individual subject under discussion in the film will be covered through synchronous projection on the individual 9′ x 16′ screen areas, which will actually be part of a 50-foot-wide projection surface incorporated in one of the walls of the theater. A seventh screen, used for transition sequences in the Eames exhibition, will cover an area of 17′ x 21′. This will be centrally located on the projection wall.

Science As "Outgrowth of Civilization"



The Eames show will run for 12 to 13 minutes. The opening portion — four to four-and-a-half minutes — will be animated. The remainder will be live film — most of it shot especially for this show by Eames' head cameraman, Archer Goodwin.

The animated sequence will use the theme from which the "House of Science" show takes its name. Science will be shown as an outgrowth of civilization. The beginnings of scientific thought will be traced to ancient Greece. The first "House" is a crude shed which barely protects its adherents from the elements of ignorance and fear which have always surrounded scientific progress. Then, through the ages, as new scientific pursuits are added, additions are tacked onto the "House of Science." Through the years, the styles of architectures of the additions to the "House" change with the period and with the part of the world in which the sponsoring innovations take place.

In addition to illustrating the evolution and breadth of scientific interest, this technique also makes it possible to show the acceleration of scientific development in modern times. The animated sequence will trace some 3,000 years of scientific evolution, showing that more than 90 per cent of significant developments have taken place during the past hundred years.

Below: the Forest Products' Building at the Fair will feature a motion picture on the values of wood products to man.

Above: film re-creates outer space, surrounding viewers, in the Spacearium exhibit sponsored at Seattle by the Boeing Company.

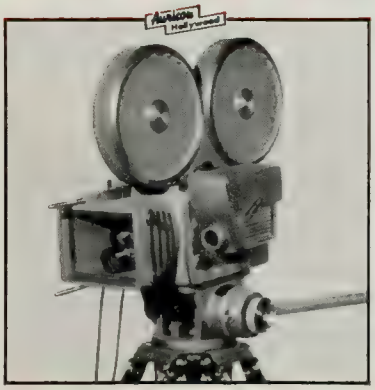
Today's Scientists Shown Via Film Clips

The live-film sequences will take over where the animation stops, illustrating the practice of science today. Science will be illustrated as taking in much more than the glamour elements of missiles and space exploration. The underlying theme will be to show science as man's quest for knowledge. One sequence of the films will show action clips of some of the world's great living scientists, illustrating that they are old and young, male and female, tall and short, white-skinned and black.

The multi-screen technique will make it possible to survey an entire scientific discipline in a matter of seconds. For example, one sequence will deal with science as a means of extending man's senses. Different screens will illustrate the uses of magnifying glasses, optical microscopes, telescopes, electron microscopes, and so on. The total effect will be to show science as the quest for knowledge of nature.

Preparing the Visitor for Exhibit Tour

The show will be introductory in its theme, preparing visitors for two-hour, step-by-step tour of the USSE. In effect, this motion picture exhibition will serve as "sort of an intellectual decompression chamber," according to one USSE official. People coming into the science exhibits will be fresh from an amusement midway, commercial exhibits and other events of conflicting stimulation. The Eames movie, then, will be intended to set the mood of an interest in science. Visitors will assemble there in groups, moving on as the show is completed. As new visitors file in, their attention will be focused on the screen areas through the projection of colored light patterns.



Because of the need for vivid definition to keep pace with the rapid-fire presentation techniques of the Eames show, full-frame, 35mm projection will be used. All original film, both animation and live, is being shot on Eastman Color Negative, Type 5250. Release prints are on Eastman Color Print Film, Type 5283. The only exception will be a sequence of approximately 30 seconds on political sci-

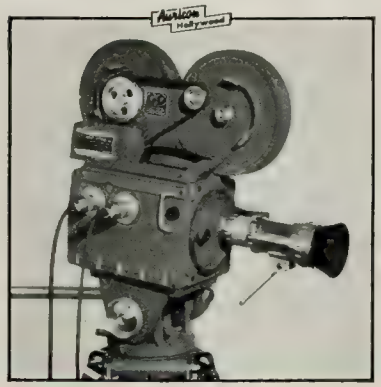
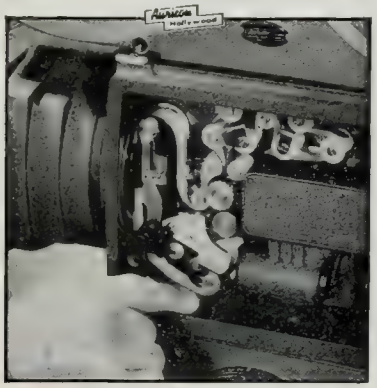
AURICON 16mm Sound-On-Film for Professional Results!

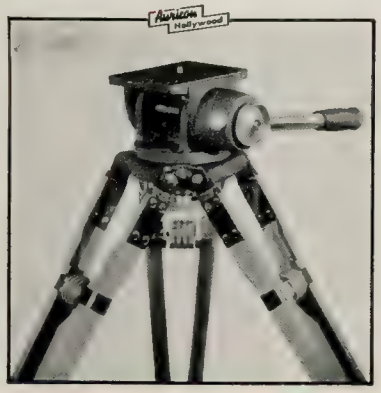


"CINE-VOICE II" 16mm Optical Sound-On-Film Camera. ★ 100 ft. film capacity for 2¾ minutes of recording; 6-Volt DC Convertor or 115-Volt AC operation. ★ $967.00 (and up).

"AURICON PRO-600" 16mm Optical Sound-On-Film Camera. ★ 600 ft. film capacity for 16½ minutes of recording. ★ $1871.00 (and up) with 30 day money-back guarantee.



"SUPER 1200" 16 mm Optical Sound-On-Film Camera. ★ 1200 ft. film capacity for 33 minutes of recording. ★ $5667.00 (and up) complete for "High-Fidelity" Talking Pictures.



"PRO-600 SPECIAL" 16mm Light-Weight Camera. ★ 400 ft. film capacity for 11 minutes of recording. ★ $1,295.00 (and up).

PORTABLE POWER SUPPLY UNIT — Model PS-21... Silent in operation, furnishes 115-Volt AC power to drive "Single System" or "Double System" Auricon Equipment from 12 Volt Storage Battery, for remote "location" filming. ★ $269.50

FILMAGNETIC — Finger points to Magnetic pre-stripe on unexposed film for recording lip-synchronized magnetic sound with your picture. Can be used with all Auricon Cameras. ★ $960.00 (and up).

TRIPOD — Models FT-10 and FT-10S12... Pan-Tilt Head Professional Tripod for velvet-smooth action. Perfectly counter-balanced to prevent Camera "dumping." ★ $406.25 (and up).

Strictly for Profit

CHOOSE AURICON

If it's profit you're after in the production of 16 mm Sound-On Film Talking Pictures, Auricon Cameras provide ideal working tools for shooting profitable Television Newsreels, film commercials, inserts, and local candid-camera programming. Now you can get Lip-Synchronized Optical or Magnetic Sound WITH your picture using Auricon 16 mm Sound-On-Film Cameras. Precision designed and built to "take it."

Strictly for Profit—Choose Auricon!

MANUFACTURERS OF PROFESSIONAL 16MM CAMERAS SINCE 1931

Nalley's, Inc. building will feature a film on the food industry; life in the Northwest.

Visual Exhibit Techniques at the Seattle World's Fair:

(CONTINUED FROM PRECEDING PAGE TWELVE)

ence. These scenes will be taken from black-and-white newsreel sequences of historic events.

Area II is one of three sections of USSE which will house "walk through" exhibits. The theme of this particular area will pick up where the Eames movie leaves off, covering a history of scientific development and presentations on scientific phenomena. Particular stress will be placed on the fact that man's own senses are frequently unreliable in observing natural phenomena. One area, for example, will demonstrate the Doppler Effect, showing how light and sound waves are distorted in observations of rapidly-moving bodies.

The overall theme of AREA II will be to trace the history of scientific development. One of the important exhibits will be a motion picture illustrating the "Birth of a Volcano." This film will be one of 30 to 40 shown continuously on rear projection screens in three of USSE exhibit areas. These presentations utilize both 16mm and 8mm films — both sound and silent. All use closed-loop, continuous magazines to tell a never-ending story of the development, methods and future of science.

Provide "New Dimension in Flexibility"

In their aggregate, this collection of rear-view motion picture showings represent an important new concept on their own. In the museum-like setting in which they will be used, these films perform a flexible and important education function.

For one thing, there is a new dimension of flexibility. This collection of motion picture exhibits probably does more than any other single facility ever created to dispel the association of motion pictures with darkened room and trapped, fidgeting audiences. Movies at the USSE will be a living medium selected because they can best convey a lot of information in a limited amount of time and do it more faithfully than techniques which are less animate. At USSE, there will be movies in bright galleries, in hallways, overhead, at eye level or anyplace else where they carry out the design and presentation themes.

Covering More Ground at Less Expense

Another apparent advantage is that with film, USSE planners will be able to cover more ground at smaller expense and with greater impact. In a conventional museum presentation, visitors read their way through the exhibits. At USSE, there is too much to be said in a minimum of time. Much of this information is to be imparted to children, who will be the real VIPs among the visitors to this government-sponsored exhibit. With movies the USSE can deliver its messages at virtually every exhibit sector under a sure, scheduled program.

By using movies as a front line presentation technique, USSE also assured itself of the pick of dramatic presentation materials. Universities, foundations and production studios all over the country have been combed to collect the most vivid, colorful and authentic collection of scientific information ever presented in any single event. Literally, this imaginative use of motion pictures will enable USSE to provide a capsule-size scientific education in a few hours.

Spacearium Exhibit the "Glamour Baby"

Considering the prominence of movies in USSE, it seems only fitting for the exhibit to have a "glamour baby" among its motion picture presentations. The unqualified nominee for this spot is the Spacearium, featuring the broadest dimension ever imparted to a motion picture exhibition.

This portion of USSE is being co-sponsored and underwritten by the Boeing Company which makes its corporate headquarters right in Seattle. The theme of the Spacearium is a simulated space flight covering our group c

CandM

TRAVEL FILMS ARE BETTER!

For fifteen years, we've been turning out notable travel films...films that have won awards...films that have been highly publicized...and, most of all, films that move audiences to buy.

Why are CandM travel films better? Because we know the travel business inside out...because we refuse to compromise with quality ...and because we never forget the importance of the sponsor's selling message.

Make us prove it! Ask us to send you viewing prints of films we've made for such airlines as UNITED, DELTA or HAWAIIAN; for hotel operators like ISLAND HOLIDAYS or YOSEMITE PARK & CURRY CO.; or travel promotion agencies like HAWAII VISITORS BUREAU. See for yourself why CandM travel films are different...and BETTER.

THE FARM FILM FOUNDATION:

Oats Company), Orville F. Walker (National Assn. of County Agr. Agents), Francis Wilcox (Sunkist Growers, Inc.), P. O. Wilson (National Live Stock Prod. Assn.).

BOARD OF CONSULTANTS: Roy Battles (Clear Channel Broadcasting Service), E. G. Cherbonnier (Foundation for American Agriculture), Don Donnelly (American Farm Bureau Federation), Barton Emanuel (Author), Creston Foster (American Farm Bureau Federation), C. M. Hall (National Grange Monthly), Kit H. Haynes (National Council of Farmer Cooperatives), J. Don Parel (Association of American Railroads), Lloyd Partain (Curtis Publishing Co.), Val Sherman (National Milk Producers Federation), Carroll Streeter (Farm Journal), C. Maurice Wieting (Ohio Farm Bureau Federation), Louis H. Wilson (National Plant Food Institute), Judd Wyatt (Missouri Farmers' Association).

MEETINGS: The Trustees meet each year in June. The Board of Consultants meet to screen films on call of the Executive Vice President. PURPOSE: The creation of better understanding between rural and urban America through audio-visual education.

ACTIVITIES: (1) Distributes through its main office and cooperating depositories 16mm motion pictures found suitable by Board of Consultants for Foundation endorsement. Distribution is principally to rural America. There is no cost to film users except for return postage. There is, however, a small library of special purpose rental films maintained at the main office. (2) The Foundation, through its contacts with all phases of rural America, makes available a unique consultation service to film sponsors and producers.

THE INDUSTRIAL AUDIO-VISUAL ASSOCIATION

OFFICE (of the Secretary): Harold W. Daffer, Minneapolis-Honeywell Regulator Co., 2753 4th Avenue South, Minneapolis 8, Minnesota.

OFFICERS: Kenneth E. Penney (Minnesota Mining & Mfg. Co.), *president;* Willis H. Public Relations Pictures by Audio...

Corporate image is corporate action. It is motion, on the go or in reverse, because every business is going and growing or it is going to be no business in the long run. Public relations motion pictures present a corporate image doing something worthy, progressive, pro-consumer-ish or just plain good neighborly. Public relations motion pictures mirror a company's good notions and forward motions.

PROFESSIONAL FILM USER GROUPS

THE NATIONAL COMMITTEE ON FILMS FOR SAFETY

OFFICE (of the Secretary): 425 North Michigan Ave., Chicago 11, Ill.

OFFICERS: Henry G. Lamb (American Standards Association), *chairman;* William Englander (National Safety Council), *secretary.*

MEMBER ORGANIZATIONS: American Association of Motor Vehicle Administrators, American Automobile Association, American Public Health Association, American National Red Cross, American Society of Safety Engineers, American Standards Association, Association of Casualty & Surety Companies, Association of Safety Council Executives, Automotive Safety Foundation, Council on Industrial Health of the American Medical Association, Insurance Institute for Highway Safety, Auto Industries Highway Safety Committee, International Association of Chiefs of Police, National Association of Manufacturers, National Association of Automotive Mutual Insurance Companies, National Association of Mutual Casualty Companies, National Fire Protection Association, National Safety Council, U.S. Junior Chamber of Commerce, U. S. Air Force, U.S. Army, U.S. Navy, U.S. Bureau of Public Roads.

PURPOSE: A co-sponsored group of national organizations, with active interest in accident prevention through use of films, who wish to accomplish the following objectives: 1. To stimulate production and use of safety films. 2. To raise the quality of films produced. 3. To establish film evaluation standards. 4. To recognize film excellence in awards program.

1962 ACTIVITIES: April meeting of the Committee as a Board of Judges to screen and finally judge entries in their 19th Annual Safety Film Awards Program. October evening showing of top winning films and presentation of awards to representatives of sponsors and/or producers (during the National Safety Congress and Exposition in Chicago, Ill.).

THE NATIONAL VISUAL PRESENTATION ASSOCIATION, INC.

FOR INFORMATION: National Visual Presentation Ass'n., Inc. 19 West 44th Street, New York 36, N.Y.

OFFICERS: William J. Connelly, *president;* Harry Prichett, *vice-president, (trade)*; Bernard A. Barnett, *vice-president, (user)*; Charles Behymer, *treasurer;* Emma Treadwell, *secretary;* Miss Minnie E. Schack, *assistant to* the President in charge at headquarters.

BOARD OF DIRECTORS: Bernard A. Barnett; Robert S. Bartlett; Norman L. Bebell; Charles Behymer; Mervin R. Bossler; Wiliiam J. Connelly; Charles Corn; Rodd Exelbert; Porter Henry; William F. Herrick; Ray Landis; Edwin Liman; Horace W. McKenna; Stanley S. Merrell; Harry Prichett; Selwin Robbins; Herbert C. Rosenthal; Emma Treadwell; William W. Weltman; Robert Yung; ex officio; Leonard Rogers; Minnie E. Schack.

COMMITTEE CHAIRMAN: Stanley S. Merrill, *Chapter Activities;* Bernard A. Barnett, *Day of Visual;* Robert Yung, *Education Liason;* Emma Treadwell, *Hospitality;* Charles Corn, *Membership;* Horace W. McKenna, *New Activities;* Robert S. Bartlett, *News Letter;* Porter Henry, *Program;* William W. Weltman, *Publicity;* Rodd Exelbert, *Shows & Exhibit Coordinating.*

PURPOSE: To advance and encourage the more effective use of visuals to promote better communication in industry, business, education and government. To increase the prestige of the visual communications specialist by adherence to the highest ethical standards.

ANNUAL AWARDS COMPETITION: Deadline for awards entries for the Best Visuals of 1961, April 16th, 1962. The awards will be announced and presented at the Day of Visual Banquet, June 4th, 1962 at the Roosevelt Hotel, New York City.

MEETINGS: Monthly luncheon meetings, second Thursday, September through June, at the Overseas Press Club, 54 West 40th Street, New York; visitors welcome. The "Day of Visual" Seminars will be held June 4th-5th, 1962, at the Hotel Roosevelt, New York City.

National Organizations in the Educational Field

AUDIO-VISUAL COUNCIL ON PUBLIC INFORMATION

OFFICE: 1201 Spring Street, Fairfax Virginia.
OFFICERS: Robert Hinz (Concordia Films), *chairman;* Murray Severance (Southern Baptist Convention), *vice-chairman;* George Myles (Bell & Howell), *secretary;* Alva I. Cox, Jr., (Nat'l Council of the Churches of Christ in the U.S.A.), *treasurer.*

PURPOSE: A joint industry-church committee concerned with the improvement of Religious Education through wider and better use of audio-visual materials and methods. It aims to inform constituencies of religious bodies on the significances and advantages of audio-visual materials, through publications, magazine articles and slidesets. A major publication of AVCOPI is *Has It Made Any Difference?*, available from the Council office.

THE CANADIAN FILM INSTITUTE

NATIONAL OFFICE: 1762 Carling Avenue, Ottawa 3, Ontario, Canada. Branch Office at College Jean de Brebeuf, 3200 Chemin Ste Catherine, Montreal 26, Quebec.

OFFICERS: His Excellency Major-General Georges P. Vanier, DSO, MC, CD, Governor-General of Canada, *honorary president;* James A. Cowan, *president;* A. L. Hepworth, *vice-president;* G. Delisle, *vice-president;* L. F. MacRae, *honorary treasurer;* Charles Topshee, *executive director;* A. R. Little, *assistant executive director.*

DIVISIONS: Canadian Federation of Film Societies, Scientific Film Division, Business Film Service.

PUPOSE: To bring together Canada's educational, scientific, cultural and community interest in the field of documentary films and to encourage and promote the study, appreciation and use of motion pictures and television as educational and cultural factors.

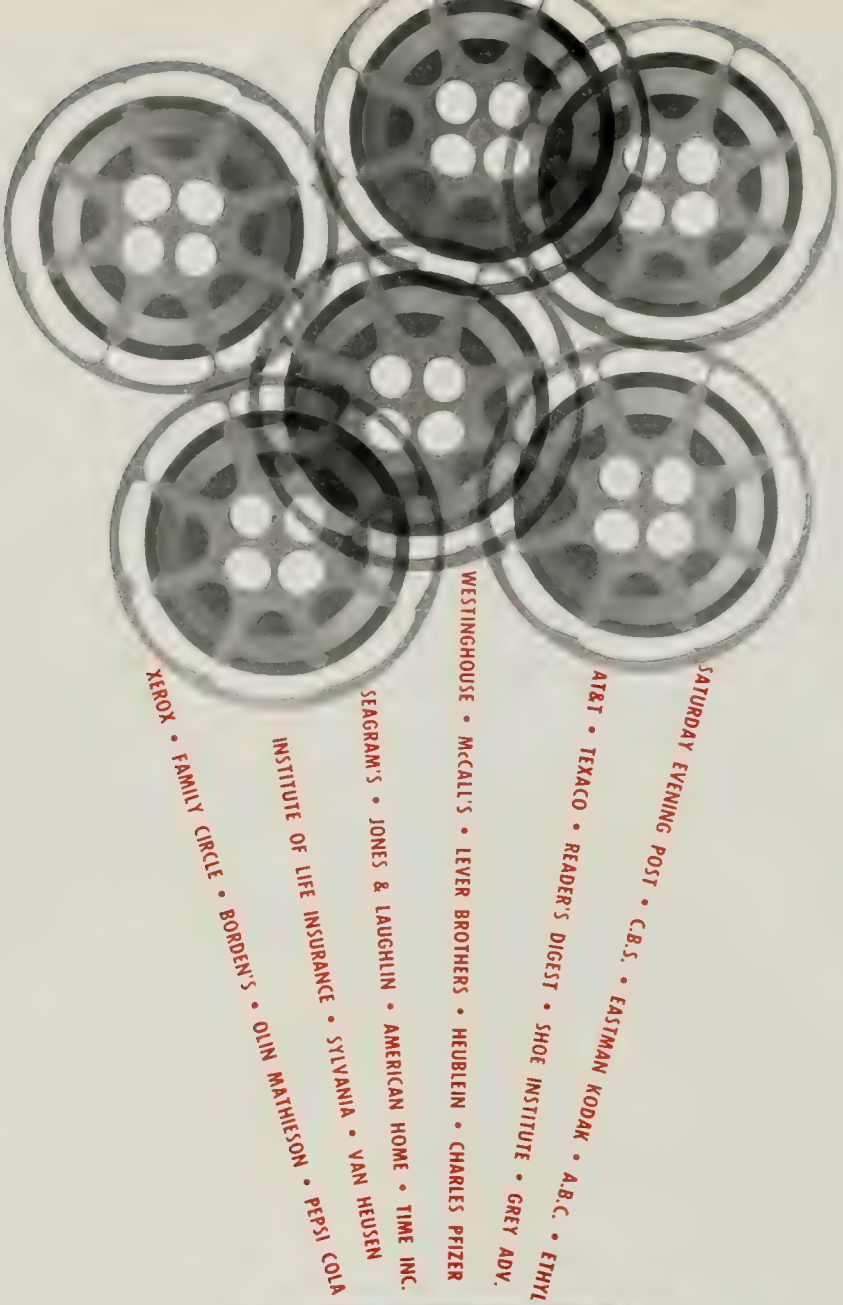
ACTIVITIES: Distribution of the films in the National Film Library (7,000 titles in 24 special collections), Importation of films from other countries, Information Service, Preservation of films of historical interest, Distribution of sponsored films, Canadian Film Awards, Children's film programming, Special services in the fields of business films, scientific films, films on art, films for UNESCO'S East-West project, medical films, etc.

PUBLICATIONS: Monthly Bulletin, Catalogues, Special Subject Listings of Films, Evaluations, Handbook for Film Societies, Information Sheets on selected entertainment films C.F.F.S. Bulletin.

COMMITTEES: Canadian Film Awards, Canadian Film Archives, Films in Adult Education, Labour Films, Canadian Centre of Films for Children.

CATHOLIC AUDIO-VISUAL EDUCATORS ASSOCIATION

ADDRESS: Box 618, Church Street P.O., New York 7, N.Y.
OFFICERS: Rt. Rev. Monsignor Leo McCormick, Ph.D., *president;* Reverend Michael Mullen, C.M., vice-president; Reverend Joseph Coyne, O.S.A., *treasurer.*



PURPOSE: To further the use of Audio-Visual equipment and materials in Catholic education and to encourage production of suitable films for Catholic school use.

ANNUAL CONVENTION: CAVE is coordinating its eleventh Annual Convention with the National Catholic Educational Association national convention April 24-27, in Detroit, Michigan. Audio-Visual equipment and materials may be exhibited at this joint convention. No registration fees are required.

DEPARTMENT OF AUDIO-VISUAL INSTRUCTION OF THE NATIONAL EDUCATION ASSOCIATION

Williams (Director of Audio-Visual Instruction, University of Kansas City, Kansas City, Missouri), *vice-president;* Ernest Tiemann (Director, Visual Instruction Bureau, University of Texas, Austin), *past president.*

COMMITTEES: More than 40 DAVI committees are organized into five divisions. These divisions are: Division of School and College Groups (William Allen, coordinator); Division of Professional Specialization (Richard B. Lewis, *coordinator*); Division of Operational Committees (A. J. Foy Cross, *coordinator*); Division of Professional Development (W. R. Fulton, *coordinator*); Division of Professional Liaison (Charles F. Schuller, *coordinator*); Newly formed committees are: Teaching Machines and Programmed Learning, (P. Kenneth Komoski, *chairman*); Film Libraries, (Robert Cox, *chairman*); Motion Pictures, (Ed McCoy, *chairman*); Graphics, (Jerrold Kemp, *chairman*); Industrial Training, Affiliate Relations; (Clyde K. Miller, *chairman*); Definition and Terminology, (Donald P. Ely); Professional AV Standards and Ethics.

PURPOSE: The improvement of instruction through the better and wider use of audio-visual equipment, materials and techniques. The membership consists primarily of directors and specialists in audio-visual in colleges and universities, state departments of education, and country and city school systems. School supervisors and administrators, classroom teachers, librarians, and audio-visual specialists in the armed forces, in industry, and among religious groups are included in the membership.

ACTIVITIES: IN 1962: National Convention, March 25-30, Municipal Auditorium, Kansas City, Mo. 1963 Convention will be held in Denver, Colo., April 21-26, Denver Hilton. The 1964 convention will be held in Rochester New York, April 21-25, Rochester Community War Memorial. Meeting in Denver July 2, 1962, in connection with the annual convention of National Education Assn.; Lake Okoboji AV Leadership Conference, August 19-23, Lake Okoboji, Iowa.

A field service program which provides consultants to assist school systems and colleges and universities in the improvement of their instructional materials programs, was among the year's activities; DAVI also entered into a contract with the U.S. Office of Education under provisions of Title VII, Part A, to prepare abstracts on completed research (LISTING CONTINUES ON PAGE TWENTY-FOUR)

962, TECHNICOLOR CORPORATION TECHNICOLOR IS A REGISTERED TRADEMARK

What makes an award-winner?

A lot of things. Top direction. Excellent photography. Good story development. And, to top it all off, fine color processing. In that area, Technicolor brings you award-winning performance for quality, for service, for brighter, richer, clearer color.

When you specify Technicolor and Technicolor processing for your business and industrial films, you are assured the same expert craftsmen and the same advanced facilities which are devoted to Hollywood's multi-million dollar productions. And, most important, Technicolor processing costs no more—size for size—all the way from 8m to Technirama 70.®

Try Technicolor processing for your next production. Every foot of your film will have the heritage of scores of Academy Awards and business film awards behind it.

SHOW-how speeds know-how

You can ask your people to aim for greater gains in '62 . . . or you can help them with Audio-Visual training and re-training to achieve your goals. Better Selling Bureau suggests both methods, and these sound slidefilms:

Just created:

"HOW TO SELL LIFE INSURANCE SUCCESSFULLY"—

6 sound slidefilms in color, every step in the sale of life insurance shown and spoken, every action pictured. Sales training that applies to every kind of life insurance, in every situation, to every type of prospect.

"SELLING IS MENTAL"—

6 sound slidefilms in color, to underscore the *hows* of selling, with emphasis on dealing with people. Gives salesmen a more effective approach to selling.

"AGGRESSIVE SELLING"—

8 sound slidefilms to enable almost anyone in your organization to conduct successful sales meetings, with minimum preparation and maximum results.

"SUPERVISOR TRAINING ON HUMAN RELATIONS"—

8 sound slidefilms designed to fit any organization wishing to forge its management personnel into a more effective team. Created to develop leadership qualities at all levels of management authority and responsibility.

Each with meeting guides and supplemental aids.

AWARD COMPETITIONS FOR BUSINESS FILMS

THE AMERICAN FILM FESTIVAL

Sponsored by the Educational
Film Library Association
—at New York City—April 25-28, 1962

☆ The 1962 American Film Festival, sponsored by the Educational Film Library Association, representing school, university and public library, and film libraries throughout the U. S. will be held on April 25-28, at the Biltmore Hotel, New York City.

CATEGORIES: 32 major areas of education and information, art and culture, religion and ethics, business and industry, and health and medicine will be offered for final judging by screening groups during the Festival. Selections will have been made by pre-screening juries for final entries.

AWARDS: Blue Ribbon (certificate) Awards to be presented at banquet, Friday, April 27. Entries closed on January 20, 1962.

CENTENNIAL FILM FESTIVAL OF AGRICULTURE

Sponsored by the
U. S. Department of Agriculture

PURPOSE: To encourage, discover and salute superior films on agriculture and to create a greater demand for agricultural motion pictures as a means of education and information from schools, groups and television.

ENTRIES: Films must be 16mm, either color or black & white and there is no restriction as to length. Only films released since January, 1960 will be accepted. There are no entry fees.

INFORMATION: Detailed information may be obtained from: Centennial Film Festival Committee, U. S. Dept. of Agriculture, Washington, D. C.

THE 10TH ANNUAL COLUMBUS FILM FESTIVAL AND AWARDS

Sponsored by the
Film Council of Greater Columbus
in association with the
Columbus Area Chamber of Commerce

Award Screening: Columbus Public Library, Sept. 20-21
Chris Award Banquet: Ft. Hayes Hotel, Sept. 28, 1962

ENTRIES: Film producers and sponsors are invited to enter motion pictures and filmstrips produced in 1959, 1960 and 1961 provided they have not been previously submitted to any Columbus Film Festival. 1962 films are, of course, accepted. Entries (in the categories enumerated below) must be accompanied by 3x5 cards (for preview committees) noting: category entered; color or black & white; running time; a brief summary of film content; type of audience intended.

Films are judged by professionals in the various fields. Entry fee per film is $5 for films up to 1,500 feet; $7 for films of 1,600 feet or more. Entrant also pays roundtrip postage on films. A flat charge of $7 covers all feature films (16mm) regardless of length. A flat charge of $10 for all feature length 35mm prints. (This year both U. S. and foreign feature films will be judged under a new category.) An entry fee of $1.00 is charged for each set of filmstrips entered; the same applies to sets of slides. *Entries will be accepted beginning February 1st; closing date is July 1st.*

CATEGORIES & CHAIRMEN: (Motion pictures and filmstrips should be shipped directly to the following:) Business & Industry (job training; sales promotion; industrial relations; public relations; and industrial safety); *Galvy Gordon, Columbus Public Library, 96 S. Grant Ave., Columbus 15, Ohio;* Information & Education (classroom instructional films; specialized instructional; general information), *Robert Damm, Ohio Historical Society, Ohio State Museum, Columbus 10, Ohio;* Health & Mental Health (health & hygiene; mental health; general medicine; professional health; dental), *Norman Gutry, Franklin County Dept. of Mental Health, 131 E. State St., Suite 306, Columbus 15, Ohio;* Travel U. S. & Foreign & Special Fields (arts & crafts, music, experimental, religion); Feature Films (16 or 35 mm, U. S. and Foreign), *Daniel F. Prugh, Film Council of Greater Columbus, Memorial Hall, 280 East Broad Street, Columbus 15, Ohio.*

AWARDS GIVEN: This is the fourth year of the Chris Statuette Award, presented to the outstanding films in each category. Films receiving the Chris Statuette must be voted "best in photography, story value, and technical aspects of production." Chris Certificate Awards are given to motion pictures, filmstrips, and slides considered "finalists" but not receiving the statuette award.

FREEDOMS FOUNDATION AWARDS

Sponsored by the Freedoms Foundation
Valley Forge, Pennsylvania
Closing Date for Entries: November, 1962

CATEGORIES: Consideration is given to all films produced or released during 1962, which are aimed at building a better understanding of the American Way of Life.

AWARDS: A distinguished jury of State Supreme Court jurists and other eminent citizens selects one film for the top award and approximately 10 others for the George Washington Honor Medal recognition Awards will be announced at Valley Forge on February 22, 1963.

TO NOMINATE: Nomination forms are available from Freedoms Foundation, Inc., at Valley Forge, Pennsylvania.

Other Award Programs Appear on Pages 28, 30
International Film Events Are on Page 32

ANNUAL INDUSTRY FILM PRODUCERS ASSOCIATION AWARDS

IFPA Conference—June 14, 15, 1962
University of California at Los Angeles
Awards Banquet—Beverly Hilton Hotel

ANNUAL AWARDS COMPETITION in recognition of growing number of motion picture units set up for the production of factual films. The purpose of the IFPA awards is to stimulate a constant improvement in efficiency of production, quality of films, and their effective utilization by industry, education, and government.

CATEGORIES: Public information; technical information; sales promotion; training; out-of-plant productions special category (for films that don't fit in any other category and unusual films).

ENTRY INFORMATION: Films should have been completed or first released for public exhibition in 1961. Entry fee of $10.00 should be submitted with each film entered. Films must be submitted by an active IFPA member. For additional information on awards competition and conference, write to John Gregory, Conference Coordinator, 5645 Fernwood Ave., Hollywood 28, California.

THE 20TH ANNUAL NATIONAL SAFETY FILM CONTEST

Sponsored by the National Committee
on Films for Safety
(Entries close February 18, 1963)

ELIGIBLE FILMS: All motion pictures and sound slidefilms produced or released during 1962 whose primary objectives are safety or which have important accident prevention sequences.

CATEGORIES: Motion pictures, theatrical and non-theatrical (16mm) in each of four fields: 1. Occupational. 2. Home. 3. Traffic and transportation. 4. General. Sound slidefilms are judged separately.

AWARDS: Bronze Plaques will be awarded to top winners in each of the four fields and to top sound slidefilms. Award of Merit Certificates will be given to other films for special reasons of subject treatment, production excellence and/or unusual contribution to safety. At the discretion of the judges, awards may be given separately for "instruction-teaching" and for "inspirational" purpose films.

PRESENTATION: Films winning the Bronze Plaque will be shown in October during the National Safety Congress and Exposition in Chicago, Ill. Plaques will be presented at that time to representatives of sponsors of these films by the Committee's chairman. Certificate of Merit winners will receive their awards after the final judging which is in April. All winners will be notified immediately after the judging.

20TH NATIONAL SAFETY FILM CONTEST: INFORMATION ON AWARDS PROGRAM: Write to William Englander, Secretary, National Committee on Films for Safety, 425 North Michigan Avenue, Chicago 11, Illinois.

10TH ANNUAL AWARDS COMPETITION of the NATIONAL VISUAL PRESENTATION ASSN.

☆ The National Visual Presentation Association annually sponsors a "Day of Visuals" in New York City, presenting awards to audio and visual presentations contending for its "Best Visuals" citations in various categories noted. All entries and blanks must reach the committee no later than Monday, April 16th, 1962. Details of the "Day of Visuals" to be held June 4 & 5, at the Roosevelt Hotel in New York, are as follows: SCOPE: Two days of seminars on visual presentation entitled, *The Promise and Purpose of Visual Presentation*. Many of the award winners will be used to illustrate outstanding use of visuals for presentation.

DEFINITION OF VISUAL: For the purpose of this competition, *visual* is defined as (1) motion pictures, (2) filmstrips, slides and overhead projector transparencies, and (3) flannel board, flip chart and other non-projected visual presentations. This excludes point-of-purchase displays, pamphlets and conventional-type "reading matter."

FILM AWARDS

COMPETITION CATEGORIES: Industrial sales and sales promotion, general public service, consumer sales and sales promotion, sponsored educational, employee training, and employee relations.

JUDGING: Judging will be based primarily on how successful the visual accomplished the communication job it was designed to do. A point system will be used.

FOR INFORMATION: Write M. E. Schack, National Visual Presentation Association, 19 West 44th Street, New York 36, New York.

SAN FRANCISCO INTERNATIONAL FILM FESTIVAL

(Film As Communication Section)

San Francisco—Oct. 31-Nov. 13, 1962

CATEGORIES: Art and Culture (relating to subject matter); Film as a Medium for Artistic Expression; Industrial, Government and Institutional Films for Internal Use; Government Films for General Public Information; Films Sponsored by Industry, Companies or other Commercial Institutions for the General Public; Films Sponsored by Civic and Community Organizations or Other Non-Profit Institutions for Public Use; Classroom Films; Adult Education (technical, training and college classroom); Adult Education (for general public).

ENTRY INFORMATION: Application blanks to be sent in April; receipt of forms deadline is July 15th. Only 16mm release prints will be accepted but original gauge may be 8mm, 16mm or 35mm. Film As Communication Final Screenings and Conference will be held Thursday November 8 through Sunday, November 11. The general Festival is set for October 31-November 13, 1962. Requests for application blanks and additional information should be directed to: San Francisco International Film Festival, 172 Golden Gate Avenue, San Francisco 2, California.

T V COMMERCIAL COMPETITION

Chicago 23, Illinois

EASY AS 1 - 2 - 3 Picture 1 shows how easy it is to setup and insert film. Picture 2 shows the large 9" x 7" movie screen. Picture 3 shows how quick the VIDEOMASTER can be put away. Actually, in ten seconds you can be ready to show the movies of your product to any prospective buyer. Film subjects can be changed in three seconds merely by removing and inserting different cartridges. No threading . . . no rewinding!

Contact us NOW for data on the BIGGEST POWER PACK OF SALES EVER PUT INTO A FOURTEEN-POUND PACKAGE!

"It kept them glued to their seats"

To our way of thinking, that does *not* describe a good film.

A good film lifts you out of yourself and onto the screen.

You're a *participant*.

A good film has the sight, the sound, the *feel* of life itself.

It makes you glad, or sad, or mad.

A good motion picture moves *you*.

QUALITY
QUALITY
QUALITY
QUALITY
QUALITY

is what they're saying about Washington Video Productions

A good motion picture is not stereotyped. Here are three of many that now serve our clients. Perhaps you would like to screen one of them.

Heart of a stranger is an entertaining, exciting, true story filmed off the coast of Red China and in the British Crown Colony, where refugees from tyranny stream daily across a wooden footbridge to freedom . . . and to possible starvation in the very midst of freedom. It is an appeal film that is appealing. 35mm or 16mm Black and White.

Mark is the story of a little boy discovering a town, the Naval Academy, boats and activities around Chesapeake Bay. Sights and sounds as he experiences them. Mark in his hour of adventure grows just a bit more mature. The audience traveling with Mark will have grown a bit younger. 16mm Color.

These people know the steel business is a technical industrial film . . . definitely hard-sell. It shows how the individual reflecting the philosophy of an open mind produces top grade steel products. Although designed for presentation to people knowledgeable in the steel business, the photographic techniques make it entertaining as well as informative.

When you're considering using a motion picture to convey your message or tell a story, quality is of primary importance. Quality is what makes the difference between a labored, poorly photographed effort and a really professional motion picture. W.V.P. has all the directors, writers, cameramen, technicians, equipment and facilities to produce the finest quality . . . motion pictures comparable to the best made anywhere. We'd be delighted to screen some of our films for you. And we'd welcome any questions you might want to ask about having a motion picture made to your specifications.

FILM PRODUCERS ASSOCIATION OF N. Y. Sound Corp.), *Sound Facilities & Service Comm.;* Herman Edel (Music Makers), *Musical Commercial Producers Comm.;* Irving Hecht (Cineffects), *Optical Comm.*

SPECIAL COMMITTEES: Lee Blair (TV & Film Graphics), *Standard Producer-Agency Contract Comm.;* Robert Gross (American Film Producers), *NYC-FPA Building Code Comm.*

PURPOSE: An organization of professionals in the art and craft of motion picture making, dedicated to preserving standards of quality, service, good practice, ethics and to the development of the Industry. The organization, through membership meetings and active committees, works to advance the motion picture industry in all of its branches; to establish and maintain a high standard of ethics among producers, their employees, their suppliers and their clients; to distribute accurate information with regard to technical improvements; to advise the general public on the importance of the film industry in the nation's economy; to encourage responsible people to enter the industry; to promote, stabilize and coordinate all elements of the industry.

THE FILM PRODUCERS ASSOCIATION OF MINNESOTA

OFFICERS: Anthony Lane (Anthony Lane Film Studios, Inc.), *president*; Cliff R. Sakry (Promotional Films Inc.), *executive secretary*; Richard W. Jamieson, (Empire Photosound, Inc.), *treasurer*; William Heideman (Anthony Lane Film Studios, Inc.), *manager, 2-year term;* William S. Yale (Empire Photosound, Inc.), *manager, 1-year term.*

MEMBERS: Countryman-Klang Film Productions; Empire Photosound, Inc.; Film Productions Co.; George Ryan Films, Inc.; Promotional Films, Inc.; Reid H. Ray Film Industries, Inc.; Rusten Film Associates; Anthony Lane Film Studios, Inc.; Studio One, Inc.

PURPOSE: The advancement of the arts and crafts of film production for the betterment and improvement of the film industry; the establishment of improved client relations and the exchange of technical information.

PROJECTS: Advertising, publicity and public relations campaign to build recognition and prestige for the accredited local film producers; to enlighten business and industry in the types, uses and advantages of films and to encourage wider use of films in training, selling, advertising and public relations.

MEETINGS: Third Monday of each month, 6:30 p.m., Minneapolis.

Higher Standards: a Common Goal

☆ By their participation in these national trade groups, industry companies emphasize one common goal: *raising the standards* of visual media for their clients; striving for results.

PRODUCER & LABORATORY GROUPS

Leading National & International Film Trade Organizations

THE ASSOCIATION OF MOTION PICTURE PRODUCERS AND LABORATORIES OF CANADA

OFFICES (of the President): 1103 St. Matthew Street, Montreal, P. Q.; (of the Executive Secretary): Suite 1301, 55 York Street, Toronto 1, Ont.

OFFICERS: Henry Michaud (Omega Productions Inc., Montreal), *president*; John T. Ross (Robert Lawrence Productions (Canada) Ltd., Toronto); *first vice-president*; Ralph Foster (Meridian Films Ltd., Toronto), *second vice-president*; Gerald S. Kedey (Motion Picture Centre Ltd., Toronto) *immediate past president*; Frank A. Young, Suite 1301, 55 York Street, Toronto, *executive secretary*.

DIRECTORS: R. J. Beaudry (Pathe-Deluxe of Canada Ltd., Toronto); C. H. Everett (Crawley Films Ltd., Ottawa); L. M. Parry (Parry Films Ltd., Vancouver); S. D. Peterson (Peterson Productions Ltd., Toronto); Tolly Reviv (Tolea Film Productions Inc., Montreal); A. T. E. (Ted) White (Eastern Film Laboratories Ltd., Halifax).

MEMBERSHIP: Canadian firms, proprietorships, partnerships and corporations engaged in motion picture production or laboratory work are eligible for Active Membership. Persons, firms or organizations acceptable to the membership, interested in the furtherance of the motion picture production industry in Canada are eligible for Associate Membership. Present membership, 48 Active and 9 Associate for a total of 57.

PURPOSE: To promote the common interest of those engaged in the motion picture production and laboratory industry in Canada by maintaining the highest possible standards in the production of motion pictures for commercial, theatrical or television release and to represent the industry in its relations with government, other associations and the public at large; to encourage government agencies to have required films let by tender to private producers.

1962 ACTIVITIES: 1. To continue liaison with the Canadian Broadcasting Corporation and the Board of Broadcast Governors. 2. To continue to acquaint industry, advertising agencies, television stations and networks and other potential sponsors with the work of the Canadian film producers. 3. To study in greater depth the public relations aspects of the film-making industry and to develop a "starter" program by gathering all pertinent and useful facts and distributing same to the members for possible use before meetings and public bodies. 4. To cooperate with the Canadian Film Awards program—the all-Canada film showcase.

INTERNATIONAL SCREEN ADVERTISING SERVICES

OFFICE (of the Secretary): 13, rue du Canal, Brussels 1, Belgium.

ARRIFLEX®"

What leads veteran film producers to "retool" with ARRIFLEX, as their assignments become more and more challenging?

The answer has been spelled out with persuasive certainty over Arri's young, dynamic history—in terms of *rugged precision, versatility,* and *money-saving advantages.*

Hundreds of industrial and theatrical film producers use ARRIFLEX 16mm and 35mm cameras exclusively. In many cases, Arri equipment was first tried experimentally... then swiftly took over the lion's share of production filming.

Have you ever handled an Arriflex? You can get to know its exceptional features by writing to us for detailed literature... or to arrange a demonstration through one of our franchised dealers.

Sponsor audience views scene from "Flair" at recent New York premie

Modern Premieres "Flair For Living"

☆ *Flair for Living*, a new TV vehicle for sponsored free-loan films, was introduced to an audience of national advertisers by Modern Talking Picture Service in the Grand Ballroom of Hotel Roosevelt, New York, N.Y., last month. Similar presentations are to follow in other cities.

The film is a series of half-hour filmed programs in which short films from several non-competing sponsors will be introduced by Modern's own hostess.

Aimed at Daytime Audience

Aimed primarily at daytime homemaker audiences, *Flair for Living* is hostessed by Aileen Paul, home economist and TV commentator, currently president of the New York City chapter of American Women in Radio and Television.

Modern developed the format on the basis of experience with earlier vehicles and extensive interviews with TV station programming people. The continuing series of women's balanced service programs is expected to achieve 2 or more telecasts for each spon at a cost of $12.50 per telecast

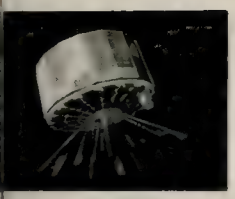
50,000 Showings of "Digest"

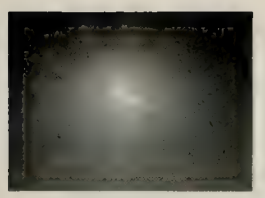
An earlier vehicle without ho ess, *The Modern Home Dig* has achieved nearly 50,000 t casts for participating sponsors

Flair for Living is scheduled begin showings in late spring.

Modern Talking Picture c cials report *Flair for Living* is t most promising television film p ject of the new season.

Pictured at premiere (l to r): Mod v.p. Carl Lenz; "Flair" hostess Ail Paul and Modern president, Fr Arlinghaus.





Film program director Tak Kako (WABC-TV) speaking at New York premiere of new TV series.

WASHINGTON FILM COMMENTARY

by Mary Finch Tanham

Washington Correspondent for Business Screen

"The Eagle's Talon" Shows U. S. Defenses on the Alert

. . . Last month, a select group of Washington officials, Association leaders, political chairmen, and Pentagonites met in the screening room of the MPAA (Motion Picture Association of America) to view a most assuring film on the state of our nation's defenses.

Titled *The Eagle's Talon*, and starring Secretary of Defense McNamara, the 25 minute color motion picture erased doubt in the mind of the layman that the U. S. has narrowed, if not closed, the "missile gap."

Hard-Hitting But Lucid Film

Undoubtedly covering some of the most complex, controversial, and consequential subject matter to be presented to the public, the film is hard-hitting, but lucid; it concentrates on the present build-up of conventional forces, the continued might of our strategic forces, and the new look in budget packaging and civil defense. Its theme is that we have many options to meet possible crises.

Executive Producer Bertram Kalisch has combined stills and live action — in well balanced color — to point up the role of the different military services and the broadbrush mission of the Departmen of Defense. Few will walk away from the film without deep admiration — and great confidence — in superhuman Secretary McNamara.

We're Shareholders in Defense

In summary, *The Eagle's Talon* achieves its goal — to demonstrate to Americans that we're all stockholders in the Department of Defense; we may not be able to guarantee peace by preparing for war, but if conflict is forced, we do not intend to lose.

The carrier Enterprise is shown in scene from "Eagle's Talon."

Walter Cronkite narrated this film report which will be distributed to all military exchanges, and then may be borrowed by civic groups, political associations, clubs, schools, etc. Thousands will see it on the Army's *Big Picture*, which will screen a lengthened version on approximately 350 TV stations.

Washington's Norwood Films, subsidiary of Norwood Productions, will distribute *The Eagle's Talon* as part of its newly-awarded contract on government films.

As in the past, these yearly film reports are circulated for many months (usually 10), then retired to Defense's film library where they assume historical significance.

Other selected Armed Forces films for public and television use have just been listed in a little pamphlet published by the Office of Public Affairs, Department of Defense. This 1962 list draws from the Catalog of Government Films, available from the U. S. Office of Education, Visual Education Service, Washington 25, D. C. Price $1.75. The Service films are available to the public under the following conditions:

1. No admission or other fees of any sort may be charged in connection with the showing of Armed Forces films.

2. No portion of the films may be reproduced, edited, altered or cut in any manner.

3. Films must be shown in their entirety, including all titles.

4. Films must be shown with sound projection equipment and qualified operators must be provided by the borrower.

5. Films must be returned, postage prepaid, no later than 4 hours after the final showing.

Industrial Film Columnist of London Times Visits U. S.

. . . According to Robinson Rigg, who probably has the d tinction of being the only Indu trial Film Correspondent for daily financial newspaper, t

British businessman has become increasingly certain of the value of industrial films.

Rigg, whose column appears in the LONDON FINANCIAL TIMES, is on a three month tour of the U.S., covering the audio-visual industry from every angle. He says: "For over 60 years, British industry has been making films to spread sales messages, to develop public relations, and to streamline employee training, but only within the last decade has industry accepted the motion picture as an *essential* part in its communications equipment."

Three weeks out of the month, Rigg's column, or his selected list of industrial films, appears in the TIMES. Even the smallest item stirs interest. For example, the recent mention of a short film about the European Common Market, sponsored by a British rubber company, brought an immediate flurry of 72 inquiries! And, although British industry produces but a fraction of the number of films produced in the United States, Rigg attended 117 London previews during the past winter months. Every two weeks, under his supervision, the LONDON FINANCIAL TIMES screens important business films for bankers, politicians, insurance executives, ad men, and stock brokers — and others who wish to keep up with what's going on in industry. (See Below)

The British Embassy in Washington takes industrial films seriously, too. At least once a month, commercial attaches screen British films for American friends. Recently, for instance, the Sportscar Club of America was invited to the Britisher's modern new "rotunda" to see three motor car films about the Monte Carlo Rally, the Alpine Rally, and at the LeMans races. Representative British car importers attended the screenings so that yankee enthusiasts could talk shop with experts.

* * *

NBC's "Today' 'Show Featuers Original Score from "Mark"

. . . Even though the film was not yet in the can, the original music for George F. Johnston's *Mark* was picked up for preview on NBC's "Today" show. The joyously juvenile jazz melody, spontaneously composed for the film short by Marian McPartland, has been named "Mark's Time." Those who have seen the highly imaginative film — as yet unsponsored — say it's really something to wander with the young boy *Mark* through the cobbled streets of Annapolis on a Sunday morning — and to watch the U. S. Naval cadets march to church to the hoot-toot of a ten penny whistle!

* * *

Pilgrim Film Services Has a New Optical Effects Printer

. . . The recent acquisition of a new "optical effects printer" by Pilgrim Film Services, Inc. rounds out the extremely varied and complete film facilities available in the booming Washington area. Eastern seaboard producers and government agencies are already using the machine for extending footage of orbital flights, for freeze frames of medical research, and for super-imposition of titles, with shadows, over live action. . . .

"LOCKED ON"

To most factory workers, the Reliability man is "one of them hundred or nothing guys — if at first you don't succeed, cut your throat." But in this new age of fantastic tolerances, out-of-this-world speeds and extraordinary precision, the worker **must** come to understand the Reliability program and live with it — perhaps even recapture some of his old pride of craftsmanship.
"Locked On" is an excitingly dramatized, but uncompromisingly honest, documentary which has been notably successful in this effort, featuring Ken Lowell ("a yesterday guy in a tomorrow job and I don't know what the hell to do about it"), with astronaut Deke Slayton playing himself, in a thrillingly suspenseful countdown and launch. Winner of IFPA's "Cindy" special award and other recognitions.

Sponsor: Convair Astronautics, Div. of General Dynamics. 54 minutes — color.

Bureau of National Affairs' New Film on Fringe Benefits

. . . The Bureau of National Affairs, Inc. has just announced the completion of an unusually clever film on the well known, but often misunderstood, subject — "fringe benefits."

Featuring William Bendix in his first "business" film, *Cash On The Barrel Head* shows just what happens when an employee arbitrarily decided to take his $100 a month to pay for a station wagon rather than receive his usual company benefits.

Bendix, with Tom D'Andrea as his pal, riotously loses his privileges, right and left, when he takes the money; first, his parking spot, then, his coffee break, his place on the company bowling team, and his right to eat at the company cafeteria. But this is nothing compared to the added cost of his lost vacation, holidays, health and accident insurance, life insurance, pension, etc.

Bendix finally wises up — (and so does everybody viewing the film) — to the fact that it will cost him a whale of a lot more than $100 to duplicate the benefits he has lost.

According to officials of BNA, who have had phenomenal success with previous management/employee relations films, this motion picture is high in entertainment value, but has a very serious underlying purpose. Management has long recognized that employees tend to take fringe benefits for granted; when Bendix says, "Gimme the cash instead of the benefits", he's speaking for a large segment of employees in business, industry, and the government.

A scene in the BNA's new film produced and directed by Reid Ray.

Reid Ray Film Industries, Inc., produced the film. It was directed by Reid H. Ray, and the script was by Robert Bruce. New York actor John Becher portrayed the company personnel manager in scenes which were shot on location in St. Paul, Minnesota.

Timely Short on Income Tax Gets Large Theater Audience

. . . An award winning government film, which is particularly timely this month, has been receiving fantastic acclaim all year long from theatrical movie chains in every part of the country.

Since The Beginning Of Time, which was designed over three years ago by the Internal Revenue Service to gently poke fun at (and WITH) the American taxpayer, has been exhibited 420 times through four theater chains to an audience of over 300,000 persons.

According to Charles Lammond, Public Information Officer of IRS, the government's files are bulging with requests for theater showings—most marked "Rush-Airmail".

Originally a half-hour film, the animated featurette has been cut to ten colorful, very amusing minutes, wherein taxes are traced way back to dinosaur days. Gene Starbecker wrote and developed the picture, and Milner-Fenwick provided the snappy, humorous animation, which makes this public service film both educational and entertaining.

Here's to more light treatment of heavy government subjects!

Entries Hit Record of 600 For American Film Festival

☆ A record number of American Film Festival entries — nearly 600 16mm films and 35mm filmstrips — reflects increasing quantity and quality in this fourth annual competition.

Entries have come from producers, sponsors and distributors in 42 states.

Increased use of film for many purposes is shown in the number and diversity of the 1962 festival entries. These range from films that sell products or promote understanding of local, national and international problems — all the way to films that show possibilities of the medium as an art form.

The Festival is sponsored again by the Educational Film Library Association, and is set for April 25-28 at Hotel Biltmore in New York City.

The event features competitive screenings at which juries of audio-visual experts judge films nominated in 36 subject categories grouped under general headings of Art and Culture; Business, Industry, and Public Relations; Education and Information; Health, Medicine and Safety; and Religion and Ethics.

The Festival's Blue Ribbon awards will be presented to top-rated films and filmstrips at the annual award banquet on April 27.

Advance information about the screenings and program events, all open to the public, may be obtained from EFLA, 250 West 57th St., New York 19, N.Y.

* * *

Safety Films Final Judging Scheduled for Late April

☆ Sponsors and producers of safety films have submitted entries in the 1962 annual contest sponsored by the National Committee on Films for Safety.

This is the 19th annual contest conducted exclusively for films on safety. Final judging is set for late in April.

Awards will be made for selected motion pictures, theatrical and non-theatrical (16mm), dealing with safety in each of four fields — occupational, home, traffic and transportation, and general. Sound slidefilms will be considered for awards separately.

All awards will be made by the national committee as in previous years — to those films which, in the opinion of the judges, best serve to encourage accident prevention.

The deadline for receipt of entries was Feb. 16, 1962.

Henry G. Lamb, American Standards Association, is chairman of the National Committee on Films for Safety. William Englander, National Safety Council, is secretary.

Others on the committee are: Lee C. Richardson, American Association of Motor Vehicle Administrators; W. L. Robinson, American Automobile Association and American National Red Cross; A. F. Schaplowsky, American Public Health Association; E. R. Granniss, American Society of Safety Engineers; Richard G. Becker, Association of Casualty and Surety Companies; James T. Wadkins, Association of Safety Council Executives; William R. Talbott, Automotive Safety Foundation; Dr. B. D. Holland, Council on Industrial Health (American Medical Association); L. J. McEnnis, Jr., Insurance Institute for Highway Safety; M. R. Darlington, Jr., Auto Industries Highway Safety Committee; Ha V. Kelly, International Association of Chiefs of Police; and others.

TWA's Automated Three-Screen Presentation on Doppler Navigation System at Symposium

AN AIRLINE'S BIG PROBLEM is precise navigation to facilitate the placing of more planes in a given amount of space.

When a system to do that is found, only part of the job is done. Education of personnel comes next. That was Trans-World Airline's problem.

The answer was utilization of a unique combination of various audio-visual aids at a TWA-sponsored symposium to acquaint representatives of the world's airlines and various governmental agencies with operation of the revolutionary Doppler radar navigation system.

TWA will be the initial participant this year in a detailed Federal Aviation Agency project aimed at better utilization of the trans-Atlantic airspace.

Participant in FAA Project

A. M. Heisig, TWA manager of field training, had this to say about the use of audio visual aids at the symposium:

"Overhead projection during sales meetings, training programs and management presentation is certainly not new. Nor, as a matter of fact, is Technamation, rear-view projection, and dual podiums for speakers. However, when you combine all of these techniques and mediums, add the use of three 9 by 12 rear-view screens, and couple it with semi-automatic overhead projection, then you have technique that is unique."

That's the combination of presentation techniques unveiled by TWA at the recent Doppler Navigation Symposium in Kansas City, Mo.

More than 200 industry, government and press representatives from 28 nations and 27 of the world's airlines witnessed the program.

Shows Installation of System

Purpose of the symposium was to describe how TWA and Bendix Corp. developed and installed the dual Doppler system on a fleet of Boeing 707 Superjets.

The three-screen technique was necessary because of the complex and technically detailed script material used to describe factual data displayed on each of the screens.

"Audience reaction to this notable departure from the usual stereotyped technical presentation was enthusiastic," Heisig reports.

"Comments indicated that it was the first time this group had seen a three-screen presentation complete with Technamation," Heisig added.

Audience Is Invited Backstage

Because of the tremendous interest in the projection techniques, the audience was invited backstage to inspect the projection installation.

The special central controller console was designed and operated by D. M. Burke, TWA's supervisor of field training. The console has the following special features:

1. Three different sources of power which prevents overloading the outdated electrical circuits found in some of the older hotels.
2. Power provision for four projectors—three full time and one back-up machine
3. Slide change signal devices for all projectors as well as remote control, on and off switches for all machines.

Storyboards Aid the Experts

The Doppler radar navigation system was explained by TWA engineering, maintenance and operational experts, and it was necessary to maintain a complete set of storyboards for each of the speakers.

Two shops helped to produce the visuals. In all, over 400 8″ by 10″ projectuals were used, most of the material produced by means of Diazo reproduction.

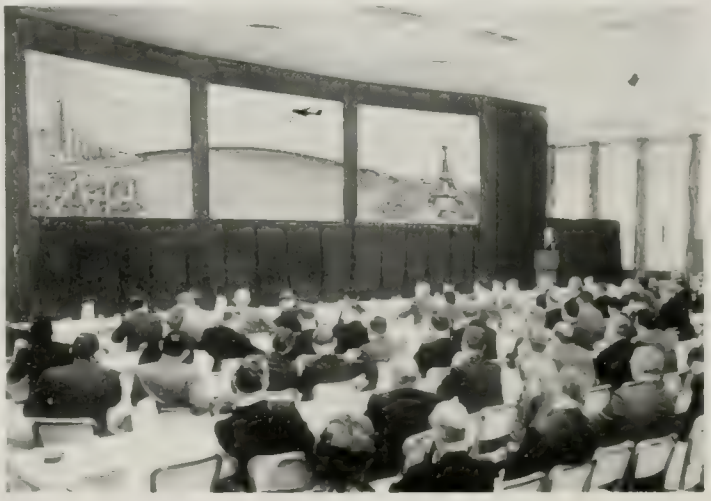
All art work and photography for the presentation was handled by TWA's training center and at the Mid-Continent International Airport Graphic Arts shops, both in Kansas City.

"Attention Riveted to Screen"

"Results of the presentation were indeed gratifying," said Heisig, "with audience attention riveted to the screen. Complicated explanations of the Doppler principles and equipment were presented clearly through well designed polarized projectuals."

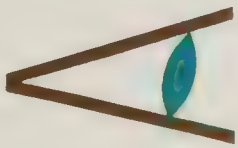
And here was the highlight: One of the most outstanding polarized visuals used was suggested by Captain Gordon Granger TWA's director of flight research and development. Working with Jack Sands of the training center staff, Granger designed a three-screen visual showing a profile of TWA's trans-Atlantic route from Paris to New York. Next, they created a polarized moving background complete with a Boeing 707 and activated Doppler radar beam.

Boeing 707 Shown in Flight



This aircraft, with simulated working Doppler radar, was then "flown" across the full width of the three screens as Captain Granger concluded his speech.

"It really brought the house down," said Heisig, "when the flight was slowed down in mid Atlantic to keep pace with Captain Granger's speech."



* * *

EDITOR'S NOTE: Special articles on visual presentation techniques are invited from our many subscribers.

TWA's recent Doppler navigation symposium involved simultaneous use of three 9′ x 12′ rear-view screens and Technamated Vu-Graph stills.

What's Ahead on the Meeting Calendar

Overseas Ad Film Festival Set for Venice June 11 to 15

☆ Plans are well underway for the Ninth International Advertising Film Festival to be held in Venice (Lido), Italy, June 11 to 15, 1962.

Several nominations to the 15-man International Jury have been received and approved. Remaining vacancies are expected to be filled soon and details announced.

Thomas P. Olesen, of Copenhagen, will again act as secretary to the jury. Dr. J. L. Klein, managing director of Genoopschap Voor Reklame, Amsterdam, will be assistant secretary. Dr. Klein represented Holland as one jury member at the 1958 Festival.

The jury will divide into two sections for judging of films in the two groups — cinema and television, a London report announces.

Judging of both first and second viewings of each group will be carried out only by the corresponding section of the jury. Only exceptions will be the two Grand Prix, whose selection will be made by the complete jury.

Basil Wright to Be Speaker At Industrial Film Conference

☆ Basil Wright, noted British documentary film-maker, will be one of the featured speakers at the 1962 Industry Film Producers Association Conference, June 14, 15 and 16 at the University of California at Los Angeles.

Wright, maker of such classic documentaries as *Song of Ceylon, Night Mail, World Without End* and *Immortal Land*, is coming to the U. S. to lecture on documentary film-making during the Spring semester at UCLA.

The Industry Film Producers Association is entering its sixth year as the official organization of and for the "in-plant" film producer. IFPA has over 400 members in industrial film units all over the country.

PRSA National Meeting in Fall

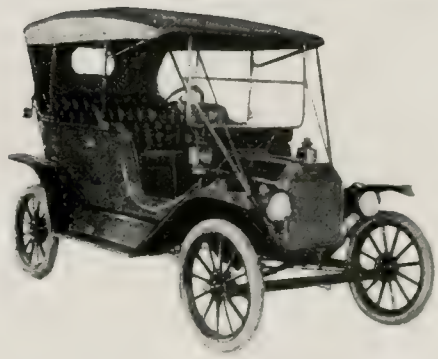
☆ The 15th annual national conference of the Public Relations Society of America will be held in Boston, Mass., Nov. 12 through 14, it was announced by Walter W. Belson, PRSA president.

7½ Million See Agriculture Department's Films in 1961

☆ More than 300 Department of Agriculture film subjects have been shown a total of 109,000 times to more than 7½ million people during 1961, the Department's distribution section reports.

Four million persons, more than half the total number, viewed the Department's films through services of USDA's cooperating film libraries. Three and a half million viewed prints from Department field offices and through Washington distribution.

The Distribution section estimates that another 8½ million persons attended showings of the existing 12,000 prints of Department films privately owned, which brings the total up to 16 million viewers who have attended live shows.



The Department reports that in 1961, a total of 185 million viewers saw the department's films on TV.

The concept was decidedly different. That's why Masonite Corporation of Chicago came to Buffalo for a sales promotional film to really dramatize their answer to the "space age" problem in housing. Titled "The Incredible Shrinking House", it was fully created and produced in Holland-Wegman's big Buffalo facility.

Unexpected Bonus: Although created specifically for sales promotion *to* dealers, the dealers responded by demanding prints as sales ammunition of their own. In fact, it has been so effective that Masonite has authorized a TV adaptation for widespread national distribution.

Let us suggest a fresh, new approach to your next film. Just call or write Ed J. Wegman. We'll be glad to counsel with you anytime—anywhere.

"THE CASE OF THE BEWILDERED BRIDE"

On the first morning home from the honeymoon, an engaging young bride learns that her husband has invited his and her parents to dinner tonight. Slight problem, she's never cooked. But she makes the grade, after some actionful suspense . . . and after she (and her Home Ec-Young Housewives audience) has realized the "good life" for her family that will reward sensible nutrition practices . . . and, incidentally, she has noted some beneficial uses of evaporated milk. Multiple award winner (including NVPA, Sales Executive Club, etc.)

ELWOOD SIEGEL, *President & Executive Director*
EDWARD F. BOUGHTON, *Vice President & Executive Producer*

M E M O : To Crossword Puzzle Fans

F R O M : Woody Siegel and Ed Boughton

Gentlemen:

"Telic"...may be just the word you're looking for!

...It's a five letter adjective meaning "purposive", from the Greek 'telikos'. The noun, "telesis" is defined by Merriam-Webster's Third International as

> "The attainment of desired ends by the application of intelligent human effort to the means."

and by the Oxford English Dictionary as:

> "The intelligent direction of effort toward the achievement of an end."

In an earlier textbook on Sociology (1906) Messrs. Dealey and Ward wrote...

> "Civilization chiefly consists in the exercise of the telic faculty."

.....

We hope this information proves helpful.

.....by the way, if you're thinking of making films in 1962 we suggest that you may wish to exercise your "telic faculty" by co-producing them with TELIC, INC.

News Along the Film Production Lines

Ford's 1963 Car and Truck Introduction Goes to Wilding

☆ Wilding Inc., has been selected by the Ford Division of the Ford Motor Company to produce the 1963 car and truck introduction show for Ford dealers and salesmen, H. Williams Hanmer, president of Wilding, has announced.

Wilding has, for many years, been the major supplier of sales training films and meeting material to the Ford Division.

Dephoure Becomes D4 Films; Opens Studio at Newton, Mass.

☆ Marking its third major expansion move in its 27-year history, one of New England's leading film production companies has changed both name and facilities. As of March 1, Dephoure Studios, Inc. became D4 Film Studios, Inc. (with no change in officers or personnel).

On that date, also, the company occupied brand-new, air conditioned studios with expanded film facilities at 56 Elmwood Street, Newton, Mass. Adjacent to the Newton Public Library building in this pleasant Boston suburb, the new studio plant has expanded parking facilities for area-wide clients.

Offering "Hollywood production with New England economy" as its slogan, D4 also has a new telephone number: WOodward 9-7770.

Ginn Co., Jam Handy Join to Correlate School Filmstrips

☆ Filmstrips for elementary and high school classes in all subjects will be produced by Ginn and Company of Boston, leading publisher of school textbooks, and The Jam Handy Organization, Detroit, pioneer producer of audio-visual materials.

Combination of these two organizations will bring about a close relationship of the textbooks with visual instruction materials for practical classroom use, the companies announced. Filmstrips to be produced will be based on the content of specific textbooks published by Ginn and Company.

First filmstrip series of this joint production operation will be released in early 1962. Distribution to all schools in the U. S. and Canada will be handled through the regional sales offices of both companies.

Irwin Young Elected Preside Of Associated Screen Industri

☆ Board of directors of Asso ated Screen Industries, Ltd., Mo treal, Quebec, recently announc election of the following officer Irwin Young, president; Murr Briskin, vice president; Arth Nalven, secretary; Jack Felle assistant secretary; J. C. Wrangham, treasurer.

Nalven will be in full charge the company's plant operatio and Wrangham in charge of a ministration. Both will work clo ly with Briskin as a manageme team, Young announced.

Ansco sets America's standard of low contrast 16mm color with...

Anscochrome® Professional Camera Film Type 242

Designed especially for camera use when high quality release prints are important. The excellent color fidelity and low contrast of this camera film—plus its unique ability to record detail in shadows—make Anscochrome Type 242 *first choice* of many quality-conscious professionals. Film speed is 25 with 3200K tungsten lamps. For full details, ask your Ansco Man.

When the NEED is SPEED Choose SUPER ANSCOCHROME 16mm Film

Both Daylight and Tungsten Super Anscochrome have film speeds of 100. Produce accurate, pleasing color at lower light levels—often eliminating the need for special lighting equipment.

ANSCO—America's first manufacturer of photographic materials . . . since 1842.

nalism degree in Paris and a Ph. D degree in law from the University of Zagreb. After further study in France, he represented an American film company in Yugoslavia, served as assistant judge in the courts of Zagreb and Kragujevac, taught law in a school of business administration, edited a daily newspaper, and served as executive director of the country's Cooperative for Educational and Industrial Films.

Among the educational films Dr. Herzog has produced for Encyclopaedia Britannica are: *Je Parle Francais,* a complete filmed course in French; *Biography of the Unborn,* a prize-winning film on embryology; a symphony orchestra film series; *Ballad of the West,* which was a Venice Festival prize winner; and a world geography film series.

Dr. and Mrs. Herzog live in Wilmette, Illinois.

Thomas, Telefilm President, Dies After Short Illness

☆ J. A. Thomas, president of Telefilm, Inc., died on Jan. 21 at Burbank hospital following a short illness. He was one of the organizers of the Hollywood service organization for producers and film-users, and president since the company's inception in 1938. He developed a number of the 16mm film techniques now in use throughout the industry.

Mr. Thomas leaves his widow, Melrose, two brothers and three sisters.

Business of the corporation will be continued. Until a new president is named by the board of directors, James B. Pinkham, executive vice-president, is serving as the company's chief executive.

Industry Film Producers Set Conference for June 15-16

☆ The 1962 Industry Film Producers Association Conference sessions will be held at the University of California at Los Angeles, June 15 and 16. The Awards banquet will take place in the International Ballroom of the Beverly Hilton, Beverly Hills.

The foyer of the International Ballroom will have ample space for sponsors' displays. Literature and exhibits may be arranged at the Beverly Hilton at no cost to Conference sponsors. Conference Vice-President Tony Gorsline is working with other members of IFPA's national board in putting together the program.

This year's conference will have a carefully integrated program of technical papers, special interest speakers and demonstrations, with continual emphasis on participation by conference attendees.

Germany's Order of Merit Awarded to Nathan D. Golden

☆ The "Order of Merit — Class I" by the Federal Republic of Germany has been awarded to Nathan D. Golden, director of the scientific, photographic and business equipment division, Business and Defense Services Administration, Department of Commerce.

Golden was decorated with this high honor for his outstanding services in promoting cultural relations and trade in the photographic field between Germany and the United States.

In government service for the past 36 years, Golden during that period served the motion picture and photographic industries as their liaison. He has fostered closer relationship between the U. S., foreign countries and business, in a two-way trade of motion pictures and photography.

KALART VICTOR

SERIES SEVENTY 16mm SOUND PROJECTORS

outstanding for performance,
simple to operate,
easy on film...

and above all,
DEPENDABLE

There's a lot to like about the way a Kalart/Victor shows your 16mm sound films. Picture quality is brilliant. Sound is superb. Special features provide for simplicity of operation and protection to valuable films. But of all the reasons for choosing a Kalart/Victor, the projector's dependability comes first with most people.

What is there about a Kalart/Victor that makes it so dependable? For one thing, its basic design ensures trouble-free performance with such features as large single drive sprocket, stationary sound drum and self-aligning pull-downs. There's nothing temperamental about a Kalart/Victor. Another reason is the high standards each projector must meet. For example, no Kalart/Victor ever leaves the factory unless it has passed a rigid inspection after 6 hours of continual operation.

Decide now to see your Authorized Victor Audio-Visual Dealer for complete information about the one 16mm sound projector you can really depend on.

Free booklet—"How Industry Profits from Films." Covers use of audio-visuals in every phase of business. Send now for your copy. Address your request to Victor Animatograph Corp., Dept. 8V

"Land of Lincoln" Holiday Theme of American Oil Film

☆ *Happy Holidays . . . in the land of Lincoln,* is American Oil Company's new motion picture designed to encourage automobile travel and attract tourists to scenic, historical and educational sights in Illinois.

Motorists who see the film, can decide in advance what places to visit, type of facilities available, activities other than sight-seeing, for a family week-end trip.

Unusual in this film is that the camera concentrates not on cinematic angles but on people. The production is a "participating" picture, where the audience climbs into the action and does things.

Sights themselves run second to "people seeing things" and "people doing things," with unusual emphasis on character-reaction.

The project has the approval and cooperation of the Illinois Department of Conservation and Illinois Division of Industrial Planning and Development, which are responsible for developing tourism in Illinois.

The 28-minute full color sound film will be available free for showing through the public relations department of the Standard Oil Division of American Oil Company in the Midwest. It will be distributed by Modern Talking Picture Service.

Parthenon Pictures of Hollywood, Calif., made the picture, with Charles Palmer as writer and producer. Director was Jean-Philippe Carson and head cameraman was Mike Murphy.

* * *

Sears' Ted Williams Film Ties in With Ad Campaign

☆ *Batting With Ted Williams* is a Sears, Roebuck and Company new film which is available to all non-theatrical audiences.

The film and the great baseball star (who joined Sears after the 1960 season) will be the center of an advertising campaign in March in READERS DIGEST, LIFE, LOOK, and in sports publications such as FIELD AND STREAM. The advertising will plug the film.

Ted Williams will introduce the film at a baseball coaches' symposium soon. The film may be borrowed from Modern Talking Picture Service, 3 East 54th St., New York 22, N. Y. or any of its 30 nationwide regional exchanges.

"THIS IS STANDARD OIL"

The "big picture" of a great American enterprise; to give its far-flung employees, its own and those of its many subsidiaries, a "feeling of the whole" and their individual places in it — plus a frank demonstration of the new competitive challenges, the need for re-examining every operation, and the new personal opportunities which will result.
Synch dialogue on the top officers, with exciting pictorial coverage of Exploration, Drilling, Transportation, Manufacturing, Marketing and Foreign Operations, showing how each phase interweaves with the others, to total into an effectively functioning American business.

Sponsor: Standard Oil Co. (Indiana). 86 minutes — color — documentary.

amily scene from the Bay State surance educational film recent- produced for public showing.

nsurance Information Film ses a Fable, Fantasy Theme

Now You See It, a 16mm color ound motion film, produced for he Insurance Information Office f Connecticut, can be described s a fable of today designed for entertainment and education of the people of Connecticut.

However, it will be of interest to audiences wherever insurance plays a part in our modern economy, and that of course, is universal.

Although the basic theme dealing with the need for insurance is serious, the approach is gay and light-hearted. Aimed primarily at students, *Now You See it* employs an Arabian Nights fantasy technique to put across the message.

The story opens in a Connecticut town. An insurance agent, because of business, has to postpone taking his son to a marine museum. The boy, brokenhearted, rubs a small bottle with a ship in it and wishes there were no insurance business.

Presto! Insurance buildings disappear, building projects are halted, and everything affected by the investment of insurance dollars stops.

These sequences would present quite a challenge to any technical staff. If you would like to see how they were done, we suggest you write to Francis T. Ahearn, Insurance Information Office of Connecticut, 76 Farmington Ave., Hartford, Conn. for preview screening or outright purchase.

The film was produced by Bay State Film Productions, Inc.

"About Time" Bell's Latest Picture in Science Film Series

☆ The amazing story of man's struggle to tell time . . . from the sun dial to the atomic clock is the fascinating subject in the latest of the Bell System science films.

The film *About Time* was color telecast on February 5th over NBC-TV, and the usual widespread demand for public showing use is already building up.

Eighth program in the Bell System Science Series, *About Time*, one hour, is available on 16mm color film for classroom and group showings. Arrangements can be made with local telephone business offices.

This latest Bell science film, like earlier programs, was produced under the supervision of a board of distinguished American scientists.

About Time presents the complex subject of time and its measurement through the story of Planet Q, where the concept of time is unknown. When its king decrees that there shall be time

KALART VICTOR

MOVIEMATIC REPEATER PROJECTORS

PLUG IT IN AND IT'S READY TO SHOW

That's all there is to showing your 16mm sound films with a Moviematic Repeater Projector by Kalart/Victor.

No reels of film to thread. No separate screen to set up. No need to darken the room. This adds up to a new dimension of convenience in showing sound films when you use a Moviematic.

Moviematic Repeaters project your film from a power-driven magazine which eliminates threading and rewinding. Show the film once, and it's automatically rewound and ready for a repeat performance immediately.

Moviematics with built-in screen and repeater magazine are designed to help you tell your story anywhere —from the top of a prospect's desk to a counter at point of purchase. A wide range of models satisfies every requirement.

Projectors are available 3 ways: (1) for purchase, (2) for lease, and (3) for lease to purchase. Your needs can easily be met whether you need a single projector or a fleet. For complete information, including the name of your nearest dealer, write to Victor Animatograph Corp., Dept. 8T

New Driver Safety Film Previews in Washington, D. C.

☆ *The Sixth Wheel,* a new driver safety film in 16mm color and sound, produced by Sam Orleans Film Productions, Inc., Knoxville, Tenn., was recently premiered in Washington, D.C., at a meeting of the "Road Gang."

This group is an informal organization of executives affiliated with highway transportation and interested in furthering safe driving.

The Automotive Safety Foundation has approved *The Sixth Wheel* and is cooperating in bringing the film to the attention of people in the safety and highway transport fields.

* * *

Medical Needs of Aged Theme of New AMA Film

☆ The problem of medical care for the aged will be tackled by the American Medical Association in a 15-minute animated color film, *The Return of Horsehide Hooper,* being created by Animation, Inc., of Hollywood.

The film, scheduled for completion in March, will be shown on television and other screens across the nation.

John Stephenson is in the lead role of "Horsehide Hooper." Richard Reinauer, of AMA's public relations department, is supervising the production.

* * *

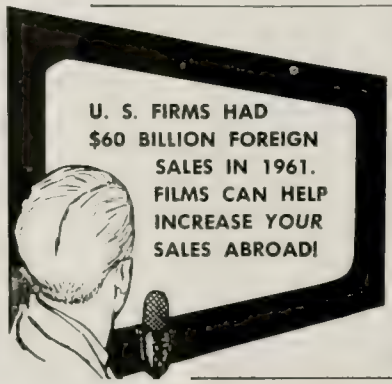
Centennial TV Series Made by the Agriculture Department

☆ A Centennial TV film series providing TV stations with an up-to-date look at today's agriculture has been produced by the U.S. Department of Agriculture.

The series will contain approximately 10 films designed to fit within a quarter-hour format, each presenting a different function of agriculture as it relates to every man, woman and child in 20th century America.

The series will include these subjects: marketing, forestry, farm programs and economics, cooperatives, extension service, wildlife, conservation and research.

In addition to the TV series, the Department's motion picture service is producing a 27½-minute documentary Centennial film—*Agriculture, U.S.A.*—the story of agriculture on the march, offered in blank verse narration and color. All of these films are on 16mm.



* * *

Football League Film Shows Sensational Plays in Action

☆ *Scouting Report,* a new 20-minute film reviewing sensational plays in National Football League games and the League's star players in action is now available on free loan from United World Films.

Chris Schenkel, sportscaster, narrates the film. Viewers will find it a helpful guide for fans on how to watch professional football with all its strategies, complicated plays and perfectly drilled maneuvers.

Over 2,000 Theater Bookings for IRS Short on Income Tax

☆ Now is *the* time for 1961 income tax schedules and, in keeping with this "season," the Internal Revenue Service reports that more than 2,000 motion picture theaters throughout the U.S. have booked the color featurette on taxes *Since the Beginning of Time*. The one-reel 35mm color production has been scheduled by both chains and independents in presentations "tied in" with the current income tax period.

Since the Beginning of Time, produced by Milner-Fenwick of Baltimore, acquaints taxpayers with the process through which their returns go after they are filed and with the character of work undertaken by several larger departments of Internal Revenue.

A "light touch" is maintained throughout, which, Internal Revenue officials believe, has contributed to its acceptance by the movie industry and the viewing public. It represents the first attempt by Internal Revenue to tell its story to the public through the theater medium.

In addition to bookings in the United States, the film has also been shown overseas, sometimes as an introduction to their efforts to model tax collection efforts along our lines, as well as for the benefit of American taxpayers abroad. The film has far exceeded the use and circulation originally envisioned by the Service.

* * *

Schools Get Tale of Shoes Via International Shoe Strip

☆ An educational aid for schools, International Shoe Company's filmstrip, *The Story of Children's Shoes*, has been distributed to some 2,000 schools, and is still going strong.

For the teacher, International's public relations department prepared a manual including expanded commentary.

An elf named Isco (initial letters of the company) is used in the film and manual to direct attention to subject matter.

Original photos were made by International personnel. Art work, animation and conversion in filmstrip was handled by the S ciety for Visual Education, In Chicago, which also arranged f school distribution.

Broadway Shows Via Closed-Circuit TV

Dynamic's Theater Network Holds Promise as Business Tool

A NEW CLOSED-CIRCUIT television system which made front-page news in New York last month may become an important communications tool for American business in the not too distant future.

After many months of planning, including an impressive "dry run" in a Broadway theatre last September, Dynamic Theatre Networks, Inc., has announced that it would begin operation of a closed television circuit between the Plymouth Theatre in New York and the 2400-seat Auditorium Theatre in Rochester, New York, on March 28.

"Gideon" on 20 x 15 Screen

Audiences in Rochester will pay $3 for orchestra seats, or $1.50 for balcony tickets to see performances of Paddy Chayefsky's Broadway play, *Gideon,* starring Fredric March and Douglas Campbell. These performances will be transmitted "live" from New York and will be shown on a screen 20 feet wide by 15 feet high.

No special lighting of the play will be required, nor any different staging. Sound transmission will be stereophonic. Equipment used is manufactured in England by Marconi Wireless Telegraph Company.

Dynamic Films' Subsidiary

Dynamic Theatre Network is a subsidiary of Dynamic Films, Inc., headed by Nathan Zucker and Walter Lowendahl. The company has thus far invested $300,000 in the project, which is called "theatervising", and it expects to invest several million dollars more in expanding the system to 24 cities by the fall of 1962 — and to 180 cities during 1963.

If a full network of theatres is to come into being, with established closed-circuit channels immediately and constantly available, the use of this communications facility becomes much more feasible for regular use by business.

System's Quality Very Good

When it is no longer necessary to assemble special networks, transport heavy masses of equipment, and transmit the closed-circuit program on a "custom-made" basis — as is the situation now — the system will become more reasonable and reliable and will be able to successfully offer itself for public relations, sales training, product introduction and many other uses — both "special" and commonplace.

The quality of the Marconi system —in both b/w and color — is extraordinarily good. In "theatervising", with low-intensity lighting on the stage, the televised image is bright and clear. With slightly brighter than theatrical stage lights, the picture closely approaches the best 35mm projected film image.

Dynamic Theatre Network has the full approval of all I.A.T.S.E. locals, and all operations are being carried out with I.A people.

* * *

Church Council Strengthens Cooperation With Film Media

☆The urgent need for cooperation with the motion picture, radio and television industries on the West Coast by major Protestant denominations is reflected in the strengthening of the National Council of Churches' West Coast office, according to Dr. Harry C. Spencer, chairman of the BFC board of managers.

Functions of the BFC West Coast were redefined following a study of the need for closer liaison with the industry, said Dr. Spencer, who is general secretary of the Radio and Television Commission of The Methodist Church.

New Approach After Decade

"This development represents a new phase in the Protestant approach to the industries which was first begun more than a decade ago," Dr. Spencer added.

Through its BFC West Coast office in Los Angeles, the National Council of Churches will carry out "dialogue between the Church and the industries." The Council will:

Develop program ideas for radio and television; maintain liaison with film makers and with the television and radio programmers and broadcasters; assist the denominations in their West Coast productions, and coordinate mutual interests among denominational representatives on the West Coast.

Will Handle All Services

BFC will also handle the distribution, promotion, utilization of audio-visual materials as well as broadcast training in the Western region.

Director of the BFC West Coast office is George Heimrich, a Lutheran layman. His operations are to be guided by a committee of from 27 to 32, members of which are to be drawn from denominations in the Los Angeles area.

SCIENCE FILMS:

(CONTINUED FROM PAGE 68)

are available on free loan from Bell Telephone Company offices.

Short Term Visual Memory (16mm, sound, black and white, 18 minutes) is the story of an experiment in visual perception recently conducted in the Visual and Acoustics Research Dept., Bell Telephone Laboratories.

Domain and Hysteresis in Ferromagnetic Materials (16 mm, sound, color, 36 minutes) discusses the theory of ferromagnetic domains and its relationship to hysteresis in magnetic materials. Actual motion pictures of moving domain walls are shown.

The films are designed for classroom use and contain no advertising.

New Formica Home Decor Film Released for Sales Promotion

☆ *Adventures in Home Decor,* a full-color 16mm motion picture, has been released by the Formica Corporation. The film is a 15-minute tour through modern idea rooms which feature widespread use of Formica laminated plastic surfacing.

Premiered to distributors recently, the film will be used as a major promotional vehicle, through women's clubs, service groups, student organizations and other consumer audiences. It also is adaptable to three segments of five minutes each for public-service television showings. Produced by Fred A. Niles Productions, Inc., Chicago, the film's bookings are handled by libraries of Modern Talking Pictures Service, Inc.

Builders Showcase Revamped, Shown on TV in 32 Cities

☆ *Builders Showcase,* in a new format for half-hour television in 32 major cities, will star Bill Yearout, noted TV personality.

Fred Olsen, producer, and president of Ray-Eye Productions, Inc., Kansas City, says *Builders Showcase* in its new format is "an authoritative and unbiased source of information on all aspects of homebuilding and home ownership." Facts on home financing, interior decoration, ideas for outdoor living are some of the subjects discussed in weekly programs.

Since its inception in Kansas City, where it has been aired continuously since 1956, *Builders Showcase* has made its debut in St. Louis and New Orleans. Dallas and Houston followed shortly. With the signing of U.S. Gypsum as national sponsor in 1961, the number of cities grew to 28 and more recently to 32.

* * *

Use Film and Data Processing To Study Auto Traffic Flow

☆ Motion pictures and high-speed data processing have been teamed up to study traffic problems on streets of Washington, D.C.

The National Bureau of Standards has programmed high-speed data processing and display equipment to simulate traffic flow over a nine-block length of a principal traffic artery in downtown Washington.

After information on volume of traffic and traffic controls has been fed into the system, the simulated traffic flow is tabulated on printouts and is also shown in a motion picture of simulated cars moving, changing lanes, and stopping for lights, as in a helicopter view of the actual streets.

This result has been attained in a three-year program conducted by the NBS data processing systems laboratory for the Bureau of Public Roads.

Trends in the BUSINESS of Audio-Visuals

Eastman's Sales, Earnings Reported Highest to Date

☆ Eastman Kodak Company's 1961 sales and earnings were the highest to date, and business was especially good in the fourth quarter, Dr. Albert K. Chapman, vice-chairman of the board, and William S. Vaughn, president, report.

Consolidated sales of the company's U.S. units last year totaled $989,171,969, almost five percent above the 1960 figure.

Net earnings were $130,203,447, or 2.5 per cent above the 1960 total. Earnings were equal to $3.38 per common share against $3.30 in 1960, based on 38,382,246 shares now outstanding.

* * *

Movielab Declares 10 Cents Dividend Plus 5% in Stock

☆ Saul Jeffee, president and board chairman of Movielab Film Laboratories, Inc., announced that the board of directors of the company have declared a cash dividend of 10 cents per share on its class A common stock, and in addition a five per cent stock dividend. Both dividends were paid Feb. 1, 1962, to stockholders of record on Jan. 16, 1962.

* * *

Audio-Visual Sales Rise Seen by Viewlex President

☆ Continued sales increase and a favorable outlook for 1962 was forecast by Louis A. Peirez, president of Viewlex, Inc., designer and manufacturer of audio-visual equipment.

Peirez attributed the favorable outlook to more industrial and commercial sales because of new products, increased use of audio-visual training in schools, and increased defense orders. Both sales and earnings for Viewlex were up about 20 percent in 1961 over the previous year.

Gevaert Announces Opening Of San Francisco Branch

☆ The Gevaert Company of America, Inc. announces the opening of a new branch office at 1485 Bayshore Blvd., in San Francisco.

Kent Rooks, northwest district manager, said the San Francisco branch will stock many of the company's photographic products and this should give advantages in product availability and speedy service to film clients.

Sign Pact for the European Marketing of Videotronic 8

European marketing of MPO's 8mm continuous motion picture sound projector, the Videotronic "8", will be handled by the existing network of Perma Film franchisers. An agreement has been

MPO President Judd Pollock (left) with Permafilms' Paul N. Robins.

concluded between Judd L. Pollock, President of MPO Videotronics, Inc. and Paul N. Robins, President of the film protection company.

Mr. Robins will make an extended European trip to introduce the projector to his franchisers. Both companies see a large market for the Videotronic "8" in the new economy of Europe. It is felt that the Common Market has made individual European businessmen more sales conscious than they have ever been. Emerging into mass distribution and keener product competition, such companies are being obliged to turn attention to new methods of marketing, advertising and sales promotion.

MPO reports that a score of U. S. companies have already contracted for the new Videotronic "8" to use in field operations.

Plastican Corp. Awarded U.S. Patent on Filmstrip Container

☆ A United States patent — #3,004,684 — was granted, last month, to the Plastican Corporation, Butler, N.J. for its 35mm film containers which offer several improvements over the standard "filmstrip can" of yesteryear.

Plastican containers are of lightweight but sturdy polystyrene construction with tight-fitting lids that are easy to remove. The container, itself, has a special patented "rim-indent" which permits the film to be lifted out entirely, instead of being unreeled loop by loop and thus scratched.

Colors offered are white, red, blue, clear, green, yellow, and black. Lid colors may contrast with, or match, container colors. Prices of the standard 1½ x 1½-inch size range from $2.25 for a box of 32 to $30 per thousand.

"THE INDEPENDENT"

To most people the word Telephone means Bell, but there are some 3500 Independent (*non*-Bell) Telephone Companies in the U.S., serving more than half of the nation's service area. This film is the story of a composite Independent, typical of many; a four-generation family business which has served its towns and farm country some 75 years.

Under the warm and even suspenseful story, the film projects a new understanding of these Independent companies to their subscribers, investors, regulatory bodies and, of course, their employees, present and prospective. There is real drama in the "cutover" sequence which gives the film its story thread and climax.

SPONSOR: U. S. Independent Telephone Assn. 28 minutes — Color—Dramatized photoplay.

IN OUR 17TH YEAR

Advertising: Builder of a Better Life

Economic Value of Advertising Explained in Good ANA Film

FOR THE PAST YEAR or so, Harry McMahan, an experienced and dedicated advertising man, has been giving an illustrated talk called *Advertising—What It Is Doing In Your Life*. In the talk, he explains the changing scene of the past 30 years — the improved living standards, the new products and new jobs, the transition from an economy of scarcity to one of abundance.

Through carefully selected films on commercial and public service advertisements, Mr. McMahan traces the story of advertising's spectacular contribution to our burgeoning economy and better life. And, he does it factually, dramatically and with good humor.

A Widely-Presented Talk

Advertising — What It Is Doing In Your Life has been presented before various groups and received everywhere with real enthusiasm. Advertisers and non-advertisers alike have requested copies of the script to take to their companies and communities for presentation before new audiences.

Following Harry McMahan's presentation to the Association of National Advertisers' Board of Directors at the Annual Meeting in Hot Springs, November, 1961, the ANA decided to convert the presentation into a film as a service to members and to the advertising community.

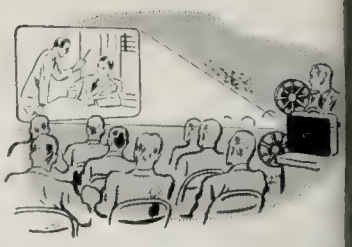
Produced by Fred Niles

The film, *This Is Advertising*, was released last month at several preview showings across the country. It is 27 minutes in running time, b/w, features TV announcer Joel Aldred (who donated his time and talent) and was produced by Fred A. Niles, Communications Centers.

The ANA says, in a pamphlet describing the film, that "We the communicators have not been telling our story to those who benefit most from advertising, the public. . ."

The film has been produced because the ANA hopes to help eliminate what the experts call "economic illiteracy." It says that the words and opinions of the prejudiced, the uninformed and the outright anti-business have found voice and repetition in high places, but we believe advertising to be good, not evil, productive not destructive.

Program Also Available "Live"



For those who would like to spread the message but prefer to do it "live", *This Is Advertising* also comes prepared as an illustrated talk with TV commercials provided, and each designed to drive home a point in support of advertising.

Max Banzhaf, Director of Advertising, Promotion and Public Relations, Armstrong Cork Company and Chairman of the ANA Government and Public Relations Committee, said at a recent preview showing: "ANA members have indicated they plan to make extensive use of the film before in-company audiences such as dealers and distributors, stockholders, supervisory personnel and others. Plans have also been worked out with the Advertising Federation of America to make it possible for each AFA Advertising Club and the clubs belonging to the Advertising Association of the West to receive a copy to use before audiences in their communities."

The AFA and AAW clubs have agreed to build an intensive program around the film and to make every effort to have it shown locally at schools, colleges, PTA meetings and before service clubs. Advertising agencies, media organizations and others are expected to make extensive use of the film.

Where to Obtain the Film

Prints of *This Is Advertising* are available from the ANA (155 East 44th Street, New York). The complete package includes the filmed version, separate filmed TV commercials on the same reel, a copy of the script including an introduction to the film, a fact book and the reel and can. The price to help defray production costs is $200 for the package.

Photographic Abstracts Journal To Be Published at Columbia

☆ Two major sources of photographic abstracts in the U. S. published by the Ansco and Kodak organizations (which currently are suspending publication) will be succeeded by a new journal, "Abstracts of Photographic Science and Engineering Literature."

This new journal will be published monthly in cooperation with the Society of Photographic Scientists and Engineers. It will carry a complete annual index of subjects, authors and patents.

The publication has been established in Columbia University's Department of Graphics of the School of Engineering and Applied Science. Plans call for the first issue to be out early in March.

VIEWPOINT

Paths Ahead for the Sponsored Farm Film

by Dana Bennett, The Farm Film Foundation

WHAT LIES AHEAD for the sponsored farm film?

The crystal ball indicates three major "musts" if such films are to continue to play an important role in rural America: (1) They must be aimed at an audience whose level of literacy is constantly advancing; (2) the story they tell must be much more sophisticated than in days of yore; (3) how-to-do-it films will continue in strong demand, but product-sell in them must be subtle and held to a bare minimum.

Here is the reasoning. Because of the technological explosion in agriculture, fewer and fewer people are producing more and more food and fibre. Every indication is that this trend will continue into the indefinite future. The result is larger and larger farms and ranches requiring greater and greater amounts of capital and buying larger and more expensive equipment. The folks operating these "factories-in-the-field" are college graduates, often with advanced degrees. They are top-grade people themselves; second-grade films aren't going to interest them.

It follows, then, that while the farmer of the last half of the 20th Century raises 100 bushels plus of corn per acre, he is quite as allergic to it in his films as are his professional opposite numbers in the city: A picture of a beautiful corn field, yes; the "Perils of Pauline," a thousand times, no.

As for the how-to-do-its, there will always be a real need and a big audience for such at the vocational agriculture high school, college and after levels. But superficial "quickies" in this department will do their sponsors more harm than good, especially if the advertising lads get in their wicked hands and insist on "hard sell" at every turn of the cam shaft.

So, the crystal ball shows a great future for farm films, *if* sponsors and producers keep up with their audience — which undoubtedly they will.

Premiere: New Films From Business

Right: At premiere of "Pithole, USA" are (left) Mr. J. Williams Hanmer, pres., Wilding, Inc. and (right) Michael F. Hazel, president, Oil Well Supply Div., United States Steel.

U.S. Steel "Brings Alive" an Oil Town in Documentary

☆ *Pithole, USA* produced for Oil Well Supply Division, United States Steel Corp., was press previewed in New York recently, and had its first public showing in Dallas, Tex., home of the Oil Well Supply Division, on February 13.

The birth, exciting life, and early death of the oil industry's first and wildest boom town is portrayed in this new motion picture short subject.

The 13-minute documentary uses the still-life-in-motion technique to "bring alive" the roaring activity that was Pithole, a town in northwestern Pennsylvania, in 1856-66.

Michael F. Hazel, new president of the Oil Well Supply Division, attended the film's preview. He noted that the story of *Pithole* is a little known segment of Americana and the subject is ideal for the Oil Well Supply Division's 100th anniversary celebration this year.

Produced for United States Steel by Wilding, Inc., New York, *Pithole, USA* will be exhibited in motion picture theaters throughout the nation.

* * *

Shell's 50th Anniversary Picture: "Top of a Continent"

☆ *Top of a Continent* is the Shell Oil Company of Canada's new film showing how man is meeting the terrific challenge of the Northwest Territories. It was premiered in Ottawa before the Prime Minister, cabinet and government officials.

Timed with the growing importance of the north, and meeting the keen interest in the growth of Canada, *Top of a Continent* is a story of a land in transition.

This is Shell's 50th anniversary film.

Top of a Continent dramatically illustrates the present-day development of the Northwest territories, the effects of this development on the native Eskimos and Indians, and highlights the promise this land, covering one-sixth of North America, holds for all Canadians.

The 16mm color film took over two years to make. Camera crews, working under extremely difficult conditions ranged more than 75,000 miles, mostly by aircraft, throughout Canadian Territories from Frobisher Bay in the east to Aklavik in the west. Over 15,000 feet of spectacular film was shot. This was edited down to the final 1,200 feet, running about 38 minutes.

Produced by Crawley Films Limited, the film is narrated by actor Lloyd Bochner. Original musical score is by Larry Crosley. The film is available to business and service clubs, schools, church groups and other such organizations. It can be borrowed free from Shell film libraries in Montreal, Toronto, Calgary and Vancouver.

* * *

Roundtable Film Softens Fear of Automation on Job

TITLE: *Overcoming Resistance to Change*, 34 min., either black & white, or color, produced by Roundtable Productions, 275 S. Beverly Drive, Beverly Hills, Calif. (Print Sale Only).

* * *

☆ This film is an answer to companies that have experienced serious morale problems and drops in efficiency following introduction of automated methods and other technological advances.

Dr. Oliver Fowler, Ph. D., management consultant, who served as technical advisor on the film points out: "Without change we could have no progress. Yet many people feel threatened by new job requirements or changes in their normal business relationships.

Facts Can Prevent Fears

"It is the purpose of this film to show how supervisors can present new methods or procedures to their men so that they will not be feared."

The film shows how managers can learn to understand and deal with resistance when it does arise.

Change Must Be Understood

Key lesson in the film is portrayal of how a supervisor learns that to overcome employee's resistance he must first be sure that the change is clearly understood. After that the supervisor must allow his men to release their tensions and then provide an opportunity for them to become identified with the change — to participate in it and contribute to it.

The film concludes as the supervisor deals effectively with each man until he finally creates an atmosphere in which the change is accepted and efficiency and morale again begin to rise.

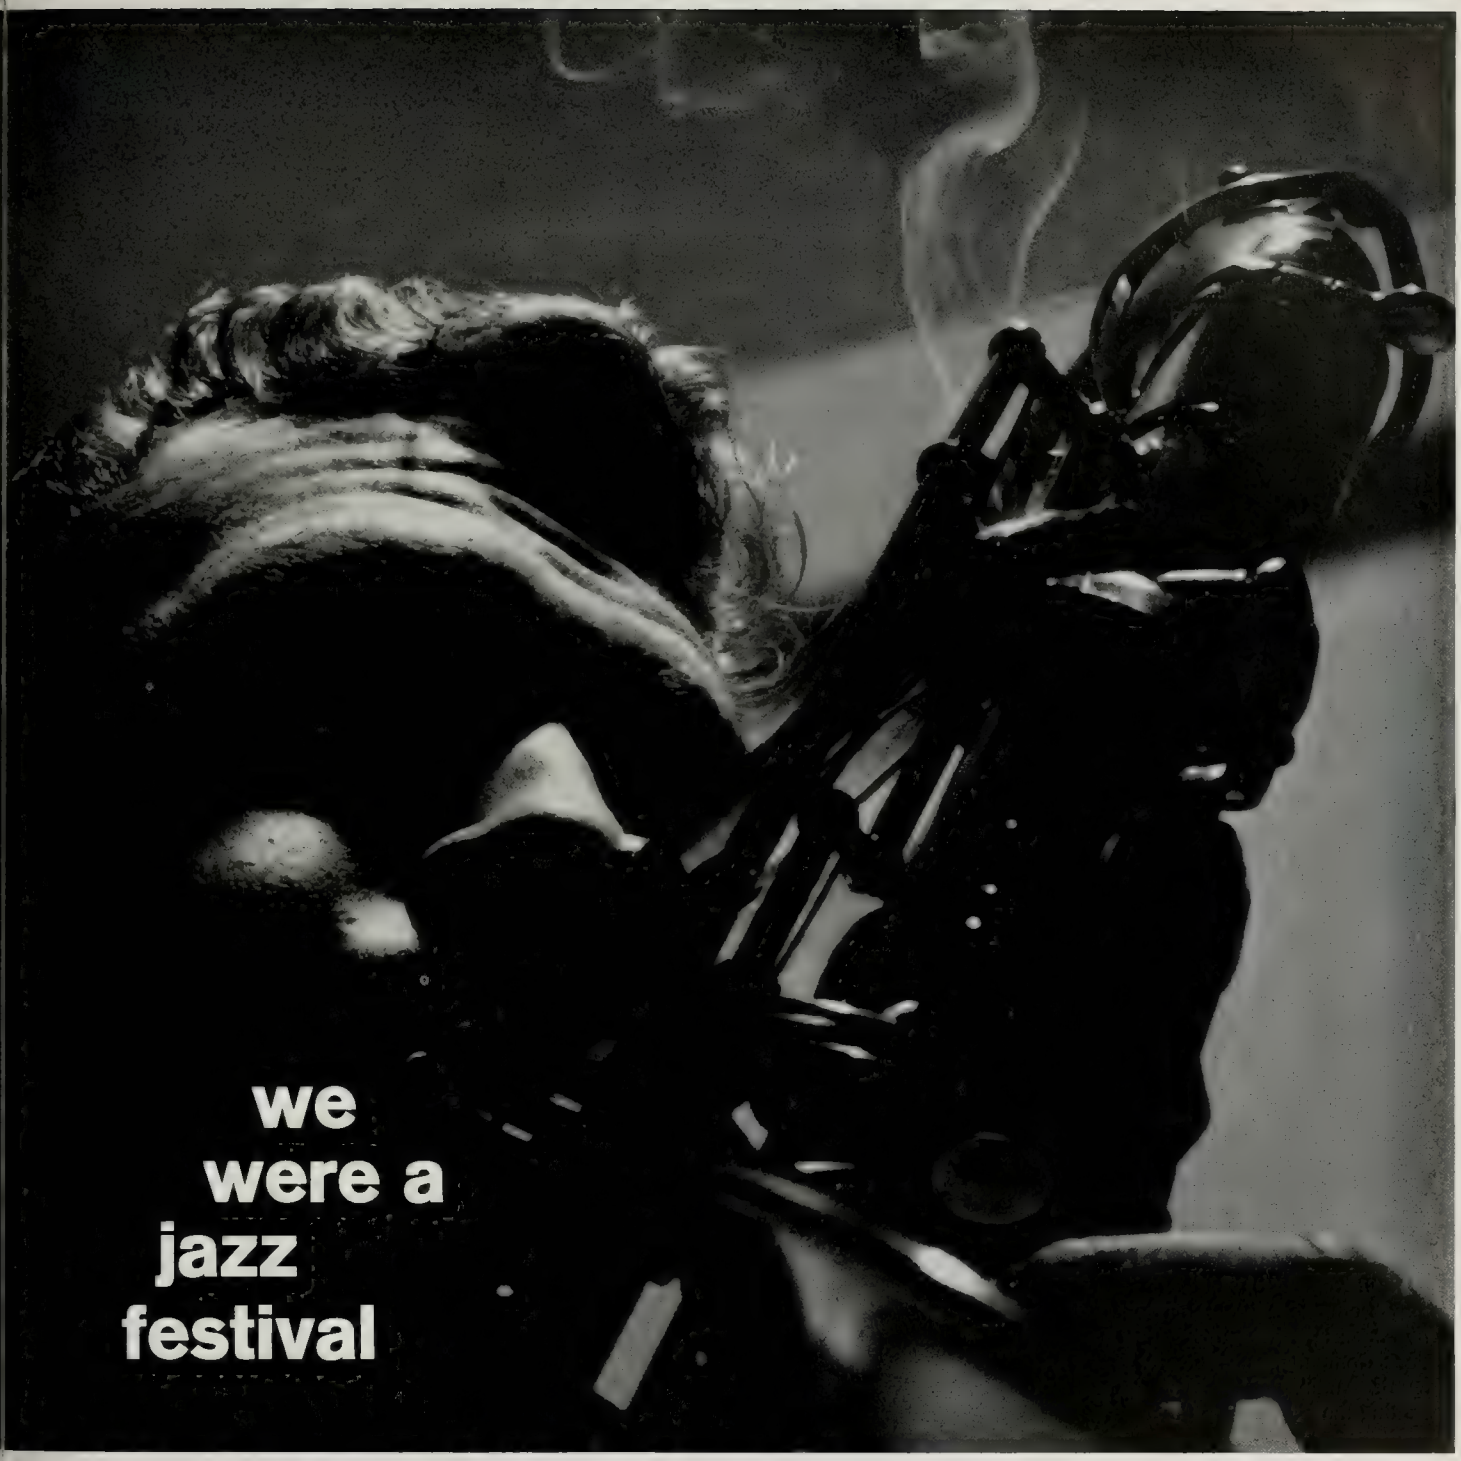
√ **An Association Tool!**



"THE COSTLY CROWD"

Like many upper-echelon business men, John Clayton thinks of this so-called population explosion as a good thing —although as chairman of his city's Forward Planning Commission, he recognizes that more people will need more civic expenditures. But, as he tells his wife, the increasing population will finance those things with increased income.

But then in a counterpoint pictorial sequence that will curl the hair of thinking citizens, he realizes the perilous truth. And unexpectedly, in the course of his work, he finds something he can do about it.

As a matter of fact we have been that and many other things . . . a soap, an automobile, a cigarette, an ice cream, an idea—you name it.

We have been all of these things because when we become your producer, we become you. Our concern with your problems is that detailed, that personal.

All our facilities, our skills, our imagination become a part of your organizational make-up to help you do a better visual communications job—and do it easier.

So if you're a soap, an automobile, a cigarette, an ice cream, an idea, or anything trying to get sold, we suggest that you strengthen your efforts with our production facilities and know-how. We'll make you a stronger you.

Furthermore, you'll find us nice people to work with. Over the past ten years others have found it that way and that's why they have repeatedly come back for more.

We'd like to show you some of the gratifying results.

Film Users, Producers Tell How to Get "Maximum Results from Business Films"

A Report on the ANA-FPA New York Workshop

TWO HUNDRED AND FIFTY film sponsors, producers and service industry people took part in a workshop on "How To Get Maximum Results From Your Business Films" organized by the Film Producers Association of New York with the cooperation of the Association of National Advertisers at the Plaza Hotel, New York, January 17.

Registrants — about 75 percent of whom were *users* of film rather than suppliers — heard the principal luncheon speaker, Roger W. Tubby, Assistant Secretary of State for Public Affairs, outline his views on "How Industry Communications Programs Can Support American Foreign Policy."

Show Techniques That Work

A series of panel, filmed and individual presentations by leading advertising and audio-visual executives demonstrated successful planning, budgeting, production, distribution and evaluation techniques now working for American business film sponsors.

Presiding Chairman for the day-long event was Willis H. Pratt of the American Telephone & Telegraph Company, and Chairman of the A.N.A. Audio-Visual Liaison Sub-Committee.

Robert Bergmann of Filmex, Inc. was head of the F.P.A. planning committee. Coordinator of the program was Wallace A. Ross, industry public relations consultant.

A Report on Film Budgets

A highlight of the program included the announcement of an A.N.A. report on budgeting of film productions presented jointly by Alden H. Livingston of the duPont Company, and Peter Mooney of Audio Productions, representing the F.P.A.

William Van Praag of Van Praag Productions, then president of the F.P.A., welcomed participants in the workshop, stressing the common interests of both users and suppliers in the business film industry.

The morning's program saw five representatives of major industrial and marketing concerns introduce clips from films which have been successful for them in various business situations.

Bruce E. Sturm, Director of Advertising and Promotion of Jantzen, Inc., presented *Once Upon A Smile*, produced by Elektra Studios, New York, to merchandise Jantzen's advertising campaign to its sales staff, dealers and the public.

Mr. Sturm said that his company had used the film and its elements in many ways. The music from the sound track has been used in advertising, art had been used in counter cards, and film, itself, had been featured in sales meetings, press shows, sales showrooms, for retail sales training and for special store promotions.

"Our Most Flexible Medium"

"Film is the most flexible medium we have," Mr. Sturm said. "We find it to be almost always appropriate and proper for dozens of applications — and we are finding new ones daily."

George Mosley, Vice-President of Joseph E. Seagram & Sons, introduced *We the Salesmen*, Seagram's 1961 national sales convention film made by Robert Klaeger for Transfilm-Caravel, as an illustration of motivating a company's sales force.

William Torpey, Advertising and Sales Promotion Manager of Remington Rand International showed *Remington 11*, made by Vision Associates, New York, to introduce the new Remington portable typewriter to 475 sales offices around the world — an example of film's assistance in expanding markets abroad.

Describes IBM Film Success

Jack Siegel, Manager of Film and Television News Activities for International Business Machines Corp., introduced *The Question Tree*, corporate relations film produced by Henry Strauss & Company, New York. The picture has received wide-spread theatrical and group showings as well.

Kenneth P. Donellon, of the Public Relations Office, Ford Motor Company, presented the 1961 Ford Introductory film, *Got To Be Made*, produced by MPO Videotronics, New York.

These and other business films were shown to workshop participants during a "Screen-O-Rama" portion of the program. (Automatic repeater projectors were set up in anterooms so that those interested could watch parts of all the films. Written descriptions of each film were provided.)

Each of the "Screen-O-Rama" pictures illustrated a specific business film use. Among them were productions made for Theo Hamm Brewing Company, Brunswick International, Gulf Oil, Volkswagen, Connecticut Mutual Insurance, Schering, Firestone, Esso, Grand Rock, and the Association of Better Business Bureaus.

A DIFFERENCE IN THINKING

Why do so many of the nation's largest companies have films created and produced in Lawrence, Kansas?

One answer is a fresh point of view.

The Centron staff works and lives in an environment close to the core of American life. The serenity of the location provides an ideal creative atmosphere.

The results are films in which the people, the talk and the backgrounds ring true. And the viewer feels comfortably involved.

This is one reason why firms such as Phillips Petroleum, Monsanto, Continental Oil, Buick, Carrier Corporation, McGraw-Hill; and such organizations as the American Medical Association, American Hospital Association, and others turn to Centron.

Centron's location at the hub puts the pictorial assets of the entire country within economical reach.

Audiences — anywhere — will identify with Centron films. And the ideas you want to put across gain reality.

Next time, call on Centron.

ANA-FPA WORKSHOP: FOCUS ON FILM RESULTS

(CONTINUED FROM PAGE 80)

Speaking at the luncheon meeting, Roger W. Tubby explained that the State Department has a rather low budget for informational material — $127,000,000 annually as opposed to the estimated $2 billion outlay of the Russians.

Films, and particularly films made by American business, are playing an increasingly important role in exporting a proper vision of America. The United States Information Agency catalog now lists 14,000 titles as being available for overseas use. Mr. Tubby asked businessmen to continue to support this program.

Asst. Secretary of State for Public Affairs Roger Tubby spoke on industry's role in foreign affairs.

Panel on Film Techniques

A creative panel of producers and service company members of the Film Producers Association responded to questions and demonstrated new trends in techniques involved in the writing, designing, scoring and production of films for industry, during the afternoon session. Panelists were Robert Bergmann, Filmex, Inc.; Frederick G. Beach, Remington Rand-Univac; Lee Bobker, Vision Associates; John Campbell, John Campbell Productions; Herman Edel, Music Makers; Irving Hecht, Cineffects; David Horne, Titra Sound; John Kowalik, Movielab; Joseph Swavely, Elliott, Unger & Elliot; and Nathan Zucker, Dynamic Films.

Peter Mooney, Treasurer of FPA, helped prepare and present report on budgeting of film productions.

A distribution panel of representative commercial film distributors, a sponsor with a broad distribution program and consultants to the film industry responded to questions covering the advantages to be derived from theatrical and television supplementary distribution at home and overseas.

The panel included Frank Arlinghaus, Modern Talking Picture Service; J. R. Bingham, Association Films; Ott Coelln, BUSINESS SCREEN; George Dorman, United States Steel Corp.; John Flory, Eastman Kodak Company; and Konstantin Kalser, Marathon International Productions.

The A.N.A.-F.P.A. workshop proved to be such a successful affair this year that both organizations now look forward to continuance of their cooperation.

Film distribution panelists (l to r): George Dorman, U. S. Steel; Frank Arlinghaus, Pres., Modern Talking Picture Service; John Flory, Eastman Kodak; Konstantin Kalser, Pres., Marathon Intl.; Ray Bingham, Pres. of Association Films; moderator Ott Coelln, Publisher of Business Screen.

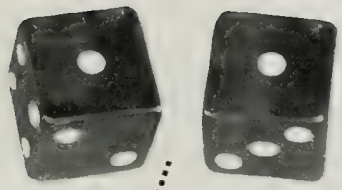
√ Employee Morale



"THE FILE ON HENRY ROYALL"

Many men who "didn't hire out to be salesmen" today are finding themselves expected to go outside and "call on trade." This film is designed to make these men realize that selling is essential to their jobs in today's competitive world . . . that despite their non-extroverted personalities, they *can* sell . . . and to implement their hoped-for attitude change by teaching them the simple secret of making pleasant and successful calls.

Unusual ingenuity was utilized to bring in color, action, humor and suspense and yet stay true to the subject. Features Parthenon's TRIA SCOPE technique (live action in an impressionistic environment) and several other novel cinematic approaches.

NVPA Prepares for 9th "Day of Visuals"

THE NATIONAL VISUAL Presentation Association is now accepting entries for its Ninth Annual Awards Competition to determine prize-winning visuals of 1961. The Award presentations will be part of the Association's *Day of Visuals*, to be held on June 4th and 5th at the Roosevelt Hotel, New York.

The purpose of N.V.P.A.'s Awards is to provide the means for recognition of outstanding examples of visual presentation and to provide an incentive for constantly improving the visual image. The owner (sponsor), or producer, of any visual presentation prepared in 1961 is eligible to place as many entries as he wishes in the competition.

Three Types of "Visuals"

For the purpose of the competition, visuals are classified into three types: (1) motion pictures; (2) filmstrips, slides and overhead projection transparencies; and (3) flannel boards, flip charts and other non-projected visual presentations.

Entries of these types can be made in any of six awards classifications: (1) industrial sales and sales promotion; (2) consumer sales and sales promotion; (3) general public service; (4) sponsored educational; (5) employee relations; and (6) employee training.

Focus on How It Worked

Judging will be based primarily on how successfully the visual accomplished the communication job it was designed to do. Qualified and authoritative specialists from within the audio-visual field will serve as judges of the three types of visual in the six classifications. The judges will work with an Executive Judging Committee composed of Selwyn Robbins, Manhattan Color Laboratories, Inc., Chairman; Janet Wilkins, National Association of Manufacturers; Harold Klein, Film Producers Association; and Bob Seymour, BUSINESS SCREEN.

NVPA General Chairman Bernard Barnett lends a hand with plans.

Official entry blanks are available by writing to National Visual Presentation Association, 19 West 44th Street, New York 36. Entries will be closed on April 15th.

It is expected that preliminary judging will be completed by May 7th, and final judging will take place during the week of May 14-18. Final judging sessions of the competition will be open to all interested individuals, and especially to entrants with visuals being judged. They will be notified of times and places of these final judging sessions.

Chairman Selwyn "Chuck" Robbins

N.V.P.A. is now also accepting orders for exhibit space at the Ninth Day of Visuals. This annual audio-visual conference and exhibit is held in conjunction with the Sales Executives Club of New York and will be attended by key executives in the sales, advertising and marketing departments of leading consumer and industrial product companies concerned with audio-visual activities.

Theme of This Year's Show

The theme of the Ninth Annual Day of Visuals is "The Promise and Purpose of Visual Presentation." The committee in charge of the event consists of: General Chairman, Bernard Barnett (I.B.M. Corp.); Program and Seminars, Robert Yung (Elektra Studios); Awards Competition, Selwyn Robbins (Manhattan Color Labs); Awards Banquet, William Connelly (Union Carbide); Exposition, Leonard Rogers (L. Rogers, Inc.); and Publicity and Promotion, William Weltman (Marwel Advertising).

Below: Visuals' judge Joe Kilmartin (MPO) with Asst. Chairman Harold Klein, N. Y. Film Prods. Assn.

PRODUCTION EXECUTIVE

Presently employed by major motion picture company desires to make change. Thoroughly familiar with all phases of motion picture production. - Travelogue

"HAPPY HOLIDAYS . . . in the LAND of LINCOLN"

Believe it or not, this is a new approach to the old reliable Travel picture. New cinematically: also new in its merchandising approach. Not a guide-book (sponsor's roadmap will cover that) but an exciting and actionful sampling of the kinds of real fun (and self-improvement) that people can enjoy in their own home areas.

Cinematically, it's a "participating" kind of movie, where the audience climbs right into the action and *does* things, and the constant accent is on the *people*. First film of a series.

Sponsor: American Oil Company. 28 minutes — color — unconventional narration technique.

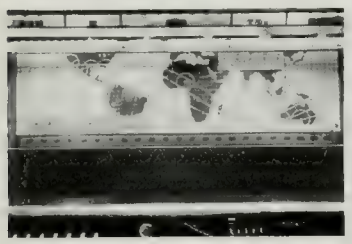
PRINCETON, NEW JERSEY

MOTION PICTURE PRODUCERS & DISTRIBUTORS SINCE 1941

"MUST VIEWING" FOR EXECUTIVES



"Wheel of Dodge" One hour, 40 minutes, Color. Produced for the Dodge Division, Chrysler Corp.

• This film introduced the 1962 line of Dodge products to dealers, salesmen across the country. It is first a composite of scenes and of sounds symbolizing 44 years of progress and development since 1914. On this background, 1962 products were revealed out of a Kaleidoscope, symbolic of changing, re-arranging patterns of today's American markets.

Write or call: Alexander Film Co., Colorado Springs, Colorado.

"A Voice for Mercury" 15 minutes, Color. Produced for the Western Electric Company.

• Shows the vital role of communications in every phase of Project Mercury, from testing through final flight. "On the spot" sound gives audiences a feeling of orbiting the Earth as an Astronaut would experience it.

"Take Time for Your Teeth" 15 minutes, Color. Produced for Johnson & Johnson.

• Neat solution to the problem of product sell to teen-agers without offense to educators. Approved by the American Dental Association. Alexander Scourby leads his young audiences through series of interesting live, animated sequences, to decision for better dental care.

Write or call: Audio Productions, Inc., 630 Ninth Avenue, N.Y. 36.

"Cause Undetermined" 18 minutes, Color. Produced for the Electric Council of New England.

• This graphic reminder to electric utility workers that good safety habits are vital to everyone working with electricity won the top award (in 1959) of the National Committee on Films for Safety. Theme, dealing with carelessness brought on by long experience, is pertinent to all types of occupational safety.

"Now You See It" 24 minutes, Color. Produced for the Insurance Information Office of Connecticut.

• The meaning of insurance to every day economy is brought to the screen in a new, refreshing style. Amusing handling of the Alladin fable in 1962 style as everything affected by insurance is whisked off the screen by a boy's whim.

Write or call: Bay State Film Productions, 35 Springfield Street, Agawam, Massachusetts.

"Office in the Sky" 28½ minutes, Color. Produced for United Air Lines.

• Film story centers on cockpit of modern jet transport as it details care which United uses in selecting, training and maintaining the proficiency of its pilots and its flight engineers in a program continuing as long as they fly. Notable for its outstanding aerial photography.

Write or call: Cate & McClone, 1521 Cross Roads of the World, Hollywood 28, California.

"Yosemite Is My Home" 29 minutes, Color. Produced for Yosemite Park & Curry Company.

• The beauties of Yosemite National Park, all 1189 square miles of it through the complete cycle of the seasons are shown through the eyes of a National Park Service Ranger. Behind this sheer beauty, a deeper purpose, revealing how the Park Service and commercial operators work hand-in-hand to serve a constantly-increasing number of visitors while protecting, preserving natural beauty of the Park.

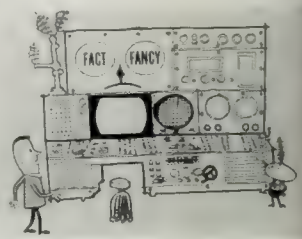
Write or call: Cate & McClone, 1521 Cross Roads of the World, Hollywood 28, California.

"I Am a Doctor" 26 minutes, Color, Produced for the American Medical Association.

• An open letter to young people interested in medicine as a profession is dictated by the doctor-narrator of this film as he gives them facts about the abilities, character traits required and the scope, comparative difficulties of a medical education. He also tells the rewards as many fields of medicine are depicted. Winner of a Blue Ribbon Award, American Film Festival.

"If You Ask Me" 22 minutes, Color, Produced for the Phillips Petroleum Company.

• Title points to film's stress on the many services, many items of merchandise needed by the average motorist. Sales tips are demonstrated by dramatized episodes out of actual reports in company's files.



Write or call: Centron Corporation, West Ninth at Avalon Road, Lawrence, Kansas.

"Laurie Learns a Secret" 20 minutes, Color. Produced for the American Dental Association.

• A teen-ager beset by "growing-up" problems learns the value of proper dental care. Film was produced as major weapon interesting youngsters in war on peridontal disease.

"Theobald Faces the Facts" 13 minutes, Color. Produced for National Woman's Christian Temperance Union.

• Through humorous, animated cartoon-style antics of Theobald T Throckle and "Orbie" from outer space, plus a "Fact or Fancy" machine, youngsters learn basic facts about the effects of alcohol on the human body.

Write or call: Cal Dunn Studios 141 West Ohio, Chicago, Illinois

---

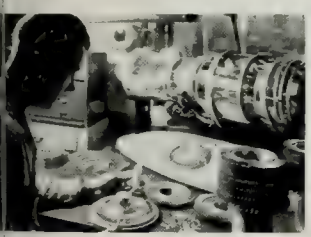
"Anatomy of An Accident" 26½ minutes, Color. Produced for the American Tel. & Tel. Company.

• Featuring a very realistic car and truck smash-up, this film is an analytical study of a common accident: the steps that lead up to it how it happened, and its tragic aftermath. Through this "defensive driving" story, recognition of the steps will prompt more drivers to avoid them.

"Guardian Maintenance Works Both Ways" 27 minutes, Color. Produced for General Motors Corp.

• A thoroughly-entertaining training film too limited by its purely internal audience. Jim Backus tries to get his car serviced and the results are both helpful and hilarious.

Scene in "Guardian Maintenance"



ite or call: Jerry Fairbanks Pro-luctions of Calif., 1330 *No.* Vine Hollywood 28, Calif.

e Magic Hands of AMF" 22½ inutes, Color. Produced for erican Machine & Foundry Co.

he objective of this film is to w the wide diversification of F; it pictures the many and ied products turned out by AMF-le machines and processes. ws how new sequences can be ed as company developments ate events.

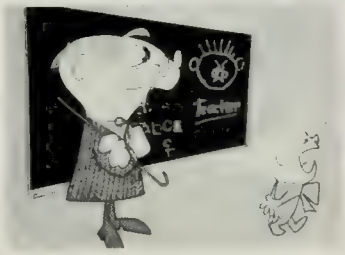
stman 910 Adhesive" 20 minutes, & w. Produced for Eastman mical Products, Inc.

Objective of this film is to intro-e unique industrial adhesive to ineers, designers, managers. Ad-tages and properties of product featured in dramatic sequences. w-to-do-it" sequence at end ex-ns methods of application.

ite or call: Farrell & Gage Films, nc., 213 *E. 38th St., New York.*

urney to the Stars" 12 minutes, 0mm Color. Produced for the ing Company.

here's only one way to see this (70mm) animated color film of pace voyage. It was filmed and be projected with the world's est and widest-angle lens on the ld's largest Cinerama screen at Seattle World's Fair as part of United States Science Exhibit. *rney to the Stars* utilizes anima-and stop-motion photography portray a realistic trip through r space. Fine Arts Productions, lywood, won this assignment.



"A Stitch in Time" 18 minutes, Color. Produced for the Illinois Bar Association.

· This film shows how regular consultation with your lawyer avoids legal disputes; points out that "check-ups" by your family lawyer help keep affairs up to date in an ever-changing world.

Write or call: Horizon Productions, 301 W. 73rd St., Kansas City, Mo.

"A New Look at Schools" 16 minutes, Color, Sound Slidefilm. Produced for the Southern Gas Association.

· Produced to help members of the Association present a new concept in school design and construction to school board officials and the general public. Educational methods of ancient times build up to complex modern-day demands. Compact buildings powered by a gas turbine furnish a good answer.

"Copper-the Oldest Modern Metal" 28 minutes, Color. Produced for Phelps-Dodge Corporation.

· New technology and uses of copper required an up-dated picture to replace an earlier title which was one of 10 most popular films in the U. S. Bureau of Mines library. Role played by copper in technological processes and modern methods of mining, processing are explored through brilliant color photography at many locations.

Write or call: Jamieson Film Company, 3825 *Bryan, Dallas, Texas.*

"Unseen Harvesters" 28 minutes, Color. Produced for E. I. DuPont de Nemours, Inc.

· The world's need for abundant food to feed exploding populations depends in strong measure of the work of the agricultural chemist. This film shows development of a new farm chemical; clarifies and dramatizes contributions made by science to agriculture.

"Dialogue With Life" 26 minutes, b&w. Produced for the Health Insurance Institute.

· A gripping documentary picture, filmed on location in modern U.S. hospitals, doctors' offices. Shows rapid strides made by medical science since the 30's . . . research, drugs, types of surgery, equipment and hospital facilities have extended the life span.

Write or call: MPO Videotronics, Inc., 15 East 53rd St., New York.

"All About New York" Produced for The New York Telephone Co.

· A very colorful, far-ranging biography of a fascinating state as its history comes to life, revealing the meaning of its well-deserved contemporary title: "The Empire State."

"He Didn't Have Time" Produced for The Firestone Tire & Rubber Company.

· This motion picture was made to show on repeater projectors in all Firestone Stores to customers who "happened in" for any reason. It had a difficult task: first, to get attention; then *sell* the potential buyer a premium quality tire for which he would not admit an immediate need. A dramatic, effective sales story was the result. This film did *sell* those tires!

Write or call: Owen Murphy Productions, Inc., 723 Seventh Avenue, New York 19, *N.Y.*

Never thread a sound head again! Slide film into the convenient diagonal slot. Flip a single lever. Film is positioned, sound loop formed and sound head threaded—all instantly, *automatically!*

ALL NEW, THE MANY Galaxy features include an exclusive high-intensity lamp. Internal dichroic reflector eliminates light-absorbing, dust-catching condensers and external reflectors, and reduces heat on the film a full 50%!

Only Galaxy gives you the advantage of a unique new high-intensity lamp. Through push button controls two-levels of illumination are provided—"Normal" and "Hi." At "Normal," equivalent to 800 watts, lamp life is extended 10 times—to a minimum of 150 hours. For long auditorium throws, to bring life to dense prints, or for projection with a minimum of room darkening, the "Hi" setting delivers the equivalent of 1200 watts, a brilliance surpassed only by carbon arcs. For the finest sound in 16mm, Galaxy introduces an exclusive hiss-free phototransistor pickup. Plus a full 15-watt transformer-powered high-fidelity amplifier and removable speakers. For the first time you are provided with separate controls for bass and treble, for new richness in music, new clarity in speech, new quality in sound.

Fast and easy to set up and rewind, with exclusive push-button control, Galaxy is simpler, smoother, and quicker in operation than any other. Arrange with your Graflex AV dealer for a demonstration of its new exclusive advances in projector performance —or write to Graflex. **GRAFLEX**®

"MUST VIEWING" FOR EXECUTIVES

A 5-point plan for effective communication is given.

Write or call: Henry Strauss & Co., Inc. 31 W. 53rd Street, N. Y. 19.

"The Institute Story . . . a Down to Earth Report" 15 minutes, Color. Produced for The Institute of Life Insurance.

• This filmograph (still-technique motion picture) treatment uses a modern art technique to show how effective public relations activities are creating a more favorable climate for life insurance. The Institute's role in getting this to the public on behalf of member companies is outlined.

"Million Dollar Merchandising" 17 minutes, Color. Produced for Lever Brothers Company.

• A revolutionary new concept in merchandising was developed by this sponsor: a one-million dollar contest. To promote this gigantic event, Lever had to reach *all* supermarket buying committees; had to do the job in a *very short* period of time to maintain contest security right up to announcement date. An example of the kind of job films like this do so well.

Write or call: Visualscope, Inc., 103 Park Avenue, New York 17.

"The Computer Comes to Marketing 30 minutes, b&w. Produced for Fortune Magazine.

• Another very timely picture introduces possible marketing applications of electronic data processing systems, computers, etc. Fundamentals of uses of computers are explained, to motiviate top management to think more creatively about the uses of computers in their own businesses. *Must* viewing.

"Libya Ahead" 28 minutes, Color Produced for the Ohio Oil Co.

• Like many of the films in this special selection for our executive readers, *Libya Ahead* was featured in a earlier issue. In this new, small world, the activities of America business in lands abroad are shown in this outstanding example of th Libyan oil exploration and discovery. The film is also a story of Liby itself, of people, cities, history an modern development . . . oil is hav ing its affect on many elements.

"Salesmanship — A Rewarding Career" 34 minutes, b & w. Produced for the Ford Division, Ford Motor Company.

• Three top salesmen (appliance insurance, encyclopedias) discuss why they entered the selling field what they consider most important in making a sale, how selling has affected their attitudes, financial positions, and their lives, and why they think selling is most rewarding.

Write or call: Wilding, Incorporated 1345 Argyle Street, Chicago 40

Your Best Source for FILM PRODUCTION

Alexander Film Co. is your ONE source for ALL creative and production services: Television and Theatre Screen Commercials, Long-Length Motion Pictures, Slide Films. The 24-acre Alexander studio-city houses every facility, every film production need . . . script creation, stage production, art, animation, black and white and color processing, sound recording. You deal with only one supplier.

And in colorful Colorado all outdoors is your stage, with 300 days of sunshine every year, breath-taking mountain scenery, plains and farming country . . . all within 30 minutes drive of the Alexander studios. But, if your requirements are for other locations, remember this: Alexander goes anywhere!

AMA Journal Prints 1000th Medical Motion Picture Review

☆ Medical film reviews in the American Medical Association's JOURNAL, covering a period of 16 years, reached a milestone with the recent publication of the 1,000th motion picture review.

Information on new medical motion pictures has been valuable to medical educators and program chairmen in planning state medical society meetings and hospital staff conferences.

The AMA maintains a film library of 1,253 prints of 268 different subjects. In 1961, the library booked a total of 10,025 showings of medical motion pictures, an increase of almost 14 percent over the previous year.

Reprints in booklet form of reviews published from 1955 through 1961 are available on request from the Department of Medical Motion Pictures and Television, AMA, 535 N. Dearborn, Chicago 10, Illinois.

AMA's film service program is supervised by Ralph Creer, former director of the Medical Illustration Department of Yale University's School of Medicine.

PARTHENON PICTURES
HOLLYWOOD

In 1954 some men who had worked together informally in Hollywood went into business films full time under the new name of Parthenon Pictures. The group has grown, but the policy was then, and is now, to make a limited number of pictures of unusual quality — and over these seven years the client family has come to include the following:

AMERICAN OIL COMPANY
AMERICAN PETROLEUM INSTITUTE
AMERICAN TELEPHONE AND TELEGRAPH CO.
BAXTER LABORATORIES
BELL TELEPHONE LABORATORIES
BENDIX AVIATION
THE BORDEN COMPANY
CAMPBELL-EWALD COMPANY (CHEVROLET)
CANADIAN BROADCASTING COMPANY
CARNATION COMPANY
CONNECTICUT GENERAL LIFE INSURANCE CO.
DOUGLAS AIRCRAFT CO.
ERWIN WASEY, RUTHRAUFF & RYAN
GENERAL DYNAMICS ASTRONAUTICS
GENERAL MOTORS-CADILLAC DIV.
GRIT PUBLISHING COMPANY
HILTON HOTELS
INTERNATIONAL BUSINESS MACHINES
INTERNATIONAL HARVESTER CO.
KAISER ALUMINUM & CHEMICAL CO.
MARQUARDT AIRCRAFT
MINNEAPOLIS-HONEYWELL CORP.
MOBIL OIL CO.
NATIONAL PIANO MANUFACTURERS ASSN.
PLANNED PARENTHOOD ASSN.
PUREOIL CORP.
SECURITY FIRST NATIONAL BANK
STANDARD OIL CO. (INDIANA)
SUNDSTRAND TURBO
U.S. INDEPENDENT TELEPHONE ASSN.
WESTERN ELECTRIC COMPANY

Parthenon has a phobia—it is firmly resolved not to grow. The company solicits only the pictures that can be honestly handled with full attention by its key staff. The 1962 schedule includes some of the most interesting projects we have ever been privileged to produce.

Cinematographers Honor a Film Pioneer

Elect Frank Zucker as Vice-President of New York Local 644

☆ Frank Zucker, president of Camera Equipment Company, has taken on a dual role as a new vice-president of Local 644, IATSE, the New York Cinematographer's local.

Mr. Zucker, an organizer of 644 and a former president in the early days, was elected by a large majority in a surge of popular sentiment indicated by a write-in vote in the local's recent election.

Began His Career in 1914

Mr. Zucker has had a long career in the motion picture industry. In 1914 he got a job as a cameraman in the World Film Studios at Fort Lee, New Jersey. Four years later the Warner Brothers asked him to go to the West Coast as head cameraman for their young studio. He later returned to New York, where he was director of photography on films made by Marion Davies and Alma Rubens.

In 1922, Mr. Zucker went to Russia and Siberia to make a documentary film for Florenz Ziegfeld. When he returned he was hired by Technicolor to participate in some of the industry's earliest color film experiments.

Worked on First RCA Sound

In 1929, Frank Zucker worked for RCA on its sound-on-film Photophone System. But he never lost sight of the fact that he was a working cameraman. He shot films starring W. C. Fields, and some 15 musicals on the Universal lot.

Mr. Zucker organized Camera Equipment Company in 1936. Now it has grown into one of the best known manufacturers and distributors of quality photographic equipment in America. Thus, Frank Zucker has come full circle by again diving into the complex affairs of Local 644.

"When you consider that the pay for a professional cameraman used to be $15 a day, you can appreciate how far we've come," Mr. Zucker says. "Today, our men are skilled pros and command respect. I hope to give the union the benefit of my long business experience. But most of all I stand ready to consult with any member about his own working problems. He is still my first interest. My time and my advice are his for the asking."

Kodak Budgets $71 Millions for Capital Expenditures in '62

☆ Eastman Kodak Company will spend about $71,500,000 during 1962 for additions, replacements, and improvements in its U. S. facilities, it was announced by Thomas J. Hargrave, chairman, and William S. Vaughn, president.

This capital expenditures budget is slightly above the approximately $70 million spent last year. In the past five years, Kodak has invested about $312 million in capital improvements.

STOP! LOOK! LISTEN!

AMERICA'S RAILROADS LOOK GOOD

in Robert Yarnall Richie's

"Science Rides the High Iron"

NARRATED BY
CHET HUNTLEY

The nation's top security analysts are taking a new hard look at the future of America's railroads since they saw "Science Rides the High Iron" — a 25-minute color film produced for the Association of American Railroads.

What they saw was a factual, convincing story of how railroads working hand-in-hand with scientists and engineers, are keeping in the forefront of America's march to the future.

Whether you want your story to reach the security analysts, members of Congress . . . the general public . . . or special audiences . . . let us show you how we can produce a film tailored especially to meet your needs.

Write, 'phone or wire Robert Yarnall Richie today and arrange for a private screening of this outstanding new film. It will show you why more than 300 leading American companies have entrusted their most special assignments to us over the past 20 years.

When You Rent from F&B
EQUAL IMPORTANCE...EQUAL PERFECTION

This inexpensive splicer is an important item in our Rental Department. Your precious negatives will be spliced in it. If the splices don't hold, your pictures may be ruined.

When you rent a Griswold Splicer from F & B, it is **perfect** and your pictures will be too.

This is the most expensive and important camera in our Rental Department. Your entire production depends on the film which has run through this camera. The BNC Mitchell has thousands of precisely machined mechanical and optical parts. If any one of them does not function perfectly your picture may be ruined.

When you rent a BNC from F & B, it is **perfect** and your pictures will be too.

Perfection is a quality of all of F & B's Rental equipment...cameras, lenses, sound recorders, Moviolas, lighting equipment—or whatever.

We've told you F & B's rental equipment is MORE RELIABLE. It didn't just happen...we planned it that way. It takes a corps of top technicians, fine tools and precision machinery to properly maintain all this equipment; plus our determination to insure that F & B Rental Equipment is more reliable!

Here we show you Dom Notto, our Chief Engineer, and a portion of our Camera Room and staff. Our other Rental Departments include Sound Equipment, Lighting & Grip Equipment, Editing & Projection Equipment, as well as a fully equipped Machine Shop and Service and Repair Shops for all departments — staffed by 31 experts, technicians, and other personnel — all at your service.

Write for complete catalog of rental equipment

tional Safety Contest Draws Record mber of Entries; Winners Next Month

Bill Englander, active secretary of the Naional Committee on Films for Safety, phoned to report that this year's contest entries (70) s a new record and to tell us he'll have the ms of the winners in time for Issue Two in ril. This is by all odds the most-competentlyjudged of all award events with experts in ery field of safety making the important final sections for plaques and certificates.

Chicago TV License Renewal Hearings Share Spotlight With Approval of Pay-TV

☆ Television is making news and having its problems. Testimony on the public service contributions of both NBC' and CBS' Chicago TV stations are currently making news as FCC Commissioner Lee hears complaints *and* the plaudits at special license-renewal hearings in that town. And the U. S. Court of Appeals has upheld the authority of the Federal Communications Commission to permit trial operation of pay or subscription television systems. The test case came on an FCC grant to the RKO Phonevision Co. to conduct a three-year trial of the new type of service in Hartford, Conn. The system would be set up by Zenith Radio Corporation, who pioneered the Phonevision system and whose film (by Audio Productions) made news several years ago. It's been a long battle but Zenith now says it is proceeding with its original plans to start the Hartford experiment on June 1.

The Third International Industrial Film Festival

BERLIN, GERMANY . . . SEPTEMBER

☆ Through the patronage of the Council of European Federations of Industry, the Third International Industrial Film Festival is scheduled to be held in West Berlin in September, 1962. Last year's event, in which U.S.-sponsored business films won top honors, was held at Turin, Italy.

Selections of outstanding U.S. films are expected to be made again this year by the National Association of Manufacturers, who were invited to undertake this task by the European Council. CINE will also aid in this effort. The 1963 Festival has been set for Barcelona, Spain. A different "host country" is named every year. A Grand Prix is awarded the nation with the largest number of category winners at each Festival.

Dr. Raymond Fielding, President of the Industry Film Producers Association, has announced the selection of BUSINESS SCREEN as official journal.

Nominees for Overseas Film Festivals Being Screened by Regional Committees

☆ Regional screening committees, set up by CINE (The Committee on International Non-Theatrical Events) are currently viewing the many motion pictures submitted by sponsors and other sources for possible submission to this year's overseas film festivals. Selections are to be completed by April 1 for the final screening in Washington, D. C. by the full Committee. See other pages of this issue for details on CINE membership and overseas events.

Peter Rigg to Report International Film Events as New Member of Our Staff

☆ While we're on the subject, we've added a new roving correspondent whose future assignments will largely cover the international film scene but who is currently on an extensive tour of the U. S. Our new man-at-large is Robinson P. Rigg, who has the distinction of being the only industrial film columnist for an important daily newspaper. Peter Rigg does this stint for the LONDON FINANCIAL TIMES, is the former Editor (and founder) of England's INDUSTRIAL SCREEN, and also covers the European Continent during the year.

He'll represent us at the 3rd International Industrial Film Festival coming up in West Berlin next September, will also visit sponsors and producers in that country, France and Italy during the year. Meanwhile he's doing a "visitor's-eye-view" of the U.S.A. while in this country and will also cover the Seattle World's Fair and other events for us in the weeks ahead. Welcome aboard, Peter!

we dedicate this 12th review . . .

to the richest heritage of any industry . . . those men of integrity and vision who give stature to all who serve with them and to those whom they serve. Jamison Handy has devoted 50 years, nearly all of his professional and private life, to the improvement of the arts and science of communication on behalf of his fellow man. He has "shared the vision" with thousands who have worked with him and he has implanted responsibility among his fellow professionals through his credo: "without prejudice as to method." He has also brought countless innovations to these media since the day, five years before World War I, when a young newspaper editor turned to the film as a means of "helping other people get their good ideas across."

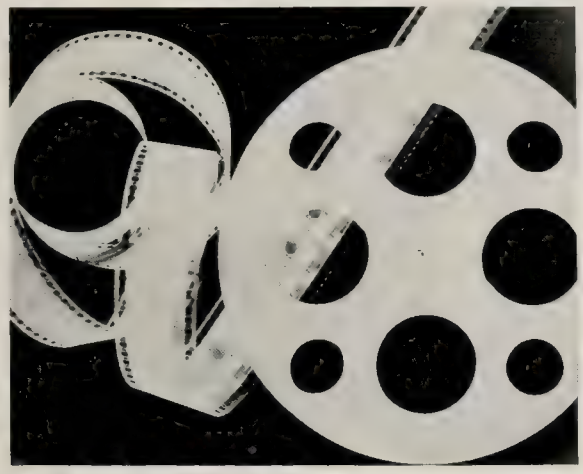
few men have done as much to remind the world that the discoveries of Eastman and Edison were not solely intended for fiction or fantasy. With the introduction of America's mass production methods, calling for the training of thousands of salesmen, service people and to help tell vast numbers of new consumers about newly-developed products, Jamison Handy formed the Organization which bears his name. The man who gave our language such phrases as "talking to the eyes" and the formula of "showing them while you tell them" — was to fulfill the inspiration he himself gained as a boy when his father interested Chicago business leade among them Philip Armour, George Pullman and Marsh Field, in organizing the World's Columbian Expositic

for America's economic future wou all too soon depend on the answer to a common difficu . . . getting enthusiasm and instructions transmitt without loss of spirit or meaning "all down the corpora line." Lessons learned about the value of explaining t crude trucks and tanks of World War I to the va numbers of semi-literate and illiterates in Americ armed forces were to serve his country well in t Second World War. Few people know of the thousan of hours which Jamison Handy spent at the bases a training centers of our Armed Forces, sharing his treme dous store of experience and ideas. Many know of t special devices developed by The Jam Handy Organi tion to provide synthetic training that saved thousan of lives. Millions saw JHO training films in all branches the services. The lessons of peacetime which served country in war brought honors from a grateful nation b none so important to him as the phrase "got be sure boy's ghost will ever say, 'if your film had only done job.' " There were five citations for achievement.

Jam Handy, the innovator, is the Am ican Olympic swimming champion whose techniques that sport have been emulated around the world. T man who won his first Olympic medal in 1904 at the a of 18, returned to compete 20 years later as a member the United States water polo team. His hobby is t development of new swimming styles.

no desk-bound executive, Jamis Handy is a legend in his own time. For he has neit desk or office. One of the most-travelled businessmer the world, his smiling face is a familiar one to all airl personnel for he aways goes to those places where tools created by his Organization are put to use. And sons and grandsons of dealers whom he has helped train are legion throughout North and South America a abroad. He is "teacher" as well as an inspirational lea to them and to all who serve within his company a among its nationwide clientele.

looking to the world and its criti search for knowledge, Jamison Handy has always voted a large part of his life and of his business to serv schools and churches. First to etablish a laboratory measure the results of visual media, the famed J Handy "Eye School" on East Grand Boulevard in Det has been followed by films translated in as many as 5 languages, by filmstrips exported round the world a by exhibit techniques such as the "Wrap-Around" thea at the Delhi World Agricultural Fair.



the faith and devotion of this man his life work has given inspiration and meaning to lives of all of us and hope for all mankind in the t meaning of his dedication to "making them understar

AND THE CHALLENGES...

which are inherent to the greatness of these most powerful media of idea communication . . . for the sound motion picture and the sound slidefilm, among our tools, have amply demonstrated their capacity for "putting ideas into men's heads." Thus, the challenges we face first and foremost, are those of application. To put the right tools to work in the areas of greatest good to our country, to put them to work now, for example, in the guidance and the re-training of the vast numbers of technologically unemployed. To use the film to explain to our people at home . . . as others will use the film abroad . . . the great issues of this day . . . to make simpler and more understandable, as only these media can, the complexities of science and technology . . . to give meaning to the stars and to our goals in outer space.

these are inspiring goals, good for the spirit of men and women blessed with the talent to help meet them through the media they understand so well, worthy of the great moments when a new, truly original new picture lights the preview room screen. Those who create such images hold the power to invoke the emotions . . . to reach the hearts of audiences through the eyes and ears which receive their scenes.

the technology of film and projection has reached new heights of achievement in a few short years with brilliance and fidelity of color undreamed of, with lightness and simplicity at the taking lens and in today's projectors. Use all of this for purpose first, to make the story worthy of the material — with originality of ideas and scripts. The conversion of ideas into film, this translation of thought into informative, clarifying, action-provoking images remains the challenge for the tremendous resource of professional skills mirrored in the pages that follow.

These Production Review Listings Provide Basic Facts for the Buyer

BASIC FACTS, of vital importance to buyers of film production and related communications services, are provided in the nearly 60 studio listing pages of this 12th Annual Production Review. 324 film producers in the United States; 16 Canadian companies and 32 studios in lands around the world have provided clear and concise data on their key staff personnel, the physical facilities owned, services for which they are qualified and, *most important, their recent experience* — clients served and titles created.

Your successful use of these potent media is *the primary aim* of this Guide. Only through these *complete* references, *voluntarily provided* and *published without cost* on behalf of all listees, can you, the prospective buyer, *really know* the calibre and capacity of your prospective supplier. There are no "incomplete" listings in these pages.

The Editors recognize that a few listed individuals may spend the entire year on one or two film important projects. *Our basic requirements* called for titles of *at least five* or more motion pictures, slidefilms or visual presentations completed last year. Companies specializing in television commercials are also clearly identified.

This Production Review *is the only precise measurement* of the specialized industry which it serves. In these 372 company listings, we identify *by name and title,* a total of 1,932 people in charge of operations, 1,592 key persons in the United States alone!

Titles of 1,702 motion pictures and their sponsors and 591 slidefilms produced by these companies in 1961 complete a *massive* job of compilation.

A Key to Sponsor Reference Use of These Listing Pages

☆ The detail in depth of these listings of business and television film companies provides the sponsor, advertising agency and government film buyer with a **complete picture** of his prospective producer.

In addition to names of principal officers and data on services and physical studio facilities, the facts on "Recent Productions and Sponsors" show the nature of recent studio experience, of films produced in the past year. **Preview current pictures as a prerequisite** to purchases; bidders should also provide factual data on **experience, staff, facilities** and **financial stability.**

There was no charge or obligation whatsoever to these listed companies; every known source was contacted with three separate first-class mailings. **Only those who furnished evidence of recent production were accepted for listing.** We know this section to be the **most complete** and detailed compendium of specializing companies published anywhere in the world. This 12th Annual Edition speaks for itself as a useful reference tool. **—OHC**

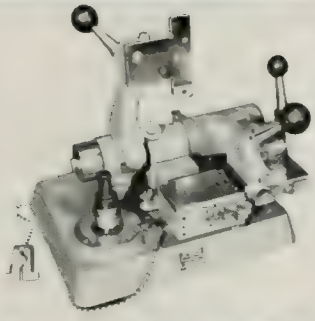
NOW—IMMEDIATE DELIVERY on ACMADE

Recent Purchasers of Acmade Editing Tables

- National Broadcasting Company
- J. Walter Thompson
- U. S. Army Ordnance
- N. Y. Board of Education
- Stamford University, Cal.
- Safety Enterprises, Ohio
- Sound & Scene Productions, Texas
- Porta Films, Mich.
- Bay State Films, Mass.
- Canadian Ministry of Defense

Heavy volume of sales has resulted in stepped-up production and increased production facilities by the Acmade plant in England.



FLORMAN & BABB

exclusive western hemisphere distributor, is now stocking all models for immediate delivery.

NEW FROM ACMADE

ACMADE TUNGSTEN PRECISION SPLICER

This moderately priced splicer incorporates new precision features which insure absolute accuracy and safety in splicing. Three models are available: Model 16-16mm., Model 35-35mm., Model 35-16 combination 35mm. and 16mm.

1. The combination 35mm.-16mm. Model features retractable 35mm. and 16mm. pins. This permits center placement of the 16mm. pins for A and B roll splicing.

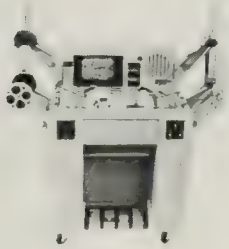
4. Specially designed right-hand pressure block permits easy and accurate back-scraping on all models.

5. Tempered steel springs provide perfect pressure, positioning film firmly during scraping and splicing processes.

2. Stainless steel blocks are precision fitted with Tungsten-Carbide inserts for cutting. Cutting edges will remain sharp and last forever.

3. Attached scraper adjustable for depth — fitting jig incorporated on splicer base.

6. Thermostatically controlled heater maintains constant 100 temperature.



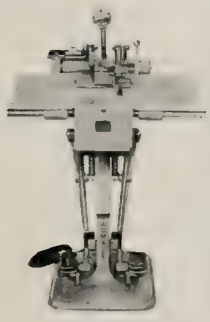
Model 16 — $299

Model 35 — $299

Model 35-16 — $399

ACMADE MARK II EDITING TABLE

Makes Editing Easy!



$2975

f.o.b. New York

Operation of this simple, efficient editing machine can be mastered in minutes. Continuous (non-intermittent) movement provides absolute protection for your film. Instant controls and declutching allows up to 50% greater speed for pic & sound editing. All combinations of 16mm and or 35mm channels, plus magnetic and optical sound available.

WRITE FOR DETAILED BROCHURE

Acmade Foot-Operated Splicer with Tungsten Tipped Blades

Combination 16mm-35mm Model . . .

$1495

This splicer is constructed, as is usual with ACMADE products, of the finest materials and workmanship. All castings are of the best quality and the top body and cutter arms are seasoned to prevent distortion after machining. The machining is carried out to limits of ± .0005" in order that the cutter blades shall close in a dead parallel manner. The cutter blades are made from stainless steel with Tungsten Carbide inserts, and afterwards ground lapped and polished to a limit of ± .0002" thickness and the cutting edges relieved by 1°. The Tungsten Carbide inserts will have indefinite life and will not require sharpening as with other types. A heater unit is installed in the top body of the machine. The top light in a well glass fitting is attached to the body of the machine and also an inspection light in the waste bin together with cement bottle and brush. A scraper block is supplied and also a scraper block setting jib and support shelf rubber-covered. The whole machine is finished in first quality grey hammer and all metal parts other than cutter blades are hard flash chromed.

presenting
THE IMPOSSIBLE!
Namely, A Way Of Using Film
To Get Through To *TEEN-AGERS*
"PROFITS IN THE BAG"

PROBLEM: To train teen-age supermarket personnel in the proper methods of packing paper bags with food and grocery items and to help motivate personnel to use these methods more effectively.

SOLUTION: An 8-minute film, cast in a musical form, with a strong sound track using an orchestra, a chorus and the voice of Frank Gallup telling the "bag-packing" story in rhyming patter style. The visual treatment uses cut-out materials and real objects timed to the catchy rhythms of the track, in a presentation that entertains as it trains.

Ozalid sets the world's standard for overhead projection

Projecto-Printer® 40 makes perfect transparencies from maps, pictures or drawings in minutes.

Vary transparencies with 14 basic image and background colors on Projecto-Viewfoils and other Ozalid specialty films.

Ozalid accessories include Projecto-Mounts, tracing pads, re-usable Planotype lettering, and other tools —to make any job easier.

New Porta-Lite 7 makes the Ozalid OVERHEAD PROJECTION SYSTEM more effective than ever!

Everyone grasps your ideas faster . . . understands more clearly when you project 7 x 7 inch color transparencies *in full room light* with the revolutionary new Porta-Lite 7—the smallest, brightest, ready-to-use portable overhead projector ever designed! Or use the compact new Porta-Lite 10, companion to the Porta-Lite 7 for 10 x 10 inch transparencies. Both Porta-Lite projectors stay set up always—there's no assembly. A single handgrip and aluminum-light construction makes them easy to carry. Prepare transparencies on color foils in minutes with the Ozalid® Projecto-Printer 40 or the Ozalid Diazo copier in your repro department. Everything—foils, mounts, lettering, processors, projectors—to meet any overhead projection requirement is yours from Ozalid.

CANADA IS A FOREIGN COUNTRY

Canada is the United States' best friend and best customer—but it is a "foreign" country with its own identity, its own customs and its own national outlook. Wise Americans recognize this fact and tailor their message to Canadians.

When it comes to films, most choose Crawley's, Canada's largest film production company.

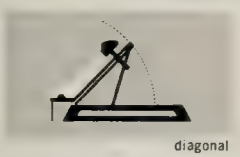
THIS ANIMATION STAND TAKES PICTURES FLAT ON ITS BACK



TILTING COLUMN STAND

This is the only stand manufactured which functions in horizontal, diagonal and the normal vertical positions. It is so soundly and ingeniously designed that it will meet your highest standards of performance for animation, titling, filmstrip and special effects work.

Unlike conventional stand, it offers full motorization of N-S, E-W camera movement and zoom at prices comparable to manual models of stands which do not possess its other features. And it offers greater zoom range and more N-S, E-W travel than anything in its field.

vertical

diagonal

horizontal

Mounted in any diagonal position through 90°, this stand is designed for three-dimensional animation, multiplane animation and process photography. All the movement is in the camera compound, not the base as is common, and the camera can always be positioned properly, even when off-stand.

The horizontal adaptation, with stage dropped, permits shooting off wall mounted art of theoretically unlimited size. Despite its modest price (from $995.00) the P-A Tilting Column Stand is built to highest standards. Base is cast iron and steel, the finest type of construction, and dual vertical columns insure rigidity. All movements are on hardened steel with no-play ball bearings and are registered by counters to 1/100 of an inch. Most important, this stand is engineered to a building block concept and its capabilities can be expanded by addition of accessories.

PORTMAN STAND

On the market for 3 years, this stand has consistently out-performed all comers. It is beautiful in the efficiency of its design. The basic stand is engineered to achieve maximum rigidity, capacity and versatility. It sets new standards in all three respects. Its compact cast iron base represents a major advance, and is one reason why the Portman costs less than competitive stands.

More than 40 accessory units are available to help you custom build your Portman to your own specific needs. These include the most advanced components on the market, again, each engineered for versatile performance.

The Portman offers more peg track movement than the stand you are using now and will accommodate virtually every camera available, including our own. The Acme-Portman Rack-Over is a 16-35mm combination that does things no single camera could ever do before. You'll want to consider it with the stand.

Second Annual P.A. Animation Seminar
April 9, 10, 11 —
Grossinger's Country Club, Liberty, N. Y.
Participation Limited to 100—Inquire Now.

PORTMAN 35MM SINGLE-DOUBLE FRAME CAMERA

The rapidly-growing filmstrip and slide field demands a high-efficiency camera. We designed one and it also performs beautifully in slide motion operation. Principal feature is quick conversion from single to double frame and it also offers a radical new type of viewer.

We've tried to use this page to show you why Photo-Animation is changing some old ideas about what a stand should do. In the final analysis it comes down to engineering and understanding of what you want to do. Before you do anything about new equipment, ask us for the whole story.

Warren Portman, Pres.

THE POTENTIAL OF TODAY'S AUDIENCE

EACH NEW FILM further enlarges the already huge audience for useful, informative, factual motion pictures. And each new season brings additional titles of sponsored film subjects to feed the insatiable demand of organized audiences for education and information via the screen.

More than a half-million 16mm motion picture projectors are operated night and day in the schools, community halls, plants, clubrooms, lodges, churches and other places where organized groups meet to "share the vision."

Television program directors look to sponsored pictures for public-service use on both networks and local stations. A single showing in Manhattan last fall brought such film to nearly 200,000 homes!

Both "hard-top" and drive-in theaters continue to welcome interesting sponsored short subjects of top quality. A minimum schedule would embrace 5,000 theaters; the best of today's films will show to millions of viewers, can go to upwards of 10,000 houses throughout the U. S. alone.

Preparatory steps have been taken to "open" audiences through organized distribution methods in the Common Market countries of Europe. Many of the best sponsored pictures already find their way abroad through government channels; the 8mm plan of the U. S. Department of Commerce is still another avenue to carry trade films abroad.

A vital key to this tremendous audience potential lies in the listing of the **organized, specializing** distribution companies on the following pages. The **economy** and **effectiveness** of the **services** they offer are worthy of review.

FOR SALE

"In The Beginning"

16mm Sound • Color
28 Minutes

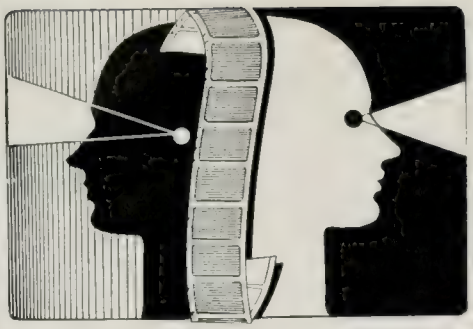
✻

The story of the Earth's history as revealed by the Grand Canyon

✻

This film has won international recognition. It is one of the most "in demand" films circulated by a sponsored film distribution service.

•



A very good potential exists either for sponsored showings or for the sale of prints to schools.

•

Produced in 1953, this film is timeless. The original is in excellent condition. Nearly all printing has been from internegative.

✻

For information concerning the purchase of all rights to this film, write or telephone Edward Fulham, 612 S. Flower St., Los Angeles, Calif., MAdison 6-5711.

BACKGROUND: Founded in 1911 (as "The YMCA Motion Picture Bureau," a division of the International Committee of the YMCA's), Association Films was the first sponsored film distributor in America. In 1949, the company was incorporated as an independent national distribution service.

SERVICES: Promotion, publicity; booking, shipping, storage and inspection of prints (electronically); film programming (community and school groups); film programming (TV stations). Furnishes monthly reports on print activity and audiences (IBM tabulated); advance booking notices to sponsors; correspondence and confirmations (to users); merchandising of teaching aids and other film-related materials; and print servicing (physical handling of professional, sales and TV prints).

OPERATION: Prints and bookings are serviced from four regional film distribution centers, wholly owned by Association Films.

ASSOCIATION TELEFILMS — This television division is responsible for creation and distribution of special sponsored film series, including *American Family*, (a TV magazine starring Zacharv Scott and Ruth Ford), *Discovering America*, (travel and transportation), *Your Neighbor—the World*, (world affairs), *Theatre 30*, (half-hour sponsored films with story lines,), *Camera 15*, (news and views), and *Rx Your Health and Safety*, (health and safety package). Association Telefilms also prepares TV promotion kits and other special services for sponsors and stations.

✻ this symbol, appearing over a distributor's listing, indicates that display advertising containing additional and useful reference data appears in other pages of this 12th Annual Production Review issue.

✻

Main St., Richmond 19, Va.; and 4431 W. North Ave., Milwaukee 8.

BACKGROUND: Founded in 1920 in Chicago. In the past 40 years, has grown into a national organization of 28 offices handling rental films for schools, churches, clubs and industry. In 1948 Ideal began the distribution of industrial films, for the first time making available a proved paying customer list for the distribution of industrial films services.

SERVICES: Promotion, publicity; booking, shipping, storage and inspection of prints (electronically); film programming (community and school groups); film programming (TV stations). Furnishes monthly reports on print activity and audiences, all supported by actual signed audience reports; advance booking notices to sponsors; correspondence and confirmations (to users); merchandising of teaching aids and other film-related materials; print servicing (physical handling of professional, sales and TV prints).

OPERATION: Prints and bookings are serviced from 28 company controlled distribution centers.

Bruce Thomas, *in charge.*

BACKGROUND: The outgrowth of a pioneering program in the field of talking motion pictures by Electrical Research Products, Inc., a subsidiary of the Western Electric Co., formed in 1927 at the birth of the commercial sound motion picture medium, Modern Talking Picture Service first emerged as the non-theatrical department of that company. An early pioneer in the licensing and operation of portable sound projection apparatus and also providing projection service for industry, etc., Modern's present trade name was adopted by its licensees in 1935 and Frank Arlinghaus, then of ERPI, was placed in charge of this growing activity. Modern became an independent corporation on July 1, 1937, under the ownership and management of its distributing employees.

SERVICES: In 1962, in its 25th year, Modern represents over 400 organizations from industry, commerce and the professions, distributing their public relations films to schools, colleges, industrial plants, offices, and to the pubic and private clubs, and social groups throughout the United States and Canada. Other primary channels of distribution in which Modern is a leading specialist include: theatres showing sponsored short subjects; television stations; and rural roadshow operations. Modern operates a network of 31 regional libraries. For sponsors utilizing its service, the company promotes, ships, cleans, repairs, maintains and stores their films. Additionally, it counts audience attendance, records their comments and furnishes the sponsor a monthly tabulation. Extensive IBM facilities and equipment for promotional printing are maintained at New York headquarters. All regional libraries are equipped for electronic film inspection and handling. In 1960, Modern established its Modern Learning Aids division to distribute educational films for purchase, subscription (series rental) and lease-to-buy. MLA distributes the high school physics films developed by the Physical Science Study Committee.

REGIONAL EXCHANGES are located in Atlanta, Boston, Buffalo, Cedar Rapids, Charlotte, Chicago, Cincinnati, Cleveland, Dallas, Denver, Detroit, Harrisburg, Houston, Indianapolis, Kansas City, Los Angeles, Memphis, Milwaukee, Minneapolis, New Orleans, New York, Omaha, Philadelphia, Pittsburgh, St. Louis, San Francisco, Seattle, Washington D. C. as well as in Honolulu, Hawaii; Anchorage, Alaska and Toronto, Ontario.

SPECIAL ACTIVITIES & PUBLICATIONS: A physical handling service is maintained for technical professional and special films. Recent references for sponsor reading (available on letterhead request or by telephone from listed sales offices) include: "The Opportunity for Sponsored Films" —"Business Films at the Movies"—"How Television Stations Use Business Sponsored Films" — "The Teen Age Market"—and "Series Programming, PR Films Free From Modern TV."

THE PRINCETON FILM CENTER, INC.

W., Atlanta, Geogria; Mr. William Butz, 2504 Eakin Street, Dallas, Texas; Mr. Harold O. Ruhge, 3830 North Lincoln Avenue, Chicago 13, Illinois; Mr. David Arnaud, 255 Minna Street, San Francisco, California.

ROTHACKER, INC.

Headquarters Office:
Time & Life Building, Rockefeller Center
New York 20, New York
Phone: CIrcle 5-6878

Douglas D. Rothacker, Jr., *President*
W. Stanfield Cooper, *Vice-President*
Mayme R. Dawson, *Secretary*

BACKGROUND: Established in 1910 as the Rothacker Film Manufacturing Co., producer and distributor of educational films, the organization was subsequently reorganized as Rothacker, Inc., and is currently engaged in specialized business film distribution through all available media to audiences throughout the world.

SERVICES AND OPERATION: For all types of non-theatrical audiences, and for theatrical and television showings, individual promotional campaigns, audience selection, publicity, multiple confirmation, audit follow-up are done on a separate basis for each film. Prints are all hand-inspected, sound-read, cleaned, repaired, shipped, stored and a complete record maintained on condition of each print; annual print breakdown with classifications sent as well as monthly exhibition reports with full information of each showing; special questionnaires provide additional information on audience reaction, comments. Supervisory operation in New York supplemented by distributors functioning locally in New England, the South, Middle West and Far West.

FOREIGN DISTRIBUTION: In addition to full coverage nationally, Rothacker, Inc., now offers its international distributing service covering Europe, the Orient and Latin America. The same standards of operations, available domestically, are handled, for Europe and the Far East, through representatives directed by staff in New York. For Latin America, arrangements are made through the facilities of Servicio de Informacion Panamericana.

(CONTINUED ON THE FOLLOWING PAGE)

Imitation is the

SINCEREST FORM OF FLATTERY!

Years ago (in fact back in 1939) we originated the drum-type of magazine for slides. When others try to use the radial drum it should be kept in mind that the precision of operation of the SELECTROSLIDE is due to the precise tolerances in engineering of the unit AND the spring-steel slide-holders which accommodate ANY SLIDE MOUNTS.

Ask about these and other important advantages which put SELECTROSLIDE ahead of anything in the field years ago—and keep SELECTROSLIDE in the vanguard in the fields of teaching, sales training, selling and lecturing.

Write for illustrated literature and name of nearest distributor

Let's talk about *LIGHT*

This is perhaps the most important and least emphasized factor to perfect projection.

Here again, nothing on the market can equal the performance of the SELECTROSLIDE. This is so, because of the condensing system, recognized by authorities as the finest and most costly available.

The massive aspherical condensing lens with an oversize glass reflector squeezes MORE LIGHT from the same lamp than any other projector. Special high transmission heat-filters let more light through to the screen. SELECTROSLIDE is the only automated projector with MATCHED interchangeable collective condensing lenses (5 of them) to funnel all the light to the screen from the shortest lens (1½") to the longest (11") a-n-d SELECTROSLIDE offers projectors for 500, 750 and even 1200 watts.

Overview: Films in Medicine and Health

by Mervin W. LaRue, Sr., President, Biological Photographic Association

In our modern society change is the rule rather than the exception. Change is all around us —constant and rapid — and most of us are so busy keeping abreast of daily tasks we never find the time to stop, think and evaluate.

Our industry is a most versatile and virile one. It has absorbed far more impacts of progress than most. First, we had to compete with live stage shows and after a period of adjustment and compromise movies and stage presentations appeared side by side.

. . . And Then Along Came TV

We had to meet the impact of radio and further adjustment and compromise developed a marriage referred to as "talkies".

We ran headlong into TV, paused to get our breath and again found a common denominator. New applications of our medium reached our attention every day. Perhaps the most interesting field in which new applications are constantly being explored and developed is the field of medicine.

When I started making medical films it was considered very poor taste if not downright lawless for a professional to use 16mm cameras or film to accomplish a visual task. Today, practically all of the work in this field is on 16mm color film. The unusual applications of our medium in medical teaching and research are many and varied.

We Work in Three Fields

Briefly, our work can be divided into three general classifications — undergraduate teaching, postgraduate or extension instruction and the recording of visual observations for subsequent evaluation and report.

As an example, the American Medical Association, the American College of Surgeons and the Association of American Medical Colleges maintain libraries of suitable subjects for their extension work. Much of this material is prepared in the teaching institutions and in the large clinics. With motion picture, digests of selected subjects dealing with new and approved techniques and methods are prepared at a suitable level and made available to practicing physicians through state, county and national medical societies, hospital staffs and allied groups.

Record for Study & Analysis

The recording field covers many applications where visual records are desired for careful analysis and subsequent study such as the recording of clinical findings for later comparison or the recording of observed phenomena for repetition at will.

As an example, Dr. Paul Holinger has long been active in the visual field and has sponsored the development of special cameras and equipment for recording, in motion and color, clinical findings in the throat, esophagus and tracheal tree down to and below the division of the bronchus. Dr. Jay Garner, in association with Dr. Nesselrod, has performed much similar work through the proctoscope observing diseased conditions and pathology well above the sigmoid muscle of the rectum.

Dr. George Shambaugh, Jr. and his associates at Northwestern have long been active in this field of otolaryngology. They are routinely recording basically their surgical procedures on the inner and middle ear. All of this work is done on the oto-microscope and a special floor-mounted camera. An observing port has been developed which permits the camera to see what the surgeon is doing at the moment that he is doing it.

The same group has developed and installed a rather elaborate procedure for the time-lapse recording of tissue culture for later study. Dr. Paul Moore has long been active in the making of high-speed movies of the vocal cords.

Combining X-Ray, TV, 16mm

Perhaps one of the most recent and practical applications of movies is the combination of modern X-ray methods of employing image intensifiers, TV camera and 16mm movie camera. In an endeavor to reduce the amount of radiation on human tissue the image intensifier is employed to project an image on the accelerat screen where a TV camera pic up the image electronically a places the picture on a special T tube. A motion camera "kin scopes" the image so that the r sulting loop of X-ray-motion p ture film can be studied by specialists as long as they m wish to determine an accurate agnosis.

These many unusual applic tions have been fascinating d velopments in our chosen fiel Nevertheless, we cannot help b feel that a broader field of endea or is available to us.

As a means of promoting bett understood relations between t medical profession and the gene al public, as a means of mass ed cation in better health metho and practices, as a means of ra ing public funds for further r search and in the many fields health education, the motion p ture can be used most effective However, producers of films these fields must have a better u derstanding of the fields, the tr contributions of the medical pr fession to human welfare, th aims and desires.

True, it is not too difficult secure the wholehearted inter of medical men in this endeav but unfortunately budgets are r readily available. However, if endeavor to find what is need secure the proper endorsement a worthwhile program having broad appeal, it is not too dif cult to find a sponsor.

Example of a Needed Film

Such a subject as "The Ca of Our Senior Citizens" might considered as a possible examp Treated with sympathy and und standing, an authoritative progra on this particular subject, e dorsed and approved by the a propriate medical group or grou should find a sponsor without t much delay or difficulty. Ma other equally worthwhile subje might be considered for possi treatment.

The need for a possible fi should, however, be fairly well tablished. This can be genera accomplished by working in cl association with individual d tors, medical schools, research a teaching hospitals, the vario medical societies and other int ested groups. A continuous, wo ing relationship with individu and groups in the medical field c be of enormous value in the pl ning and execution of a succes film program.

For 25 Years We Have Urged:

This has been Haig and Patterson's basic principle for a quarter of a century. In producing business films, only business purposes are relevant. Techniques change, essentials do not. For measurable results, choose a producer who is able to think as a businessman. Haig and Patterson

SHOOT FOR THE MARK

brings to your service a business point of view, knowledge of business fundamentals, mastery of the film-making craft. Haig and Patterson makes your motion pictures and slide films perfected working tools—practical, economical, capable of doing exactly what you pay to have them do. Write for our booklet: *How Much Should a Film Cost?*

SOUND BUSINESS FILMS SINCE 1937

DEPARTMENT OF DEFENSE

The Pentagon, Washington 25, D. C.

Office of Public Affairs: Audio-Visual Division

Office of News Services

This division is the central Armed Forces contact for the news media and producers in the important fields of radio, television, still pictures and motion pictures. Direct contacts on national and international release matters in these fields are:

Bertram Kalisch, *Chief, Audio-Visual Division.*
Phone: Oxford 7-6214

Donald E. Baruch, *Chief, Production Branch*
Phone: OXford 7-4596

Robert W. Harvey, *Chief, Photo Branch*
Phone: OXford 7-5331

Norman T. Hatch, *Chief, Radio-TV-Newsfilm Branch*
Phone: OXford 7-5111

ACTIVITIES: The Audio-Visual Division approves release of Armed Forces stock footage which cannot be procured commercially for newsfilm television programs, theatrical productions, etc. The Production Branch cooperates with producers of some 35 major theatrical productions and 10-12 TV series featuring or relating to the Armed Forces. There is an Armed Forces Film Supplement which lists the various Service films of Army, Navy, Air Force and Marine Corps available for public non-profit showing or cleared for public service TV programs. Information on such films can be obtained from the Production Branch. The Still Photo Branch releases to the press and television approximately 1500 photographs per year.

The Radio-TV-Newsfilm Branch releases approximately 260 (2-3 minute) subjects to the TV, newsfilm and theatrical newsfilm media annually. It maintains two small Pentagon studios for servicing the news media and radio programs, which feature interviews with top Defense officials. In addition, the Radio-TV-Newsfilm Branch releases taped and televiewed messages by Secretaries and Service Chiefs and radio trailers for Armed Forces Day. Civil Defense film activities are new being handled by the Department of Defense.

PRODUCTIONS: The only film directly produced in 1958, 1959, 1960 by the Office of Public Affairs for the Secretary of Defense is an annual film report to the Armed Forces and public on the progress and achievements of the Armed Forces. These reports have been edited and assembled by the Army Pictorial Center in New York. The current *The Eagle's Talon* is a 25-minute, 16mm color film with Walter Cronkite as narrator.

Armed Forces Institute of Pathology

Medical Illustration Service

Herman Van Cott, *Chief, Medical Illustration Service*
Phone: RAndolph 3-1000, ext. 2866

Morris Goldberg, *Chief, Training Aids Division*
Phone: RAndolph 3-1000, ext. 2865

Miss Ruth U. Baker, *Chief, Visual Aids Branch* (AFIP Film Library)
Phone: RAndolph 3-1000, ext. 2864

ACTIVITIES: This Institute makes or supervises films for the Armed Forces on medical subjects.

FACILITIES: In-house capability, and contracts for films through the Army Signal Corps.

DISTRIBUTION: AFIP operates a U. S. Army Signal Corps film exchange for medical films. The institute procures and loans films for the Armed Forces wherever and whenever they are needed. Unclassified films are available to anyone, with borrower paying postage both ways. For information about available films, write the Government Printing Office, Washington 25, D. C., and refer to *The Film Reference Guide — Medical and Allied Subjects.*

Directorate For Armed Forces Information and Education

Paul J. Murdock, *Chief, Motion Picture Branch*
Phone: OXford 7-2967

Dallas Halverstadt, *Assistant Chief*
Phone: OXford 7-2967

• This office produces and distributes films for the use of the Armed Forces. Films are distributed through the film exchanges of each service, through on-base theaters, and sometimes to TV networks in 31 overseas locations.

DEPARTMENT OF THE AIR FORCE

The Pentagon, Washington 25, D. C.

• The U. S. Air Force produces for itself or contracts with commercial producers for approximately 500-700 films of all types each year for internal and external purposes.

ACTIVITIES:

• **Training Films:** The Office of the Chief of the Training Film Section in Headquarters USAF validates, funds for, and directs the production of all Air Force Training films. Ninety percent of this total effort is contracted out to industry. All contracts are negotiated by the Air Force Logistics Command, Wright-Patterson Air Force Base. All Contracts are monitored by the Air Photographich & Charting Service, Orlando, Fla.

This same office in the Pentagon is responsible for a program, designated the Weapons/Support system Training Film Program, which has been established so that training films on new weapons systems will reach the field at the same time as the weapons system itself. In most cases, the Air Force Logistics Command will negotiate with the motion picture industry for these films, and the prime contractors on the job will oversee the technical and engineering aspects of the films.

Further information may be obtained from:
Major John G. Rogers, *Chief, Training Film Section,* AFPTR-D, Headquarters, USAF, The Pentagon, Washington 25, D. C. Phone: OXford 5-5569

Robert Ashenfelter, *Contracting Officer,* Aeronautical Systems Center, Air Force Logistics Command, Wright-Patterson Air Force Base

• **Services & Support Division:** This division is responsible for the Air Force Special Film Projects and Production-Laboratory Services.

Special Film Projects: include general information and indoctrination films for the Air Force, and in some cases, the public.

Production-Laboratory Service Contracts: supplement the Air Force's in-service capability and provide for a combination of services from the motion picture industry.

The following officers are in charge of these programs:

Rodney B. Radford, *Chief, Motion Picture Section,* AFOOP, Headquarters USAF, The Pentagon, Wasington 25, D. C.

James Etheridge, *Action Officer,* Motion Picture Section, AFOOP, Headquarters USAF, The Pentagon, Washington 25, D. C.

Major Donnell Bjoring, *Action Officer,* Motion Picture Section, AFOOP, Headquarters USAF, The Pentagon, Washington 25, D. C.

FEDERAL AUDIO-VISUAL PROGRAMS

DEPARTMENT OF THE AIR FORCE:

• **Office of Information:** This office releases Air Force Sponsored Films, Newsfilms and Still Pictures.

Sponsored Films: Over $850,000 worth of educational and informational films are in production or distribution in the Air Force's Sponsored Film Program. These films, which cover a wide variety of subjects of interest to the Air Force and to the public, are privately financed by industry and are distributed through the Air Force's Central Film Exchange in St. Louis, Mo. Present subjects under consideration by industry include "basic research"; the Air Force "grass roots" farm program; "plastics in the missile and space program"; "telemetering"; "nuclear propulsion" and others. This program is administered by the Chief, Motion Picture Section.

Major John R. Walker, *Chief, Motion Picture Section, Pictorial Branch*, SAFOI, Headquarters USAF, The Pentagon, Washington 25, D. C.
Phone: OXford 5-5820

Major William J. Lookadoo, *Chief, Pictorial Branch*, SAFOI, Headquarters USAF, The Pentagon, Washington 25, D. C.
Phone: OXford 5-5853

Major Sherwood A. Mark, *Deputy Chief, Still and Reel Pictures*, SAFOI, Headquarters USAF, The Pentagon, Washington 25, D. C.
Phone: OXford 7-5630

FACILITIES: The Air Photographic & Charting Service, Orlando, Florida, provides complete in-service capability for making Air Force films. "Qualifying questionnaires" for producers interested in bidding on AF contract productions may be obtained from the office of:

Brigadier General Clifford H. Rees, *The Commander*, Air Photographic & Charting Service, Orlando, Florida

Colonel James Warndorf, *Deputy Chief of Staff, Photography*, Air Photographic & Chartering Service, Orlando, Florida

DISTRIBUTION: Air Force films are distributed through the Air Force Central Film Exchange in St. Louis which serves, in turn, 140 base film libraries all over the world. This film exchange has recorded 1,900,000 showings to an audience of 19,000,000 in one year, exclusive of TV programming.

DEPARTMENT OF THE ARMY

Office of the Chief Signal Officer

Army Pictorial Division

The Pentagon, Washington 25, D. C.

• The Chief Signal Officer of the Army is responsible for policy matters on the procurement, production and distribution of *all* motion pictures for the Army. As a result, all film programs are authorized by the Army Pictorial Division of the Office of the Chief Signal Officer. Information pertaining to the production or the distribution of prints may be obtained from the following:

Col. A. A. McCrary, *Chief, Army Pictorial Division*
Phone: OXford 7-3520

Lt. Col. Bevelle T. Brown, *Chief, Motion Picture Branch*
Phone: OXford 7-4455

James A. Moses, *Chief, Film Distribution & Utilization Branch*
Phone: OXford 7-2039

ACTIVITIES: The Army Pictorial Division co ordinates production of more than 300 films a all types each year, including the TV series *Th Big Picture*, and some films for the Office o Armed Forces Information and Education.

THE ARMY PICTORIAL CENTER has primary re sponsibility for the actual production of motio pictures and requests for information concern ing contracts for writing, production and pro cessing should be directed to the Commandin Officer, Army Pictorial Center, 35-11 35th Ave Long Island City, New York. Phone: AStor 4-3100.

DISTRIBUTION: All official motion pictures, fil strips, transparencies and related audio-visu aids are distributed throughout the Army b the U. S. Army Film Distribution & Utilizatio System. This system includes the Film Distrib tion & Utilization Branch, Army Pictorial D vision, OCSigO; the Distribution Branch Army Pictorial Center, and the 256 Film Equipment Exchanges located at Army hea quarters, major service schools and training i stallations throughout the ZI (Zone of Interio Armies and Overseas Commands.

DEPARTMENT OF THE NAVY

Washington 25, D. C.

• The U. S. Department of the Navy produc motion pictures for such purposes as trainin maintaining fleet readiness, explaining ne weapons and devices, and for medical, historic indoctrination, safety and recruiting uses, name a few key subject areas.

ACTIVITIES:

• *Information and General Policy Procedures* - all aspects of the Navy film program, includi application information for commercial produc interested in bidding on Navy contract films, a handled by the Chief of the Bureau of Nav Weapons, Navy Department, Washington 2 D. C.

Captain E. B. Johnson, USN—Code FF, *Director, Photographic Management Division*

shooting around *Washington* ?

It happens to all good producers now and then: the next time you have shooting requirements in Washington, you can do away with all the problems of personnel, equipment, shipping, accommodation — by calling Milner-Fenwick, Inc. All personnel and equipment are available at rates low enough to make sure you can handle them with overhead and profit to spare.

EQUIPMENT: 16/35 Blimped Arries—Moviola Dolly—Gear Head—Mobile (2½ ton) van, equipped with 20 x 8 shooting platform—Master B/L—Colortrans—5K2K750 lights—heavy stage cable—16mm mag. records—35/16mm Acme optical camera—360° Oxberry—photo aircraft—powdered wigs.

PERSONNEL: directors—writers—editors—cartoon artists—technical artists—illustrators—cameramen grips—electricians—production assistants—actors—announcers—pilot—script girls—minutemen.

We have equipment to handle anything this side of a re-enactment of the British arrival in 1812. Experience? The only shooting in Washington we ever missed was the one of Lincoln. (Some outfit by the name of Booth wanted to do it alone — they ran into all sorts of trouble.)

Washington	ST. 3-4650	Ed Hopper
Cleveland	LO. 1-6835	Bob or Frank Gold

FEDERAL AUDIO-VISUAL PROGRAMS

DEPARTMENT OF THE NAVY:

pervises the production of Navy training films and maintains the Navy's motion picture and still photographic film libraries.

The motion picture production facilities at the Center are modern and complete. There is a sound stage, film and tape recording and mixing equipment, an art and animation group and editorial branch. Here experienced script writers and artists collaborate with Navy photographers and technicians, maintaining a high standard of quality for Navy productions. The processing division has the capability to develop and print negative film and release prints in 35mm and 16mm black-and-white and negative-positive color. About 75 percent of all Navy films, however, are contracted with established commercial producers.

In addition, there is a growing requirement for films to report on the Navy's research and development activity, and to meet this need, rapidly, a TV closed circuit kinescope facility has been activated at NPC during the past year.

Extensive libraries of both still and motion picture photography are maintained at the Center. Library services are provided to the Naval Establishment and other government agencies and to commercial concerns on a cash sale basis. The Still Picture Department produces all types of still photography such as press, serials, murals, and official portraits. Up-to-date continuous roll paper printing and processing units meet the Navy's large volume print demands. There are also complete negative, positive and transparency color processing facilities.

A research and development group conducts tests, experimentations, development and evaluation of photographic equipment. Here, technical photographic specifications, instructions and other publications are also prepared. Information about NPC may be obtained from: the Commanding Officer, Naval Photographic Center, Naval Air Station, Washington 25, D. C.

Captain H. W. Crews, USN, *Commanding Officer*
Phone: LUdlow 4-2400, ext. 224-5

CDR. C. W. Richey, USN, *Head, Motion Picture Department*
Phone: LUdlow 4-2400, ext. 355

J. Walter Evans, *Assistant Head, Motion Picture Department*
Phone: LUdlow 4-2400, ext. 282

DISTRIBUTION: Prints of Navy films available to the public can be purchased from United World Films, Inc., 1445 Park Avenue, New York 29, N. Y., under an annual contract administered by the U. S. Office of Education. Navy films may be borrowed from the nearest Navy film supply source. Training Aids Libraries, Aviation Film Libraries, Recruiting Stations and Public Information Offices are located throughout the United States. Requests for the use of Navy Stock footage in commercial productions should be submitted to the Chief of Information, Navy Department, Washington 25, D. C.

When the cards are all down

SELECTROSLIDE always wins!

Reliability and faultless operation are the two most important advantages one hears mentioned in connection with the SELECTROSLIDE whenever and wherever knowledgeable A-V people get together.

Scores of industrial firms have long standardized on SELECTROSLIDE—the National Park Service has at least one in every major National Park and Monument in the Country.

No need for "stand-by" equipment when you use SELECTROSLIDE projectors because they are built to hold up. But—don't take our word for this—ask those who own SELECTROSLIDE automated slide projectors, they are our best advertisements.

Write for illustrated literature and name of nearest distributor.

FEDERAL AUDIO-VISUAL PROGRAMS - PERSONNEL

UNITED STATES

ATOMIC ENERGY COMMISSION

Division of Public Information

Audio-Visual Branch

Washington 25, D. C.

• The Audio-Visual Branch of the Atomic Energy Commission has as its primary function responding to requests from the public media in all the audio-visual fields for assistance in the preparation of films, stills, and other audio-visual materials on atomic energy.

Edwin L. Wilber, *Branch Chief*
Phone: HAzelwood 7-7831, ext. 5365
Elton P. Lord, *Deputy Chief*
Phone: Hazelwood 7-7831, ext. 5476

ACTIVITIES: This branch plans and carries out audio-visual and still picture projects to advance specific Commission Programs, and acts as advisor to Commission and contractor personnel in Washington and nationwide on audio-visual problems and projects. This branch also places Commission- and contractor-produced motion pictures into loan and commercial sale channels, determines the content of the 10 domestic and 4 overseas film libraries, and issues popular-level and professional-level film lists.

FACILITIES: AEC has no motion picture production facility or motion picture laboratory, but uses Government and or commercial services.

DISTRIBUTION: AEC operates an 8,500 still photo library, and distributes films through 10 domestic film libraries which cover particular geographical areas. All films are for free-loan. The Commission also has four overseas libraries at its offices at the U. S. Embassies at London, Brussels, Tokyo and Buenos Aires, stocked with semi-technical and technical films. The Brussels and Buenos Aires libraries have about 50 films each in French and Spanish respectively. Information on libraries available from Washington office.

STOCK FOOTAGE: The Commission has more than 120,000 feet of 35mm black-and-white unedited film footage on peacetime uses of atomic energy available for purchase. Information may be obtained from Washington office. Color stock footage is also available from any of the completed documentary films produced by or sponsored by the government. Films may be borrowed from libraries in geographical areas for footage counts prior to purchase of duplicating materials from the various laboratories holding the originals. Unedited stock film footage in black-and-white and color on nuclear or thermonuclear detonations sold at Lookout Mountain Air Force Station, USAF, 8935 Wonderland Avenue, Hollywood 46, California.

PRODUCTIONS: During 1961, the AEC and its contractors produced films as follows: *Introduction to High Vacuum; Nuclear Reactors for Space; Plutonium Fuel Fabrication EBR-1 Mark IV; Atomic Weatherman; ST-90 Isotopic Applications; Understanding the Atom; Alpha, Beta and Gama Atoms at Work; The Latin-American Exhibit; Opportunities Unlimited; Friendly Atoms in Industry; Atoms on the Farm.*

DEPARTMENT OF COMMERCE

Washington 25, D. C.

• The U. S. Department of Commerce produces and circulates motion pictures dealing with those domestic and foreign subjects relating to the offices which are under the jurisdiction of this Department.

Business & Defense Services Administration

Nathan D. Golden, *Director, Scientific, Photographic and Business Equipment Division*
Phone: WOrth 7-4378

Geo. R. Donnelly, *Chief, Motion Picture & Photographic Products Branch*
Phone: WOrth 7-2778

Earl Young, *Motion Picture Analyst, Motion Picture & Photographic Products Branch*
Phone: WOrth 7-2911

• The Motion Picture and Photographic Products Branch was established to serve the motion picture and the photographic and motion picture apparatus, equipment and supplies industries. It performs many functions, some of the more important being to foster, promote, and develop the foreign and domestic trade of these industries. It provides market development counsel to producers and exporters as to where and how to cultivate and expand their overseas sales, acquire distributors, facilitate the acquisition of frozen remittances, and render assistance in other problem areas. It also participates in tariff and trade negotiations, and maintains constant surveillance of foreign trade trends, and periodically issues concise basic information releases for industry guidance. Furthermore, the Branch acts as the focal point for industry with reference to advice and guidance to other agencies and use of other agency facilities.

Coast & Geodetic Survey

G. P. Meredith, *Chief, Technical Service Div.*
Phone: WOrth 7-5749

• This bureau has produced, in the past ten years, five documentaries on the following subjects: general activities of the Coast and Geodetic Survey; tides and currents; wire drag; surveyors at work; and oceanographic cruise of Ship Explorer. Certain aspects of these productions were contracted to industry.

In addition, the Coast and Geodetic Survey recently collaborated on the National Academy of Science's *Planet Earth* series. Film information is available through the Technical Services Division.

National Bureau of Standards

William T. Tilley, Office of Technical Information, Connecticut Ave. & Van Ness St. N. W., Washington, D. C.
Phone: EMerson 2-4040, ext. 7093

• This Bureau produces scientific and technical motion pictures about the research programs of the National Bureau of Standards. Films are available from the above address.

Bureau of Public Roads

William F. Hall, *Head, Photographic Section*
Phone: DUdley 2-3008

ACTIVITIES: This Bureau produces films on subjects pertinent to highway development and improvement, safety, and other related subjects for government agencies, state and local highway departments, engineering colleges and universities, and other interested organizations. Films are often produced in cooperation with these organizations and schools.

FACILITIES: In-house capability.

DISTRIBUTION: These films are available on a loan basis, with borrower paying transportation charges both ways, from the Chief, Motion Picture Branch, Bureau of Public Roads, Washington 25, D. C. Safety films on winter driving are available from the National Safety Council, 425 N. Michigan Blvd., Chicago 11, Illinois.

U. S. Weather Bureau

James M. Beall, *Public Information Coordinator*
Phone: ADams 2-3200, ext. 456

Phillip Crofford, *Film Librarian*
Phone: ADams 2-3200, ext. 217

• The Weather Bureau occasionally contracts for films and film shorts to be used in warning programs associated with hurricanes and tornadoes. In addition, it provides technical assistance for films on weather related subjects. The Bureau has an extensive library of other weather films produced elsewhere; loan information is available from the Office of Public Information or the Film Library.

Office of International Trade Fairs

John D. Leonard, *Chief, Industrial Promotion*
Phone: DUdley 6-1454

ACTIVITIES: This office produces films for business executives on the dynamic government-industry International Trade Fairs Programs.

FACILITIES: These films are contracted out for production.

DISTRIBUTION: The color films varying from 13½ to 28 minutes in length and which are available on a free loan basis, and handled through the Industrial Promotion staff of this office, and through the Department of Commerce field offices. Black-and-white prints also are available for TV use.

PRODUCTION: *Uncle Sam Goes To the Trade Fairs; Showcase for Freedom; Tradeways to Peace; The Trade Fair Story.*

Maritime Administration

Richard Shea, *Public Information Officer*
Phone: DUdley 6-4461

• This administration engages in limited film production to promote American Merchant Shipping. At present, the Maritime Administration is engaged in a cooperative project with the Atomic Energy Commission and commercial industry on a special film report about the N. S. Savannah, the world's first nuclear merchant ship. Films are available through the Director, Public Information.

Meyer Reiness, *Chief, Bureau of Mines Distribution*, 4800 Forbes Ave., Pittsburgh, P

"Polaroid" & "PolaLine"®

This and 55¢

gets you a finished slide in less than 90 seconds

"This" is a regular Polaroid Land Camera. The 55¢ is the per-exposure cost of special transparency film, including the mount.

All you have to do is load the film into the camera, snap the shutter, pull the tab and wait a moment. Then open the back of the camera and peel off a transparency.

After a quick hardening and mounting in a click-together frame the slide is ready to show. From snap to screen in less than 90 seconds... just about half the time it takes to cook your morning egg. And at about ⅓ the cost of conventionally processed slides.

A new Polaroid PolaLine Transparency film is especially designed for line copy work. The blacks are really black, the clear areas really clear. These are 3¼ x 4 transparencies for standard lantern slide projectors. Development time is 10 seconds.

There's another film for continuous tone work. It comes in two sizes, one for standard slide projectors and one for use in a complete system that employs 2¼ x 2¼ slides in a Polaroid Projector. Development time is 2 minutes.

All three projection film types can be used with any Polaroid Land Camera that uses 40-series film except the J-66.

For more information on how this film will help you in your work, write to Technical Sales Dept., Polaroid Corporation, Cambridge 39, Mass.

REMEMBER!

The best picture for your budget

FEDERAL AUDIO-VISUAL PROGRAMS

INTERIOR: U. S. BUREAU OF MINES

ACTIVITIES: The Bureau of Mines has a broad film program dating from about 1920. Motion picture subjects deal with natural resources of states and areas and with mineral commodities including metals, non-metals, coal and petroleum.

FACILITIES: All films are made in cooperation with private industrial firms which pay production costs and select commercial film producers. The Bureau maintains no production facilities of its own.

DISTRIBUTION: About 6,000 prints of films are distributed to the public on a free loan basis from the principal film center of the Bureau of Mines, 4800 Forbes Ave., Pittsburgh, Pa., and from depositories in 40 states. Annual number of bookings is 225,000. Most films are cleared for free TV use. Single or block bookings arranged. Catalogues available.

PRODUCTIONS: Films in current production include: *Copper the Oldest Metal; The World of Phosphorous; Natural Synthetic Rubber; The Story of Potash;* Educational TV Program Series: The following television series are available: *Down to Earth; States of the Union; Out of the Earth.*

The Bureau of Reclamation

Otis Peterson, *Assistant to the Commissioner, Information*
Phone: REpublic 7-1820, ext. 4662

ACTIVITIES: The Bureau of Reclamation produces one or two pictures a year on water resource development in the seventeen western states. These films are usually "low budget," sound-color films which run 28 minutes for TV use. Film catalogs are available from regional offices and from Washington D. C. office.

FACILITIES: Most of the film work for the Bureau of Reclamation is contracted by the appropriate regional office commercial producers. There are seven regional offices, supervised by the Washington office.

DISTRIBUTION: Each of the seven regions, and the Washington office, has its own distribution channels. On occasion, prints are loaned to educational institutions for short periods of time.

PRODUCTIONS: Recent productions include: *Key to the Future*, a film about the Colorado river storage project in Utah, Wyoming, Colorado and New Mexico; *Operation Glen Canyon*, which documents construction of Glen Canyon Dam on the Colorado River in northern Arizona. Key unit in the Colorado river storage project; *Water for the Valley*, the story of Central Valley project, between the coastal and Sierra ranges in California.

The Bureau of Land Management

Dwight Rettie, *Information Officer*
Phone: REpublic 7-1820, ext. 3609

• Three films are available from the Bureau's Washington, D. C., office and from 11 State offices in western states.

Available for loan and for TV showings are: *Our Public Lands*, a 28-minute color film on conservation and development of the national land reserve; *Alaska, Land to Grow On*, 28-minute color film on public lands and resources in Alaska; and *Watershed Conservation*, demonstrating water conservation on the national land reserve. State BLM offices having film libraries are: Portland, Sacramento, Phoenix, Reno, Salt Lake City, Santa Fe, Denver, Cheyenne, Boise, Billings, and Anchorage.

The Geological Survey

J. O. Kilmartin, *Chief*, Map Information Office
Phone: REpublic 7-1820, ext. 2446

This department has a small collection of training films of a technical nature on topographic survey subjects. The films were produced in cooperation with the Pan American Institute of Geography & History, and are circulated through the Washington, D. C., office.

U. S. Fish & Wildlife Service

Elliot A. Macklow, *Chief, Audio Visual Services*, Branch of Marketing, Bureau of Commercial Fishies, Fish & Wildlife Service
Phone: REpublic 7-1820, ext. 2151

ACTIVITIES: Using commercial contractual motion picture facilities, this organizational unit plans, produces and distributes fishery marketing and educational motion pictures sponsored by both Government and industry. Other audio-visual materials such as fishery television spot announcements, radio spot announcement disc slides, specialized publications, etc. are also produced and distributed by the Unit.

FACILITIES: Commercial contractual motion picture facilities.

DISTRIBUTION: Utilizing about 185 Government and private film libraries, about twenty fishery motion pictures are distributed free of charge upon request. Provision has been made so that most of the films are cleared for televisions, though special permission is required before telecasting. Stock footage is not available. A catalog entitled *Fishery Motion Pictures* may be obtained free of charge upon request. A central Audio-Visual Services film library is maintained in College Park, Md. Films and information may be obtained by writing Audio-Visual Service, Bureau of Commercial Fisheries, Post Office Box 128, College Park, Maryland.

PRODUCTIONS: Recent productions include *Sponge—Treasure From the Sea*, an Edinburgh Film Festival honor film; *Salmon—Catch to Cook*; *Fishing Five Great Lakes*. Two documentary motion pictures will go into production early in 1962. Tentatively titled *Columbia River Heritage*, sponsored by the States of Maryland and Virginia; and *Watermen of Chesapeake Bay*, that will be in production for more than one year.

Wilbert H. Pearson, *Chief, Attestation & Review Staff*. Phone: DUdley 3-3567

Miss Becky Sanford, *Chief, Acquisitions Branch*. Phone: DUdley 3-5651

ACTIVITIES: USIA acquires and distributes motion pictures in the overseas information program which it conducts. These films show American life and support and United States foreign policy.

FACILITIES: USIA contracts with private commercial companies to produce films to specifications and under supervision of the motion picture service. In addition, the agency contracts to use selected films in overseas programs.

DISTRIBUTION: In addition to theatrical distribution for many of these films, the films reach a wide non-theatrical audience through the 213 film operation centers at the U. S. Information Service offices overseas. In addition to the 213 film libraries approximately 300 mobile motion picture units are used to show the films. The address of the local U. S. I. A. can be obtained from any American embassy or consulate. In the United States, the USIA films are available from Norwood Films, Washington, D. C., recently awarded the contract for distribution of all U.S. Government motion pictures and filmstrips.

AGENCY FOR INTERNATIONAL DEVELOPMENT

Communications Resources Division

State Department, Washington 5, D. C.

Gerald F. Winfield, *Acting Chief*
Phone: STerling 3-6400, ext. 7143

V. M. Commeree, *Motion Pictures*
Phone: STerling 3-6400, ext. 7303

ACTIVITIES: This organization is composed of a group of specialists whose prime duties are to provide professional technical advice and assistance to a large number of functionaries working in conjunction with approximately seventy U.S. AID Missions in various cooperating countries of the free world. They are responsible for the Communications Resources program within AID, including all communications media instruction and training, the development of the media of mass communications, and the training of personnel in the professions and skills of technical information. The responsiblity includes planning, development and use of communications media ranging from hand-made indigenous devices through more complex media such as motion pictures, radio and television. Such support extends itself into all technical fields with which AID programming is involved.

FACILITIES: With respect to film productions, some missions have complete professional staffs and facilities: others vary widely in degrees of completeness. All rely on the Washington staff to a greater or lesser extent for "backstop" guidance and services.

DISTRIBUTION: Except for a limited number of films produced under contract in the United States, motion pictures, film strips and slides are made in cooperating countries and are designed for overseas distribution. Approximately fifty films have been selected for showings to Educational and Civic groups in this country. They are available upon request from Educational Film Libraries in 10 geographic locations. Further information is available from AID, or the Educational Film Library Association, 250 West 57th Street, New York 19, N.Y.

duction facilities are contracted to complete the film after the first rough cut. Training films are sometimes produced with IRS personnel and sometimes with professional talent.

DISTRIBUTION: The 62 district offices, and several of the larger local offices, distribute IRS film productions. All clearances and releases have been obtained for general showing of all IRS films.

PRODUCTIONS: IRS has two 28-minute films, 16mm color or black and white, *Since the Beginning of Time*, and *The Inevitable Day*, dealing generally with its highlight activities. A third film *Push Buttons and Taxes*, 16mm color only, 10-minutes, has just been produced and released. It deals with the forthcoming automatic data processing by which tax returns of all Federal taypayers will be handled within the next few years. Two new presentations for 1962, to be available in the fall or winter, are planned.

United States Coast Guard

Don Farran, *Chief, Motion Picture & TV Branch, Public Information Division*
Phone: WOrth 4-5305

ACTIVITIES: The U. S. Coast Guard produces information and training, as well as recruiting films. The majority are in 16mm color-sound with running time of 14 or 28 minutes. For the past three years, CG films have consistently been selected by the United States government for entry in foreign film festivals, and have won a number of awards, three films having been sent to the Edinburgh International Film Festival in 1961.

FACILITIES: In-house capability. The CG uses its own facilities, including writing, directing, shooting, and editing to final cut of its productions.

DISTRIBUTION: Distribution of the films is made through the various Coast Guard District offices and from Headquarters to television stations, schools, colleges, various organizations providing information to their members. Usually, the films are cleared for non-theatrical and television use, and no charges are made for use. An annual Film Catalog is issued by Coast Guard Headquarters and separately by each District office.

PRODUCTIONS: Recent subject matter of the films has ranged widely across the world, including LORAN stations on Pacific isles, discovery operations in the Arctic and Antarctic, Search and Rescue, International Ice Patrol, Aids-to-Navigation, Merchant Marine Safety, small boat safety operations, including training films on navigation and rules-of-the-road.

• The Library of Congress has an unrivaled collection of American films dating from the infancy of the motion-picture industry, which it has acquired through the operation of the copyright law and through gifts, and it also has a large body of foreign films turned over to it as a result of wartime seizure. The Library's activities in the motion-picture field include the registration of claims to copyright, the acquisition of films, the cataloging of films and related bibliographic service on the collection.

The Library's Copyright Office has registered claims to copyright for motion pictures since 1894, when the first examples of this medium were deposited in the Library in the form of photographic paper prints; since 1912 the copyright law has provided for the registration and deposit of motion pictures as such. Generally, under the provisions of the motion-picture copyright agreement between the Library of Congress and the motion-picture proprietors, the films are returned to the copyright proprietor by the Library after registration, but the Library has a

Film Is Helping the Fight on Bait Advertising

Association of Better Business Bureaus' "Too Good to Be True" Is Helping Inform Consumers About Harmful Practices on Fringe of Business Community

by William Maki
Director of Industry Relations
Association of Better Business Bureaus, Inc.

A NEW 20-MINUTE color film on bait advertising, titled *Too Good to Be True*, was released in January by the Consumer Education Division of the Association of Better Business Bureaus. The latest BBB motion picture was produced by Audio Productions, Inc.

Moderated by television personality Bud Collyer, the picture dramatizes and explains the "bait and switch" technique, one of the oldest problem areas known to the Better Business Bureaus.

Better Business Bureaus' Third Picture

The title, taken from a line in the script, announces the theme of the story: "When an advertised bargain sounds too good to be true . . ." This is the third in the BBB series, preceded by *The Better Business Bureau Story* and *To Serve The Living*. (See BUSINESS SCREEN, No's. 3 and 4, Vol. 19, 1958.) By definition, "Bait advertising is an alluring but insincere offer to sell a product or service which the advertiser in truth does not intend or want to sell . . ."

With thousands of case histories and fifty years of BBB experience at their disposal, the BBB Business Relations Committee decided on a double-edged approach to the interpretation of the problem. "Bait and switch" had to be explained to the consumer public in a way which would be generally palatable and non-technical.

Constructive Approach Is Emphasized

A "racket-busting" treatment would not be satisfactory. The committee also wanted to give full consideration to the positive values of advertising and selling, a theme found in other pictures of the series, and consonant with traditional BBB policy. In other words, they wanted a script which gave constructive treatment to a subject which is negative in concept. Out of discussions with writer Les Bennetts of Audio Productions came a script which warns the consumer, explaining the basic patterns of technique found among "bait and switch" operators. It also places the responsibility with the buying public, whose continued patronage of the abuse has made it a perpetual feature of the fringe market.

Because it is intended for the "layman," technical merchandising terms and hybrid refinements are avoided. At the same time, legitimate advertising and selling practices are contrasted with misleading bait techniques, so that there will be no question in the consumer mind as to the validity of honest bargains and sales.

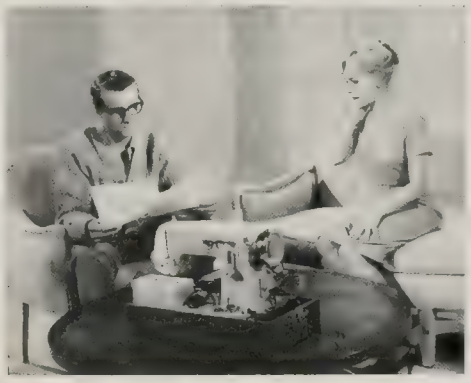
Rather than lead disgruntled customers to the complaint facilities of local Better Business Bureaus, the story attempts to enlighten them before the trouble begins. The idea behind it, again like the others in the series, is that informed customers are better for business than those who have been victimized by the unscrupulous minority. The script for *Too Good To Be True* demanded a production which would play the story with a combination of impact and sensitivity.

Sets, Actors Give Memorable Impression

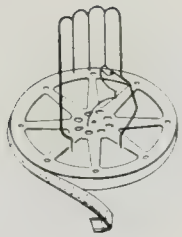
Director Erwin Scharf designed unusual sets, some of them whimsical facsimiles of merchandise called for in the story. Casting called for actors who would leave memorable impressions on the audience, without overplaying. The reason for this appears in an exchange between Bud Collyer and Herbert Nelson, playing the BBB representative:

Mr. Campbell: " . . . You see, baiters don't don't *look* dishonest."

Bud Collyer: "They don't wear black hats, like the bad guys in the TV westerns."



Mr. Campbell: "No, they look and act just like any honest salesman — in a store or at home."



As the finished production unfolds, three short dramatizations of "bait and switch" situations are shown, with commentary by Collyer and Nelson. Sid Stone plays a refrigerator salesman, attempting to "switch" shopper

Shopper Grace Carney is greeted by salesman Sid Stone is this appliance store scene from BBB's consumer film on bait advertisting.

Husband Chuck Green examines the contract for a sewing machine purchased by wife Elisa Loti in example of bait-and-switch advertising.

Business Screen Previews the Sponsored Films of the Month

Used car salesman Jim Kane looks at ad which Stan Carlson found of fantastic car bargain.

EDUCATING THE CONSUMERS: Grace Carney from a $129 "bait" refrigerator to an expensive, unknown brand. He refuses to deliver, telling her the $129 model is sold out and can't be delivered for six months.

Jim Kane appears as a used car salesman, playing opposite Stan Carlson, who wants to buy a "sensational" advertised used car bargain. Then Charles White, as a sewing machine salesman, calls on Elisa Loti, who has responded to an ad for a $19.95 rebuilt sewing machine. White disparages the machine, demonstrates that "it sounds like a coffee grinder," and convinces the young housewife that she should buy an unknown new machine at $217. When her husband, played by Chuck Green, gets home, there is a battle scene. Green can't even get the "company" on the phone to cancel, and the scene ends in tears.

Some Good Advice on Honest Bargains

Collyer and Nelson conclude with examples from home improvement sales and other situations, along with some strong advice about honest bargains and the responsibility of the buyer. After the close of the picture, and separated from it, there is a one minute trailer prepared for use with group audiences or television.

Bud Collyer interviews BBB President Victor H. Nyborg on a subject which is a basic motive for the work of the Better Business Bureaus, and the film series — voluntary self-regulation by business.

Nyborg speaks of the "more than 120 Bureaus in the United States, Canada, Puerto Rico, Mexico, Venezuela and Israel" with "more than 100,000 member firms" who are "corporate citizens helping to preserve the system which makes business, as we know it, possible and profitable."

Too Good To Be True is the first Better Business Bureau film made available for sale to business. This was done to give responsible members of the business community a vehicle to help promote self-regulation and consumer enlightenment.

Prints Available for Sponsor Purchase

Prints have been released for purchase at $200 for employee or community showings. Some corporations plan to assign prints to local Better Business Bureaus to help meet the demand for group and television distribution. Since 1958, the widespread network of Bureaus has proved an effective distribution facility, promoting showings of the previous films.

It is expected that the new picture will receive even greater attention from the public, since it has such specific customer appeal.

Research: the Sense of Wonder Put to Work

This Fascinating New IBM Picture Explores the Genesis of Basic Research

A Boy, a Beach, and the misty light of an early autumn morning.

Slipping and scrambling up a dune in a sudden explosion of curiosity. Pausing to ponder the sculpture of a sea-shell. Like a million boys on a million beaches, skimming a pebble from wave to wave. Filling his eyes with the down-sweep of a gull . . . and his pockets with a dozen minor mysteries drawn up by the tug of the tide.

What does all this have to do with giant laboratories where men probe the relationships of matter to energy . . . time to space . . . the atom to the universe?

Film Was Produced by Henry Strauss

A very great deal, according to *The Question Tree;* new thirteen-minute motion picture produced for IBM by Henry Strauss & Co. Because, as the film sums it up: "Research is the sense of wonder put to use."

This sense of wonder . . . and the use science has made of it from Da Vinci's day to our own . . . is *The Question Tree's* basic theme. To *define* what a research scientist does . . . explain why he does it . . . and show how his

Machines can be made smaller, simpler through vapor growth, metal layers only atoms thick.

work may shake and shape the world we live in is obviously beyond the scope of any film. But *The Question Tree* does convey a *feeling* of these things . . . and makes the human constant in the equations of science vivid and understandable.

With light and shadow, sound and silence, this film creates a language which expresses both the passion for precision that rules research and the deeply emotional, completely human, urges motivating men who pursue it.

But . . . the language of the research scientist doesn't lend itself to facile translation. Words like "cryogenics" or "vapor growth" aren't exactly table-talk even among well-educated laymen. And ever since that innocent-sounding question . . . $E=MC^2$ . . . exploded into the atomic bomb, terms like these have had a vaguely sinister ring.

Fear has always been the father of misunderstanding. The feeling that science is pushing us too far, too fast is widespread. While science in our society commands an awe akin to reverence, the scientist himself tends to be thought of as not wholly "human".

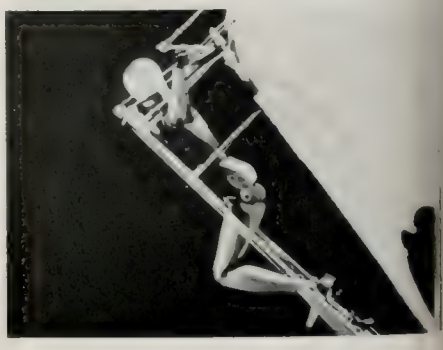
The practical returns from pure research

"Out of a million questions in the Univer which are ready to be answered . . . which c of value? Questions, like seeds, must ripen . . .

are also difficult to predict. Often, many ye must pass before promising projects produ anything but expensive price-tags.

Finally, from a film-makers standpoint, t research laboratory leaves a good deal to desired. A computer at work just doesn't ma a very dynamic visual.

Used Combined Talents of Four Arts



Fortunately, the motion picture, used cr atively, puts at your disposal the combin *ability to communicate* of painter, poet, pla wright, and musician. In this film, all four we needed . . . plus the ability to strike aw from conventional film techniques and gi the camera free rein.

The result is a film of quick and sha transitions. Scenes . . . moods . . . tempos . colors . . . even ideas give place to one anot er with a seemingly total lack of respect f classic dramatic disciplines. But the film h a basic unity . . . because every sequence w written, shot, and edited with one guidi principle. Strip away surface details . . . foc on the central thought behind them . . . a illustrate that thought with the simplest, m striking visual or narrative symbol availab

For example . . . move from the boy the beach to the teeming universe within single drop of water; and in a moment y convey a sense that *everywhere* lie limitl horizons still to be explored . . . a feeling th every answer opens up new questions.

Take an ancient map where the unkno

Leonardo da Vinci in 1495: "Now, having s served the birds in the air, I ask what are t mathematical rules of flight?"

as dismissed with the legend "Here There e Dragons." Counterpoint it with a model hereby Da Vinci sought to learn the mathematical rules of flight . . . and you bring to ght the long, slow growth of the scientific ethod.

Capture with your camera . . . half in ght, half in shadow . . . the clutter of centries jumbled together in an antique shop. wiftly and simply you've synthesized the normous problem created by our rapid acmulation of facts . . . given life and meang to what the scientists call "data storage nd retrieval".

Take a relatively static process like vapor-owth . . . or an infinitely complex structure ke a human cell. You can't give movement to e one . . . or simplicity to the other. But ou can so visualize both that their striking semblance to abstract painting and sculpture aps from the screen. And you illustrate unistakeably that the scientist . . . like the tist . . . works to uncover the pattern that hifies everything in nature.

IBM has a machine that will translate an ticle from Izvestia into understandable Engh. The actual process by which this is acomplished can't be photographed with either sual interest or clarity. But it can be *symbolzed* in dancing, whirling patterns of light acompanied by an accelerated, scrambled sound ack. At the same time you've shown an imrtant practical application of pure research.

Approaches like these made it possible for e Strauss organization . . . working with e IBM Film Department . . . to complete *he Question Tree* in three-and-a-half months om start of research to delivery of 35mm swer print in color. They also met IBM's in objectives in commissioning the film. One is to show its stockholders at their 1961 nnual Meeting how deeply the company is engaged in basic research over and above oduct development. The other was to create public relations vehicle that would enhance mpany prestige . . . *and* perform a valid blic information service.

Release so far has included in-company owings, key customer groups, and picked ucational institutions. Plans are now underay for more general public exposure . . . st theatrical, and then via television. The sponse so far gives every indication that *The uestion Tree* may be one of the most import-t, well-received films of the year.

"he long journey of the human race . . . driven the restless passion to explore . . . by the nse of wonder, and always . . . the questions."

Aerial shot of Waikiki shows many new buildings erected in recent years.

Hawaii Travel Film Is a Real Selling Tool

Travel Agents Across U. S. Find That "Hawaii Was Never Easier to Sell"

TRAVEL FILMS ABOUND in glamour and their appeal to armchair gadabouts is noteworthy — but a new 42-minute color film sponsored by the Hawaii Visitors Bureau has the first truly "different" slant on travel promotion seen in many years!

Hawaii Was Never Easier to Sell, produced with the fine sense of scenic framing and artistry that set Cate & McGlone apart among makers of airline and outdoor pictures such as this, is specifically aimed at a nationwide audience of travel agents and has been shown to them in 17 cities across the country. It describes island facilities in detail, including the number of rooms available, rates, etc. Aimed to promote Hawaii tourism in '62 among the key men and women who can do the most good, this Visitors Bureau effort is "on target" and winging away.

Sunbathers, a beached catamaran and outrigger canoes are glimpsed in telephoto shot from the film along famed Waikiki beach.

Initial showings to agent groups on the west coast were highly successful and quickly brought follow-up screenings in Midwest and Eastern cities. Once planned for video tape presentation, the Bureau turned to color film as a much more flexible and the *only* medium which could serve both closed-circuit and projection audiences within budget and time.

In just three weeks, Cate & McGlone turned out this picture replete with important live action sequences, plus a large amount of film from the studio's extensive Islands' library. Featured are Webley Edwards, radio network star of "Hawaii Calls;" Fred Clark and Bea Benadaret, both well-known television performers.

Edwards, as narrator, points up the new hotels, restaurants, transportation, shops and entertainment now available in Hawaii. The film also covers the scenic beauty and new resorts on the neighbor islands of Hawaii, Maui and Kauai. Clark plays the role of a frustrated travel agent and Miss Benadaret acts as a very vexing customer.

Hawaii Was Never Easier to Sell — and this kind of direct, uncompromising use of the visual medium will make the Island State even more inviting to America's enterprising travel agents. Why doesn't somebody unveil this kind of picture for *really serious* traveler audiences? There's enough glamour in Hawaii's picture *plus* the kind of facts you really want to know before making a travel *and* budget decision. Let's have more like it!

Royal Hawaiian Hotel is in left foreground of this aerial shot; Moana Surfrider Hotel is near beached catamaran at the right . . .

Van Praag Aids Clients by "Instant Casting" Via TV

☆ Van Praag Productions has installed a complete closed-circuit TV system on the premises at 1600 Broadway, New York for the purpose of inaugurating a service to advertising agencies and clients, which, for want of a better name is called "Instant Casting."

The new set-up gives viewers a chance to have a remote transmission center for on the air viewing of motion pictures, slides and filmstrips. A small audition studio has been equipped with a television camera and it is possible, through the inclusion of three monitors located in separate parts of the office, to have producers and clients see actors and narrators on the screen in front of them during an audition.

William Van Praag, president, said the new system in his shop will save valuable time and help bring about quicker casting decisions.

To test the equipment and its workability, last month, on one working day more than 50 actors and narrators were auditioned and in six cases, final selections were made on the spot.

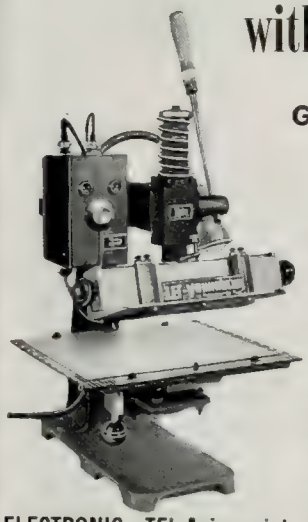
Klaeger Associates Formed With Staff of 32 in New York

☆ Robert H. Klaeger Associates, Inc. has been formed at 35 West 45th Street, New York. The new firm, which will specialize in motion pictures for industry and television, is composed of a permanent staff currently of 32, most of whom joined the company at its inception after the break-up of Transfilm-Caravel, Inc., at the year's end.

Many of the staff were with Bob Klaeger in his highly successful production firm of 1957-1960, including John Fenton, Steve Kambourian and Dave Quaid. In fact, Klaeger's business seems to be going on very much as usual after the year's unhappy hiatus at T-C. During the firm's first 30 days, 26 TV commercials for New York's top advertising agencies went into production.

Allied with the New York concern is Robert H. Klager Associates of California, Inc., under Robert Drucker, with headquarters at Republic Studios, 4024 Radford Avenue, Studio City.



Form Synchro-Sound in N.Y.

☆ A new firm, Synchro-Sound, Inc., has been formed at 24 West 45th Street, New York, by Winston Sharples, Jr., president, and Harold Robins, vice-president.

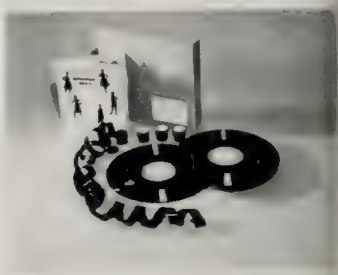
Filmstrip Kit on Modern Sewing for Schools

☆ An interesting new kit of teaching filmstrips on modern sewing methods is now being offered to schools by Training Films, Inc., New York.

Called *Fashion Sewing . . . the Bishop Way*, the filmstrip kit features the system developed by Mrs. Edna Bryte Bishop, widely recognized from the success of her workshops and acclaimed since the publication of her best-selling book on fashion sewing.



A scene in "Fashion Sewing"

The films are partly sponsored by five leaders in the home sewing industry: Advance Pattern Company, Coats & Clark, John Dritz & Sons, J. C. Penney, and Talon. These companies have underwritten part of the production cost of the films, thus making them available at a most reasonable rate. However, the filmstrips are pedagogically pure and non-commercial.

The complete kit includes four filmstrips of approximately 55 frames each, photographed in color, two double-face 12-inch 33-1 3 RPM discs, and a complete teacher's guide with the descriptive narration from the discs, boxed in a library-size container for storage and protection.

Titles of the films are: (1) *Basic Learnings*, (2) *How to Make a Simple Skirt and Blouse*, (3) *Cutting to Fit, and Fitting*, and (4) *How to Make a Simple Dress*.

Here's the complete sewing kit.

Bishop Method sewing kits are available at $10 each from TFI, 150 West 54th Street, New York.

Human Life Values Is New Insurance Marketing Film

☆ A significant film development in the insurance industry comes from the Institute of Insurance Marketing, Southern Methodist University, Dallas, Tex., in a 28-minute, full color, 16mm motion picture entitled *Human Life Values*.

Featured in the film is C. E. (Chuck) Gaines, director of the Institute, giving his presentation of Dr. Huebner's famous concept of legal reserve cash value life insurance — exactly as it has been presented to thousands of agent students of the Institute for over 15 years.

The Institute reports the film is not only a sales education aid but has been carefully produced for public education as well.

Preview prints are available on request either from the Institute or the film producers, Carlocke Langden, 2808 Oak Lawn, Dallas 19, Tex.

Robert Fisher
Productions

If you're looking for a modest-budget film that looks like it cost a lot more money, look for Bob Fisher.

He has produced motion pictures and filmstrips for American Motors, Bendix, Burroughs, Chrysler, Dow Chemical, Frigidaire, Stran-Steel, Dura, and a few others. Most of these films look like they cost a lot more money than they did.

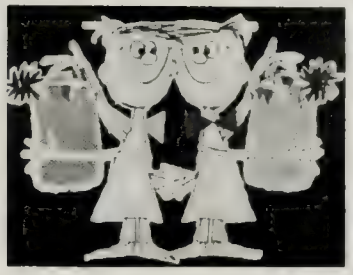
Helping Retailers Put "Profits in the Bag"

SPONSOR: The International Paper Company

TITLE: *Profits in the Bag*, 12 min, color, produced by Elektra Studios, Inc.

International Paper sells good sturdy bags to supermarkets — but even the very best bag can tear or burst if it is improperly packed. Unfortunately a great many bags are packed by part-time



checkers — often clumsy, if good-natured kids. If these kids could be taught, somehow, to pack those bags better — International Paper would have happier customers, sell more and more bags.

So, to reach the checker and hip him to the real jive of bag packing, International Paper is offering a film which goes through the whole procedure informatively, entertainingly and repeatedly, so it will stick in.

The style is molded closely to the sponsor's last — it is "animation" but with sprightly paper cutouts — animated paper dollies, if you will — in brilliant luminescent colors. The narrator is Frank Gallup, whose pseudo sombre voice is familiar to all youthful fans of the Perry Como show, and the modern music is original from the pen of (and under the baton of) Raymond Scott.

Because the bag-packing training sessions are envisioned as often being before — or after — hours, it was felt that the film would have to be amusing to get past the teen-ager's traditional resistance to this kind of good advice.

But when the bongos come on strong and Gallup intones "Fit the load for the road", "Wet means trouble, wrap it double", "Chemicals in the sidecar" and other

groovy check-out mottoes, it is highly likely that the kids will give ear and remember a line or two.

Benefits of Dry Bulk Cargo Handling Pictured by Butler

☆ The Butler Manufacturing Company is showing the advantages of its dry bulk trailers and their impact on the transportation of dry, flowable products via a new 15-minute color motion picture, titled *Shipping Containers on Wheels*.

The picture features a variety of industries served, including food, construction, chemical and cement with dry bulk deliveries ranging from pulverants to granulars shown under actual conditions. The film is available on letterhead request to appropriate companies via Butler hdq. at 7476 E. 13th St., Kansas City 26, Missouri.

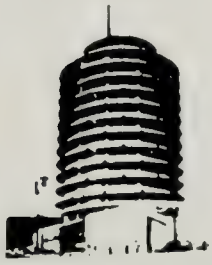
DO YOU KNOW WHY
MOTION PICTURES SELL?



The power of motion pictures to motivate people has never been better explained than it was in L. Mercer Francisco's recent book, "The More You Show, the More You Sell". We thought so much of his chapter on motion pictures that we obtained permisson from the publisher to make some reprints. If you would like a few, just let us know.

As we enter our 35th year, we are proud to have the largest film production staff and facilities in the Pacific Northwest. Complete 35 and 16 facilities including creative ideas, script, photography, music, Westrex sound recording, art, animation, editing, interlock.

Filmstrip Series For Remington's Salesme

☆ Remington likes to point out to retailers that there is a vast untapped market for portable typewriters. Unlike TV sets—or other appliances of near-saturation—70 per cent of American families do not have typewriters, yet most of them are pretty good prospects for the alert salesman.

To translate these statistics effectively and present them interestingly, the Remington Portable Typewriter Division of Sperry Rand Corporation is now using three new filmstrip presentations produced by Rossmore Productions and titled *The Remarkable Remingtons*. Field men are carrying these 10-minute color and sound films into retailer's stores across the country on Salesmate portable projectors.

Shows Four Stars in Line

Film number one in the series is about the product. *Remington: First Name In Typewriters* shows the four stars in the line—Holiday, Starfire, Monarch and Fleetwing—and it describes, with clever combinations of art and photography, the unique features which have made them outstanding in their field.

Making the Most of Your Market, the second film, shows how retailers can improve sales and profits while making their business life easier. Over a million portable typewriters are expected to be sold in 1962—lots of them Remingtons, for Remington (with the first machine on the market in 1873) is growing apace. Sales went up 72.3 per cent last year.

Market Know-How Behind It

The company knows what most customers want (bright colors, modern styling, mechanical excellence) and it has the product and the sales aids to help the retailer reap a bountiful harvest from this rich market potential.

Film number three—*Merchandising*—goes over Remington's scientifically planned campaign, national and local, to build a demand for portable typewriters. It advises retailers to back Remington's many messages with their own ads—especially in highly productive but low cost local school and college papers.

Slidefilm Tells Public About Los Angeles Welfare Council

☆ *Design for Action*, a 14-minute sound slidefilm has informed many Los Angeles people about what the Welfare Planning Council, Los Angeles Region, does in its year-round work.

The film made the job of explaining WPC's services much easier, said Kathy Mays, the council's director of public information.

The film tells the whole story — what a council does, how it works, who participates, and how it is supported. The film covers WPC's progress in planning for some 900 health, welfare and recreation services in the Los Angeles area.

With flashbacks covering the council's activities when it was organized in the early 1900s, the film highlights present work with such community problems as urban renewal, mental health and the aged.

Design for Action is a 35mm, 14-minute filmstrip with 86 frames of photography and artwork in vivid color. A 12-inch, 33 1/3 LP record, adaptable for both manual and automatic projectors, accompanies the filmstrip.

Produced as a package deal by Doug George Associates, Los Angeles, with the WPC staff providing resource material and the

Record 50-Millionth Viewer for "The Mayflower Story"

☆ The motion picture story of Mayflower II's re-enactment of that historic earlier voyage, first released in October, 1957, has recently certified its 50 millionth viewer. Sole distributor of *The Mayflower Story* through these years has been Modern Talking Picture Service, Inc.

50-millionth viewer is commemorated by Aero Mayflower president, John Sloan Smith (left) as he presented inscribed photo of Mayflower II to Mrs. Fred Poor. Arthur R. Bach, vice-president of Modern Talking Picture Service, looks on.

Commemorating that enviable audience record, a ceremony was held at the English-Speaking Union in Chicago where an inscribed photograph of the Mayflower II was presented by John Sloan Smith, president of Aero Mayflower Transit Company, sponsor of the film, to Mrs. Fred A. Poor, vice-president of the Union's Chicago branch.

Pace Productions To Make Pacific Finance Sales Film

☆ Pace Productions, Inc., Los Angeles-New York audio-visual consulting firm, has announced it will develop an audio-visual sales and training program to augment existing procedures for Pacific Finance, consumer financing company, and its affiliates, Pacific Fidelity Insurance Co., and Olympic Insurance Co.

Earlier this year, Pace designed and produced audio-visual divisional reports. These were shown to the Transamerica Corporation board of directors to acquaint them with Pacific Finance corporate development and services. Pacific Finance and affiliates were recently acquired by Transamerica. Pace is producing two more films that will serve as a progress report to 5,000 employes of the company in 450 branches in the U. S. and Canada.

Paris Office for Van Praag Begins Expansion Overseas

☆ Van Praag Productions is now engaged in the first phase of an overseas expansion program. A Paris office has been opened at 127 Champs-Elysees, Paris 8.

Elliot Saunders will head the operation in France. Before the year is out it is hoped that a similar arrangement will be made to get office quarters and a representative on the scene in London.

According to William Van Praag, president of the firm, an ever increasing exchange of ideas and contacts involving the high fashion world has made it necessary to service clients with production facilities in Europe.

Van Praag Productions maintains offices in Hollywood and Detroit as well as main headquarters in New York.

Four Musifex Sound Effects Records Available at F & B

☆ "Musical" sound effects LP records produced by Musifex, Inc., are now being sold by Florman & Babb, Inc., New York.

The records have been moving so briskly for the past several months, according to Musifex president, Bob Velazco, that the establishment of an F & B dealership should make them even more readily available to future customers.

The "musical" sound effects records — four 33 1/3 rpm sides on two 12-inch discs — are proving to be most useful to motion picture, radio, TV and slidefilm producers for such purposes as animation sequences, comedy accents and product "pop-ons."

The records are sold for $12.50 each and include all rights — no licenses or royalty payments required.

Further information may be had from Musifex, Inc., 45 West 45th Street, or Florman & Babb, Inc., 68 West 45th Street, New York.

FINE ARTS PRODUCTIONS, INC.

Pioneers in scientifically accurate 3-dimensional space films . . .

Carl V. Ragsdale

Ragsdale to Head Eastern Production for Roland Reed

☆ Roland Reed Productions, Hollywood, pioneer producer of motion pictures for industry and television, has appointed Carl V. Ragsdale as Vice-President. In his capacity, Mr. Ragsdale will be in charge of sales and production in the East, with headquarters in New York.

In augmenting his Hollywood studio operation, Roland Reed, president of the firm, said the opening of an Eastern facility is in keeping with his plans for added service to his advertising and industrial clients.

The Roland Reed "banner" has been on credit lines of more than 1,000 filmed programs for television, representing over $25 million in production costs. Some of Reed's best known programs include *My Little Margie*, starring Gale Storm and Charlie Farrell; *Waterfront*, with Preston Foster; *Trouble with Father* starring Stuart Erwin and June Collier; *Mystery Theater*, featuring Tom Conway; *Beulah*, with Ethel Waters; and *Space Ranger*, with Richard Crane.

Mr. Reed estimates that the firm, founded in 1936, has also produced over 325 motion pictures for industry and government, and well over 500 television commercials.

Horton Joins Norwood Film Studios as a Vice-President

☆John E. Horton has joined Norwood Film Studios, Inc., Washington, D. C., as a vice-president, Philip Martin, Jr., president, announced.

Horton has 16 years of experience in all phases of motion pictures. He was with Warner Brothers Studio in Burbank, Calif., following five years of military service in World War II. In 1948, he went to Washington as Chief, Pictorial Division, Public Information Division, Department of the Army, moving in 1949 to Chief of Motion Pictures in the Office of the Secretary of Defense. In 1949, he was detailed also as a White House aide.

John E. Horton

Later he went to California with Universal Pictures Company, where he was a production assistant to the vice-president in charge of production. Horton returned to Washington in 1958 as consultant in the Office of Chief of Research and Development of the Army.

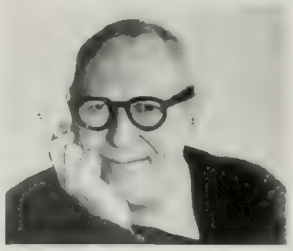
News Along the Film Production Line

Camera Equipment Announces Burt Zucker Memorial Award

☆ To commemorate the late Burton Zucker's contribution to the film industry, and at the same time to give deserved recognition to a class of creative talent that too often goes unhonored and unsung, Camera Equipment Company has announced, the Annual Burt Zucker Memorial Award. This will include a $1,000 cash prize, plus a suitably inscribed trophy, to the cameraman from Local 644, IATSE, who is judged to have done the finest cinematography during the previous calendar year.



The judging will not be done by Camera Equipment Company, but by a committee appointed by CECO, with the advice of the officers of 644. The first award will be made early in 1963 for 1962.

There are no restrictions on the type of work done. Outstanding film, whether it is in the area of theatre motion pictures, commercial pictures, documentaries, education films or TV, is the only requisite. The name of each year's winner will be further inscribed on a placque to be displayed at the union headquarters. Further data on applications will soon be announced.

Saizis Brothers Specialize in Teamwork

Shoot Top Pictures on Wide Range of Location Assignment

A TEAM of veteran cameramen, backed up by a highly-experienced crew, is responsible for some recently-successful motion pictures in a variety of fields. They are two brothers, Ted and Vincent Saizis, who make their headquarters in Birmingham, Alabama but more frequently find themselves "on location" for an industrial film assignment, a television news series, a wide-screen color entertainment feature or a "special" for one of the country's studios who frequently call upon the Saizis' talents.

The Saizis Brothers in action on scene for "Temperatures Made to Order" with Doug Edwards (at right) in this Harrison Radiator Division 16mm color and sound picture.

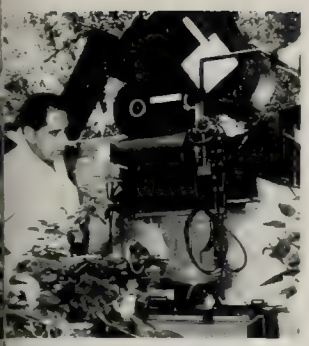
20 Years of Experience

What does it take to meet a wide latitude of "challenges?" If experience counts most, Ted and Vince Saizis have tallied over 20 years behind the lens. They are veteran members of IATSE Local 666.

And if it depends on the quality and quantity of equipment to meet the many varying kinds of location work, the Saizis' team rolls with a 32-foot Fruehauf equipment van, backed up by one-ton sound and panel trucks (equipped with camera platform). They carry Ampex, Mitchell, Bell & Howell gear in both 16 and 35mm types and know that each job potentially requires maximum lighting and grip equipment.

Around this nucleus of Saizis experience, the brothers have gathered other veterans — their gaffer has been lighting films since 19; chief grip and construction supervisor is an industry "top hand". Another "vet" is in charge of sound. The combination has been brought together over a long period and it works like the well-oiled machine it should be.

"Bayou" Won Critical Acclaim



From the newsreels of the 30's, the Saizis brothers began filming short subjects, two of them for Warner Brothers in the 50's, and also worked as second unit cameramen for other major film companies. Their film, *Bayou*, lensed in 1956 in the Cajun country of Louisiana, earned many plaudits from trade, magazine and newspaper film critics when it was released through United Artists.

Their work came to the attention of sponsors, like General Motors, (for whom they have filmed several Motoramas in color for theatrical release). Another GM (Harrison Radiator Division) sponsored picture was *Temperatures Made to Order*, a 27½-minute color film for educational release, narrated by Douglas Edwards. The subject covers all phases of the division's manufacturing, testing, engineering and liability activities. In a segment filmed at Birmingham, narrator Edwards explains the basic principles of heat transfer.

Wide Variety of Assignments

From heat transfer to the *Chez Trace*, (an historic feature) to the mammoth job of lighting and filming a cave at Natural Bridge, Tenn., is all in the line of

ent Saizis is pictured with one this service company's many es of camera equipment.

ing challenges for Ted and e Saizis. There's a special rea- why you'll find them in Bir- gham, Alabama when they 't out in the field . . . it's home town and they like the g!

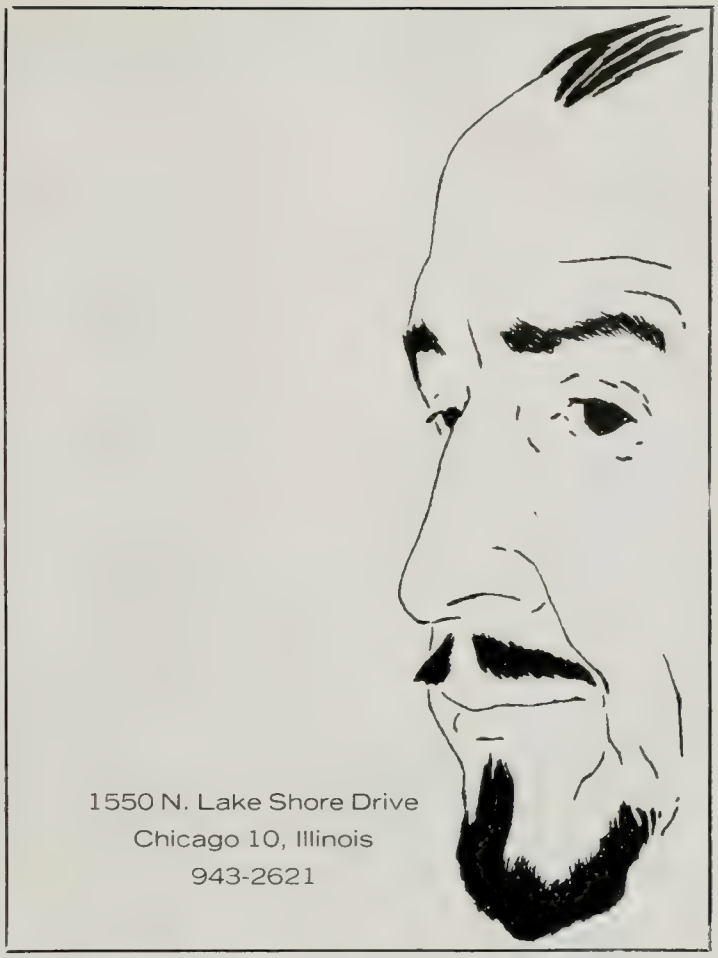
Studio in Australia Wins a Co-Production Assignment

☆ A co-production arrangement between Cambridge Film and TV Productions, Ltd., Victoria, Australia, and Marathon International was sparked by the 11th BUSINESS SCREEN *Production Review*.



This was noted recently in a letter from E. G. Morcom, general manager, Cambridge Film, to the publisher of BUSINESS SCREEN.

Partly through Cambridge listings in Business Screen Production Review "we were given an assignment by Konstantin Kalser, president and executive producer of Marathon International, for Melbourne footage for his film *The Purest Treasure*," Morcom wrote.

Marathon's extensive shot list included all types of situations, in and around Melbourne; also factory interiors of a Volkswagen plant.

The testing aspect of this operation, Morcom wrote, was brought about by the fact that "we did not see any rushes of the material after we shot it, as the thousands of feet of Eastman color negative we photographed were processed by a New York laboratory which meant an exacting test for Cameraman John Atkinson.

"We appreciate that this type of co-production arrangement was sparked off by your comments."

★ **Ability** Indicated by awards — Proved by results

Visual Exhibit Techniques at the Seattle World's Fair:

(FEATURE CONTINUED FROM PAGE FOURTEEN)

planets, then riding through the Milky Way to explore other galaxies. The journey takes in a billion light years of travel in a 12-minute motion picture exhibition.

For the first time, the Spacearium offers a motion picture technique of sufficient scope to match the new dimensions to which man's imagination is expanding. Through the use of ultra-wide-angle lenses, this show presents its image on a screen built in the form of an all-encompassing dome. It measures 78 feet in diameter and stands 39 feet high.

Image Completely Encircles the Audience

A standing audience of 700 will be completely encircled by the image projected from the center of the theater's floor. Horizontal projection coverage takes in a full 360°. Vertically, the image is projected to 160°. The resulting picture completely surrounds the audience and covers all visible area starting at 10° above the horizon.

The "route" of the Spacearium show's flight is purposely large in scope so as to portray the vastness of space and to illustrate that man is just on the threshhold of this new type of existence. Because knowledge is a keynote of the entire USSE, a panel of experts was retained to document the showing and to counsel with the producers during every phase of the show's planning.

An Outstanding Achievement in Animation

The actual film, probably the outstanding achievement to date in animation and stop-motion photography, is being created by Fine Arts Productions, Inc., Hollywood. Because of the size of the screen to be covered, this animated show was produced in 70mm. Believed to be the first show of this type done in 70mm, the Spacearium presentation will couple conventional animation techniques with live-action, stop-motion photography of models. Animated, background and stop-motion sequences are filmed separately and combined in a single release print.

As the Spacearium trip begins, the receding Earth is pictured through stop-motion photography of an actual model of our globe. Then, the spaceship approaches, circles and passes the moon.

In filming these sequences, models of the Earth, moon and sun have been positioned on the studio floor in the proper relationship to each other. In this sequence, the camera represents a spaceship. It is moved about a quarter of an inch for the shooting of each frame. Then the planets and the sun are adjusted in scaled perspective.

Conventional animation techniques — with the cels scaled to fit the size of this show — have been used to depict the phenomena of space. Individual cels for this animation job are as large as five feet square.

This survey of the Seattle World's Fair will be concluded next issue.

U. S. FILM PROGRAMS

The Library of Congress:

(CONT'D. FROM PAGE HUNDRED EIGHTY-EIGHT)

right to claim the deposits for its collection later.

The Copyright Cataloging Division of the Copright Office prepares a semi-annual *Catalog of Copyright Entries: Motion Pictures and Filmstrips*, which lists all such materials registered for copyright in the United States and which published by the Library and sold by the Government Printing Office. It has also prepared four cumulative catalogs entitled *Motion Pictures* which together cover registrations of films for the years 1894-1959 and which are for sale by the Government Printing Office.

In addition, the Library's Descriptive and Subject Cataloging Divisions catalog educational films, using data submitted largely by producers and distributors, and the Library publishes this cataloging information in two useful forms for purchase by other libraries or individuals. One form is the printed catalog card, which any film-user may purchase to establish his own card-catalog for the control of his collection and for the dissemination of film information. The other is a book-catalog reproduced photographically from the printed cards and containing a detailed subject-index, adequately cross-indexed, entitled *Library of Congress Catalog — Motion Pictures and Film-Strips*, this publication is issued quarterly and in annual cumulation, and it also appears as a volume in the quinquennial cumulation of the Library's *National Union Catalog*. Both the printed catalog cards and the book-catalog may be purchased from the Card Division, Library of Congress, Washington 25, D. C.

The Library's collection of motion pictures now comprises more than 126,000 reels and is in the custody of the Prints and Photographs Division in the Reference Department. It is primarily an archive in nature, and reference service is limited to scholarly research. The Library does not lend motion pictures, but some films may be copied under certain conditions; copying requires the signing of a standard loan agreement concerning the selection of laboratory, the clearance of copyright, insurance coverage, and the copying of equivalent footage for the Library.

The National Archives

May E. Fawcett, Motion Picture Branch
National Archives
Phone: WOrth 2-2513

• This branch has an increasing amount of retired government motion pictures (about 50,000 reels at present). Films are available for viewing by anyone. No films are reproduced without the consent of the depositing agency.

☆ Not an agency of the U. S. Government but an active user of films is:

ORGANISATION FOR ECONOMIC COOPERATION & DEVELOPMENT

Regional Office: 1346 Connecticut Avenue, Washington, D. C.

Mabel Le Fevre, *Films Consultant*

Phone: DUpont 7-4237

• OECD selects technical training, scientific, educational, business management, labor relations and sales films for inclusion in the Paris reference library of OECD for distribution among the 20 member countries. This organization has two offices, one in Washington and headquarters in Paris, which deal with the productivity centers in the governments of member countries.

uide to A and B Editing" Available from Movielab

Detailed background for the producer is offered in a convenient, well-illustrated new booklet titled "The Movielab Guide to and B Editing," currently being de available (on company or anization letterhead request) Movielab, 619 West 54th St., w York 19, N. Y. The booklet ers technique for preparing A B rolls, 16mm negative and ersal color and black and white as well as techniques for 35 negative color and black and te stock. A well-defined "gloss- of terms" used in the pamet adds clarity to a useful piece literature.

dio-Visual Insurance Selling scribed at Sell-A-Bration

A Sell-A-Bration for life inance agents in the Milwaukee was sponsored recently by Milwaukee Association of Underwriters and the Milkee Vocational and Adult ools.

Howard Turner, sales manager the audio-visual division, Dune Corp., was one of the tured speakers. He told how development of the self-con-ed, audio-visual unit with its built-in TV type screen has ed a major revolution in the ng of insurance.

ffectively produced sound films projected on this type equipment present a sales dy to the customer that is new, amic and motivating.

urner explained that the ques- is no longer whether or not modern method of sales comnications should be used but or can it be used to best adtage.

e told how thousands of ts representing hundreds of panies are selling more inance, that stays sold, faster easier.

Results have been so phenoal," said Turner, "that many panies are planning their sales ram around the use of a comsponsored film presented on ip-top slidefilm projector."

You get so busy helping other people reach anniversaries, you almost let one of your own slip by.

You see, fifty years ago this year The Jam Handy Organization was founded to help people of leadership in the clear communication of public information, personnel instructions and good ideas . . . ideas like the first office machines and the first electrical appliances . . . the first coin telephone and the first self-starter . . .

. . . And a host of ideas about new things in cars and soft drinks, military ordnance and good salesmanship.

No, we didn't create the appliances—nor the ideas. Nor even help. But we did develop ways to introduce them to people. To build appreciation for them and show how they work. And how to keep them working.

Why? Because even good ideas aren't necessarily self-propelled. They take proper presentation and explanation. They thrive on a deft mixture of persuasiveness and romance. They require selling an training of salesmen and the training of the men who need tenance skills.

Looking back now, we're proud to have helped so many custo invest upward of a hundred and fifty million dollars in clear memorable group communication.

And grateful for the privilege of helping good people get good ideas across.

That's something we *don't* forget.

Ansco sets America's standard of low contrast 16mm color with...

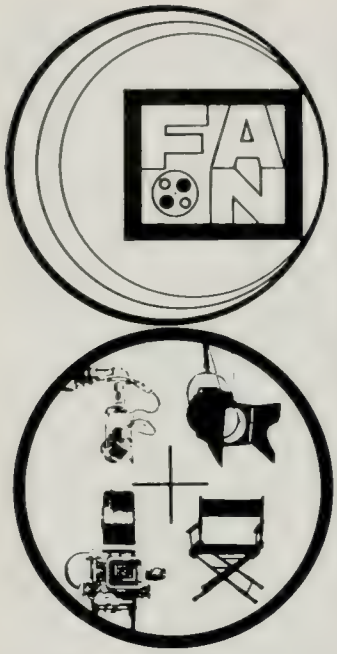
Anscochrome® Type 242 Professional Camera Film

Type 242 meets the standards of quality for the "pros" who know. Its unique characteristics: low contrast and fine grain . . . ability to record shadow detail (not just hint of it) . . . and outstanding color response produce release prints that are superior in sharpness and color fidelity. Film speed is 25 for a 3200K tungsten light balance. For full details, ask your Ansco man.

ANSCO—America's first manufacturer of photographic materials . . . since 1842.

Ansco
Binghamton, N. Y.

Anscochrome Type 242



Now you can double the value of your business films.

Double the *use* of your business films and you double their *value*. Simple? It's even simpler to use the Videotronic 8, MPO's new, automatic 8mm sound projector. You and your staff will really use *this* motion picture projector — and your films! You'll find it easy-to-operate, easy-to-carry, easy-to-watch, easy-to-maintain, easy-to-own. It's the lowest priced repeater on the market. Or, if you wish, lease-use available on low-budget monthly rentals. (As low as $1.00 a day!) And rentals may be applied against purchase price.

MPO will also convert your 16mm or 35mm films to 8mm. The nation's largest producer of TV commercials and sponsored films for industry, MPO can produce effective low-cost films for your Videotronic 8. For further details, just drop a note to Judd Pollock, MPO, 15 East 53rd Street, New York 22, N.Y. Or call TR 3-7000 in New York. There's no obligation, of course.

Bell & Howell
NEW SPECIALIST
FILMOSOUND
makes your films look brighter, sell harder!

34% brighter!

than the average 16mm projector! You have no more problems putting on a brilliant, convincing, sound film demonstration—even in rooms that can't be completely darkened. The Specialist Filmosound's exclusive system captures more light, makes images sharper, colors more vivid...puts more punch in your films than they've ever had before.

20% lighter!

than any other major audio-visual projector! Yes, the Specialist Filmosound is ready to hit the road with your sales force. Salesmen like to take this lightweight champion along—it helps them do a better job, is tough enough to stand heavy use and hard travel.

far easier to use!

with no special training required. Sales people use the Specialist Filmosound with complete confidence...are able to keep their mind on making a sale, not running a projector. It sets up in less than a minute. Rewinds fast and easy without changing reels. Eliminates embarrassing film stoppages and delays with an exclusive Lower Loop Restorer. See how your films can do a more brilliant, more effective job for you with the easy-to-use, trouble-free Specialist Filmosound.

2 booklets help you stretch your budget, do a more effective job with sound films

One brochure shows how you can lease any quantity of projectors . . . for long or short terms...and apply up to 100% of lease fees to purchase. The other booklet shows where and how industry uses sound films to build profits . . . includes 10 questions to ask before buying any projector. Send the coupon. See how your Bell & Howell representative can tailor a plan to your requirements.

Everote Succeeds Mitchell as President of EB Films

☆ Dr. Warren P. Everote has been named president of Encyclopaedia Britannica Films, Inc., according to EBF Board Chairman William Benton.

With EBF since 1946, Dr. Everote succeeds Maurice B. Mitchell who was elected president of Encyclopaedia Britannica on April 11. He has recently served as vice-president in charge of EB Films' research and production.

Dr. Everote received his bachelor's degree in chemistry and history at UCLA in 1935 and master's degree there the following year. His doctorate was awarded by Teachers' College, Columbia University, for work in the natural sciences. He has served as a high school science instructor, an associate instructor in chemistry, an instructor in physics and finally as instructor in science education and instruction at Columbia University.

During World War II he was in the Navy's Bureau of Personnel, and in Ordnance and Aeronautics.

Born in Farmington, Minnesota, the 48-year-old president of EBF is a member of numerous professional societies including the National Association for Research in Science Teaching. Dr. and Mrs. Everote and their two children live in Deerfield, Illinois.

Standards for 8mm Sound on SMPTE Convention Program

☆ More than 1,000 engineers and technicians from the motion picture and television industries took part in the annual SMPTE Convention in Hollywood April 30-May 4.

Los Angeles County Board of Supervisors' Chairman, Ernest Debs, welcomed convention delegates and presented a citation to president John Servies, head of National Theatre Supply Corp., in recognition of the technical contributions the Society's members have made to the advancement of the motion picture and television arts.

The keynote speech delivered by Cinerama executive vice-president Max Youngstein at the opening luncheon was titled: "Hollywood's Disregard of Research and the Price It has Paid For that Disregard."

In addition to papers on advances in color and the space and military applications of photography and television, other important items on the agenda were [illegible] cussion and analysis of 8mm s[illegible] on film which will make pos[illegible] rapid expansion in setting st[illegible] ards for the industrial and ec[illegible] tional fields; a new high qu[illegible] color negative and film; and a [illegible] liquid gate projector that [illegible] nates scratches.

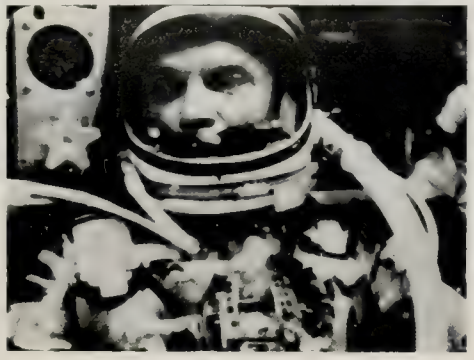
"Mastery of Space," Official Film of Glenn Orbital Flight, Released for 16mm Showings

☆ The National Aeronautics and Space Administration's official film of America's manned space flight project, *The Mastery of Space*, is now in wide-scale distribution through all offices of Association Films, Inc.

The hour-long film contains footage never seen before of Astronaut John Glenn's orbital flight. It shows the Astronauts' training program, scenes inside a spacecraft during flight, wind-tunnel tests to determine the shape of the Mercury capsule, highlights of Alan Shepard's Freedom 7 flight and views of the earth from various distances. Filmed sequences explain weightlessness and animation depicts orbiting and re-entry of a spacecraft. The picture was lensed at Cape Canaveral, the Marshall Space Flight Center at Huntsville, Alabama, Goddard Space Flight Center, Greenbelt Maryland, and at tracking stations throughout the world where contact with Glenn and his Friendship 7 capsule was maintained during his triple-orbit.



The Mastery of Space explains that the NASA Project Mercury program is but another step in man's unrelenting urge to probe the mysteries of the earth, sea, air and space beyond.

Special footage taken through a periscope mounted in a Mercury capsule shows the curvature of the earth at a distance of 100 miles, land masses and oceans as they appear on maps, and the sun "reflected like a gold coin on the sea."

Actual footage taken inside the Mercury spacecraft shows Astronaut Glenn experiencing weightlessness, maintaining voice contact with Mercury Control at Cape Canaveral and tracking stations, and controlling the attitude of the spacecraft manually.

Dramatic sequences recreate Glenn's historic flight, his entry into the capsule, the countdown, launch and ascent, his recovery, and the lowering of the spacecraft on to the carrier deck where Glenn receives President Kennedy's telephoned congratulations. Brief scenes of Glenn's triumphal parade in Washington bring the film to a close.

Astronaut John Glenn is photographed in space by automatic sequence motion picture camera.

The grueling and exacting training program demonstrates how each Astronaut is prepared for almost any eventuality, including misfiring of the launch vehicle, erratic behavior of the spacecraft, and other unexpected conditions. The Astronauts' reactions are shown in centrifuge rides, mock-up models of spacecraft, orbital flight simulators and a particularly demonic device known as MASTIF, designed to throw the Astronaut violently into any attitude, conventional or otherwise, duplicating the worst possible conditions in a spacecraft.

The Mastery of Space concludes with a projection into the future and the projects that will take man to the moon.

Here Are Seminar Program Details for the "Ninth Day of Visuals" Coming June 4-5th

☆ Details of the two-day seminar programs planned for the "Ninth Day of Visuals", sponsored by the National Visual Presentation Association, have been released. Programs will be held at the Roosevelt Hotel, New York, on June 4th and 5th. Here are the events for Monday, June 4th:

9:30 A.M. "Progress in Visual Presentations." The latest developments in audio-visual equipment and techniques will be presented.

12:15 Noon (luncheon program): "How a Leading National Magazine Uses Visuals for Sales." W. J. Connelly, President, NVPA, presiding.

2:30 P.M. "The Target Shoots Back." Panel discussion with audience participation on what's right and what's wrong with the way audio-visuals are being used.

3:45 P.M. "1,001 New Ideas." Live demonstrations of the various techniques of audio-visual presentation (charts, slides, filmstrips, opaque and overhead projectors, motion pictures, etc.).

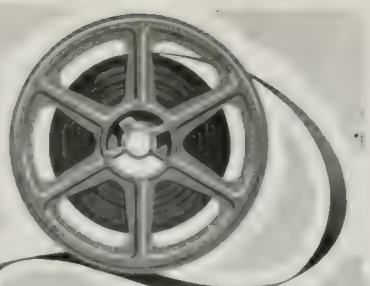
Events for Tuesday, June 5th are as follows:

9:30 A.M. "The Future of Visual Presentations." A panel of educators will discuss progress and techniques in training the audio-visual specialist of tomorrow.

11:00 A.M. "Tomorrow's Visuals . . . Today." A showing of and discussion on 1961's best visual presentations from a-v schools.

12:00 Noon (luncheon): Sales Executives' Club of New York "Day of Visuals" annual luncheon.

2:30 P.M. "Visual Presentations Around the World." Authorities from lands overseas discuss visual presentation developments in their respective countries.



3:45 P.M. "Looking at Overseas Visual Presentations." Demonstration and viewing of overseas visual presentations.

small WORLD

FROM ROBINSON P. RIGG'S VIEWPOINT

BOTH THE UNITED STATES and Britain are faced with the question of entering an economic and quasi-political alliance with the European Common Market. If we go in, both our nations will have to sacrifice some of our economic protection; if we stay out, we will be kept out of Europe's lush pastures by a solid wall of tariffs. Whichever way it goes we will all have to be better businessmen and more effective producers — that is the challenge to be faced by the young people of today.

A convention is being held in the Atlanta hotel where this column is written — not an unusual event in springtime U.S.A. But the convention is different, for the delegates are the businessmen and women of the future rather than the present who are attending the Southeastern Junior Achievers' Management Conference and for two days will discuss such affairs as "Taxes & Insurance", "Salesmanship", "Stocks & Bonds", and "Free Enterprise and Communism". And, from what some of the achievers have told me, there are many similar conferences taking place in the United States this year.

Youth Needs Answers to Its Problems

If the Southeastern Junior Achievers are anything to go by we need not worry about the eagerness of youth to tackle the problems ahead, but it would be advisable to consider how we can help them. One way is to provide motion pictures which will speed up their understanding of the problems and prepare for their solution in the future.

It is really a matter of public relations and planning which each commercial and industrial organization can tackle. Every year new staff is taken on from College and High School but very few sponsored films are really addressed to the boys and girls who have the potential to become the leaders and opinion moulders of the future, the people whose opinion of companies and products will influence others.

How Costain's Uses "Management Bait"

Some years ago Costain's, a British construction firm, sponsored a film costing the equivalent of $60,000 as "Management Bait" to encourage job applications from boys with the qualities needed for the planning and control of international building operations. The firm needed an annual intake of eight boys who would be put through college and trained for the higher management posts of the future, and they could not afford to make mistakes in their selection. The film, called *A World to Beat* is still being shown personally by the company's recruiting officer to nearly 100,000 senior high school students, every year.

That is one example, but there are many others. Business and industry sponsor films for classroom use to help the teacher. Some of the films refer to the sponsor's commercial interest and are rejected by the teacher as being difficult to include in the curriculum o cause they are said to contain too stro sales message.

Time to Put Our Basic Needs First

In addition U.S. Business spends millio dollars each year on public service telev programs for adults — money well if the programmes are widely seen and the right effect on their viewers. But are also many areas of public concern need to be covered by motion pictures dir

Introducing a New Columnist . . .

This new column feature is an "exclu sive" from Robinson P. Rigg, a leadin British advertising and business film con sultant and Industrial Films Correspon dent of the FINANCIAL TIMES of London Mr. Rigg is currently visiting the U. S as a guest of the State Department. H will cover international film develop ments and news of the Common Marke countries on his return to England late in the month. —OHC

exclusively at the different school gr especially at those students who are like get the most out of them through subse discussion and private study. Such film welcomed by teachers in the classr and impress P.T.A.s and community lea

Starting at first principles — films badly needed to teach discussion methods leadership techniques at school level. The needed to cover the subject in general but also to prepare for discussion techn in areas of special knowledge — in educa management, salesmanship, or even on h get on with your boss!

All of us learn these things in time through experience, but the youngsters t day have so much information to absorb they need some help in mastering the niques of using and communicating their k ledge effectively at a very early stage in working life. There are a number of this of motion picture available already, but too many have been sponsored by indu However some years ago General El sponsored *All I Need is a Conference* has become a classic in many cou throughout the world and I am sure the sor has gained much in prestige for h made the film possible. Henry Strauss & pany in New York produced *More than W* and *Feedback* which have provided stude communication methods with excellent la ing pads for further studies.

But all these films are designed for

PUBLIC RELATIONS · EDUCATIONAL · TECHNICAL · TRAINING · FARM . . . and

Medical motion pictures have grown-up. The layman sees only a very few of the many screened for physicians, surgeons and hospital staffs. All of them, nowadays, are designed to bring new and vital information to the greatest number of professional people in the shortest possible time. Medical motion pictures are helping to save lives. But remember: Doctors are the toughest audience a motion picture can face. Some of us are bug-hunters. Doctors are lint pickers, bless them.

PETER RIGG'S COMMENTA

(CONTINUED FROM PRECEDING PAGE TWE

and they deal with adult situations with v even today's sophisticated youngsters are familiar.

In every State of the Union, in univers industrial organizations, schools and film duction companies men and women are s ing ways in which information can bett presented by audio-visual means.

Two Few Businessmen at the DAVI

Recently I attended a convention of sp lists at the 1962 Department of Audio-V Instruction (DAVI) annual event in K City and I doubt if anywhere else in the would you find such a concentration of e knowledge and opinion on this very subject.

Yet I saw very few industrial exec there. There were hardly any, but I am that the representatives of the Shell Oil pany and Nationwide Insurance who di tend will take back to their companie formation which will be invaluable in planning of motion pictures, filmstrips, grammed learning and other materials could influence the businessmen and strialists of the future, and they will have cussed the problem with the nation's speci at University and school level.

Lockheed Was There — on the Screen!

Did anyone sponsor a film to show a Southeastern Junior Achievers' Manage Conference in Atlanta? Yes — the Loc Aircraft Corporation took them all on a of the plant through film — not a very borate production but one which will le lasting impression in the minds of ever of those potential leaders — even those do not join Lockheed!

THE EDITORIAL VIEWPOINT:

(CONTINUED FROM PRECEDING PAGE ELEVEN)

hundreds of thousands of Americans in '62 as foreign travel in this country alone shows another increase.

Reduced airline fares are spurring travel abroad; last year 1.6 million Americans visited foreign lands and early estimates indicate that it will be up at least 5% in the months ahead. 1960 was the big year and travel agents are hoping that '62's good beginning indicates a banner year.

Spending by U. S. visitors (2.6 billion in 1961) is about double that of visitors to America. While this contributes to the nation's balance of payments deficit, the residual goodwill and aid to overseas economies helps even the score somewhat.

Show Pictures of the U.S. Overseas

The great need, obviously, is to spur visitor travel *to the U. S.* and this job is now being undertaken by the special U. S. travel promotion in the hands of several agencies. Certainly an important factor influencing U. S. travelers are the hundreds of excellent foreign travel films, such as those provided by Pan-American World Airways, and the same medium should be given every opportunity via theater screens throughout the rest of the world. The lack of uniform standards for group audience service in which the U. S. is so well organized for 16mm film projection is compensated by the availability of theater screens throughout Europe, South America and the Middle East.

Underlying all of this *natural* interest is the *quality* of these travelers. Many who come to the U. S. from Europe are influential citizens in their own lands; obviously a lot of U. S. travelers are from the schools, business concerns, etc. and carry a good deal of influence in their communities. But the factor of greatest weight in the "travel picture" is the better understanding that also can come to the serious traveler.

A Program Opportunity for Television

It's becoming a smaller world each day. One wonders why the television program people, so convinced about the viewer popularity of "escape" shows, don't do something to satisfy the greatest "escape" force in the world today . . . the desire of almost every kind of viewer for a truly entertaining "inside" look at peoples, customs, "stars" and scenes from lands abroad. All of us, at heart, are "armchair travelers" if we can't do anything at the moment about going abroad.

Why not bring the literally unknown (in the U. S. at least) entertainment stars of Spain, Sweden, France, Pakistan or the Soviet Union with all the spine-tingling background of their own countries as the setting for what could really become one of *greatest* shows on U. S. television?

MULLING OVER A NEW MOTION PICTURE?
With 48 years of budget-stretching film experience we'll gladly mull with you . . . and then . . . produce!

AN AWARDS PROGRAM WORTHY OF THE BEST FROM U. S.

Council of European Industrial Federations Invites U.S. to Compete at Third Festival

SPONSORS AS WELL AS producers of informational motion pictures frequently ask, "what are the comparative merits of overseas film festivals?"

Through direct reports from observers who have visited the cultural events at Edinburgh and Venice they underscore the fact that both of these festivals are extremely broad in concept — that the traditional entertainment film gets *maximum attention* and that competition in this area between participating countries is especially intense, as it is at Cannes, France.

Emphasis Is On Entertainment

The 16mm motion picture, entering these competitions, is an "added attraction." Facilities for screening at Edinburgh, for example, are restricted to comparatively small audiences while larger cinema theaters present major theatrical attractions as part of Edinburgh's broad-range cultural program.

But one annual event has now become Europe's principal show place at which the Continent's best in industrial films come into direct and specializing competition. In 1962, the Third International Film Festival, sponsored by the Council of European Industrial Federations (CEIF) will take place on September 23-27th in West Berlin.

First Held in Rouen, Turin

The first event of this kind, held in Rouen, France, in 1960 was followed by the Second Festival in Turin, Italy last year.

In 1961, the CEIF, a counterpart of the National Association of Manufacturers called upon the NAM to handle participating entries from the United States and a committee of leading U. S. industrial film executives, largely from within U. S. industry, assisted Janet R. Wilkins, in charge of Audio-Visual Programs within the Manufacturers' Association in making the U. S. selections.

These films scored well, four U. S. entries drawing top honors at Turin, including the Grand Prix of the Festival.

German Industry Is the Host

The 1962 program at West Berlin is being arranged by the Federation of German Industries and the Confederation of German Employers' Association as host groups. Once again, Miss Wilkins is clearing U. S. entries through a selection committee of industrial audio-visual experts. Here are the details for prospective entrants;

Submit Entries by June 1st

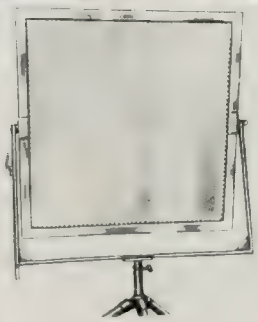
1. Films must have been completed since September 22, 1960. Sponsors or producers must forward their prints for screening committee review not later than June 1, together with a letter describing the film. Letters should also indicate the entrant's acceptance of the Festival's registration fee of 200 Marks (approximately $50) in the event of its selection as a U. S. entrant. *No charge is made unless the film is one of the finalists selected to go abroad.*

2. Participating countries may not enter more than 15 industrial films each. Films purely for entertainment or advertising are excluded from the competition. No more than four pictures may be entered in any one of the following Festival categories:

(a) General Public subject industrial, economic or social terest; or on specific indu products, materials or projec enhance prestige.

(b) "Specialist" Audience jects, i.e. films on administri and technical methods for inc ing productivity, efficiency output; automation; or the cation of modern industrial te ques. Specialist films on mate ing and sales techniques or mercial practices are in this gory.

(c) "Specialist" Audience cluding Schools: films on sc fic principles and research their application in industry.



(d) Industrial Audience jects, dealing with the humar tor in industry, i.e. trainin management and work force. vention of industrial accident disease; health and welfare o ployees, etc.

Where to Write for Deta

Entries for the Berlin Fe and all relevant correspon should be addressed to Jan Wilkins, Producer, Audio-V Programs, National Associati Manufacturers, 2 East 48th S New York 17, N. Y.

New Light from F & B

Presenting Ralph Hoge's New

FIREBALL Reflector

A revolutionary new approach to outdoor reflector lighting technique.

FIVE BRAND NEW PRINCIPLES ARE SET TO WORK

Five brand new principles have advanced the art of using reflectors from an unwieldy, difficult process to an exact science with all the control and plasticity of using incandescent lighting equipment.

The FIREBALL is fabricated of two pressed aluminum sheets bonded to plastic materials and joined together at all four sides. The texture of the aluminum is formed by pressing with lenticular dies which form a myriad of tiny prisms. This magnifies to the ultimate the light-gathering power of the reflector. The envelope formed by the two joined reflectors is suspended from the frame and an air valve is tapped into one side. By pumping air into the envelope, the reflectors will "belly out", resulting in diffusion and spreading of the reflected light beam. As a result, the beam can be "focused" and controlled by the volume of air, just like a spotlight.

The reflector surface is practically indestructible—it can be washed, polished, cleaned.

The reflector is the standard 4' x 4' size, which mounts in all standard yokes and weighs only 6 pounds.

150 TV Commercials Bid for Festival Honors

Coast-to-Coast Tour of Winners to Follow N.Y. Festival

Prominent advertising executives on five regional councils of judges for the 1962 American TV Commercials Festival have voted on 150 top finalists in separate meetings conducted last month by Festival Director Wallace A. Ross.

Finalists in 35 categories were selected from 1254 film and videotape entries after three weeks of preliminary judging in New York.

Regional Judging of Finalists

Finalist judging in the various regions took place in Chicago, March 26, in the studios of WBBM-TV; in Dallas on March 28 at WFAA-TV; Los Angeles, March 30 at KTTV; and Canadian judging in Toronto earlier in the month. Final results are a cumulative average of all regions.

Of the 192 companies who entered commercials, 112 were advertising agencies, 60 were production companies, 15 were stations or networks and five were sponsors. The regional breakdown shows that 86 entering companies are based in New York; 25 on the West Coast; 14 in Canada; 9 in the Southwest; 22 in the Midwest; and 36 in other parts of the country.

Ceremonies in May and June

Awards luncheons and exhibitions will be held at the Waldorf Astoria Hotel, New York, May 4; the Sheraton-Chicago Hotel, May 11; the Park Plaza Hotel, Toronto, May 16; the Sheraton-Dallas Hotel, June 7; and the Beverly Hilton, Los Angeles, June 13.

Best Awards in the competition will be given in each of a probable 35 product categories, plus Special Citations for Craftsmanship in perhaps 10 categories, and Special Citations for best commercials from special regions — Southwest, Midwest, West Coast, Canadian, etc.

ED. NOTE: Winners of the Festival will be reviewed here next month.

Ad Agency & TV Station Guide Aids Efficient Film Handling

"A Guide for Advertising Agencies and Television Stations in Handling Materials for Spot Television Commercials" is the title of a folder released recently by the Station Representatives Association as a joint recommendation of SRA and the American Association of Advertising Agencies.

The purpose of the "Guide" is to promote greater efficiency in the handling of film, video tape and other materials sent by agencies to stations for use in TV commercials. The five-page folder is organized in two sections — a guide for agencies on specifications of materials, how many copies to ship, and when and how to ship them — and a guide for stations on handling materials and instructions before and after telecast.

Copies of this informative booklet may be had from either the Station Representatives Association, 366 Madison Avenue, New York, or the American Associations of Advertising Agencies, 420 Lexington Avenue, New York 17.

Careers in Fashion Industry Outlined in New Color Film

A career guidance film about the fashion industry has been made available on a national free-loan basis through Sterling Movies U.S.A. to student audiences by the Fashion Institute of Technology, New York.

Fashion Is Everybody's Business describes the many rewarding careers open in the multi-million dollar a year business world through the Institute's two-year course of study. The film explains the varied curricula of the college which leads to certificates in merchandising, design, communications and management. It also points up the opportunities which are continuing to develop within international fields.

Festival Director Wallace Ross and judges view TV finalists in Manhattan.

Here's the "Thunderbird Jet" team pictured in a scene from "Breaking the Language Barrier" (see below).

WASHINGTON FILM COMMENTARY

by Mary Finch Tanham

Washington Correspondent for Business Screen

ONE OF THE BEST people-to-people films to hit Washington in many years has been produced by the U. S. Air Force and was a finalist nominee in Hollywood's recent Academy Awards as a "Best Short Subject."

The picture, *Breaking the Language Barrier*, has as it thesis "sky language" is universal and can bridge the gap between men and nations. Combining some animation and plenty of live action, the film documents a brief encounter between a holiday-spirited crowd at a Japanese airfield and the famed aerial acrobatic "Thunderbird Jet" team from the United States.

In breath-taking color sequences, the gyrations of the Thunderbirds are filmed from every angle, watching the performance through foreign eyes.

Produced by the Air Photographic & Charting Service group based at Lookout Mountain in Southern California, the film is nearly devoid of an Air Force "pitch," even though there are planes in almost every scene and a long sequence featuring the young pilots of the TBirds. Rather, there is a glorious sense of pleasure that someone back in Washington thought up the idea of taking the air show to Japan.

This film was lensed with simplicity and purpose. It provides its American viewers with rather unexpected insight. Hopefully, it may also affect those in the Orient the same way, for this film really carries a message from one people to another.

* * *

Film to Show "U.S. at Best" in Southeast Asia Campaigns

. . . Audio-visuals are definitely in the picture in a Defense Department memorandum to US Army soldiers in the guerilla-infested areas of Southeast Asia. In advisory instructions issued by the Office of the Assistant to the Secretary of Defense (Special Operations), aggressive "military civic action" is advocated as an important part of our fight against the Reds. One recommendation is that generators and projectors be utilized in the host countries so that local and American films can be seen by villagers.

Using those films with a "simple, direct theme showing us at our best" is considered good counter-guerilla planning. Hundreds of films produced by our non-theatrical industry should fit into this category—after all, what better friendship can we offer than to make available materials which teach *and* entertain at the same time?

Members of the TBird group meet Japanese fans at field after show.

* * *

Activate Civil Defense Films Through Distribution by Army

. . . Many in Washington have pondered the fact that there are disturbingly few educational and informational government films about civil defense. How, they say, can the public make up its mind about fallout shelters, blast shelters, stockpiling, etc., unless the *facts* are shown on TV, in movie chains, and at club meetings? Certainly the past educational program has not utilized films to their best advantage.

It has recently been announced, however, that the Department of Defense has assumed the responsibility for civil defense and will distribute through the Army Film Distribution and Utilization System all available Office of Civil Defense motion pictures. These films will be stored, booked, loaned, and shipped according to the same procedures established for other Department of Defense films. The same system will also be employed for motion pictures of the Office of Emergency Planning.

It can be hoped that, by lumping together all present DOD films relating to civil defense, and by adding other up-to-date educational pictures, and by distributing these through the Army's wide, streamlined service, the public will be able to form a better image of our civil defense capability today.

Government, Trade Group See Latest in A-V Equipme

. . . Representatives from go ment agencies, professional s ties and industry will be inter in the announcement that th nual Audio-Visual and Pic Equipment Show has been s uled for the Sheraton Park in Washington D.C. on Nove 6, 7, and 8, 1962.

Always well-attended, this is considered by commercia hibitors as the ideal place to sent the latest equipment to ernment contractors and educ in the capital city area. Be space has been limited in the additional facilities have made available in the Exhibit of the Sheraton Park.

The affair is being pres under the auspices of Trade ciates, Inc., 2818 Penna. N.W. Washington 7, D.C. a cooperation with the Washi Section of the Society of M Picture and Television Engi The exhibit will be open to the equipment field and q are invited.

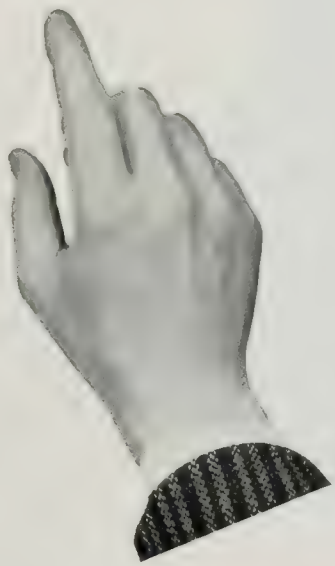
Ten Films in Preparation at Scripts by Oeveste Granducci

. . . Scripts by Oeveste Granducci, Inc., Washington's oldest script-writing firm, is scripting ten new films this month on subjects which range from blue laws to submarine rockets. They include: *One-Day Criminal* for the Seventh Day Adventists, and *Subroc* for the Naval Ordnance Laboratory.

Granducci's staff is also writing a public relations film for the Medical College of Virginia titled *Second Blessing* (which is health). *Just To Be Needed*, which will be produced by National Film Studios, Inc. of Washington D.C., is about military nursing and is sponsored by DACOWITS. *Block That Kick—In the Teeth!* is the intriguing title of a Public Health Service film, and *Sum of the Parts* will be for Westinghouse Electric Corporation. General Motors Institute is going to film *Express To Destiny*, and the Farm Credit System will produce *Credit Where Credit Is Due.*



Through the Robert E. Wilson advertising agency in New York, Granducci will also write an informal film for one of the leading pharmaceutical houses on one of the current, gossipped-about, front page drugs . . .

* * *

Bonanza Air Lines to Bid for Western Travel With New Film

. . . Like to go to the mountains for a vacation? Like to go to the sea? Soon, after viewing a new 28 minute film, you'll probably stand up in the family fight and hold out for *Bonanzaland*—a glorious Utopia which includes California, Nevada, Utah and Arizona. Bonanza Air Lines in Las Vegas, Nevada is going to produce the 28 minute color film of the exciting, beautiful West — with a special challenge to other airlines for direct tie-in service.

In other words, they want to make it possible for you to stand at an airline ticket counter on a muggy day in Washington, plunk down a bit extra on your fare ticket, and take home an open ticket which will let you — at the drop of a wet bathing suit — fly over and explore the four big western states. Washington Video will produce the film and it is being written by Coe-Peacock, inc. of Washington. (*Cont'd.*)

Patterns for Science Teaching Reported in "A Probing Mind"

. . . *A Probing Mind* is the title of a new film report on current patterns of teaching High School Science. Through actual classroom scenes, the film delves into the aims of science teaching in modern schools. More specifically, a space age educational environment — which includes films, tv., recordings, teaching machines and well-equipped laboratories — is depicted.

The film was produced by the National Educational Television and Radio Center pursuant to a contract with the US Office of Education under Title VII of the National Defense Education Act. It is available for loan from most State Departments of Public Instruction and may be rented from many film libraries. It is cleared for TV and has been shot in 16mm black and white.

RADIANT'S chemical development laboratory

ANOTHER REASON WHY THE WORLD'S BEST PROJECTION SCREENS ARE MADE BY RADIANT

One of the many reasons why Radiant continues to lead in the manufacture of Projection Screens can be seen here in this completely equipped chemical development laboratory.

Here are just a few of the investigations and experiments that are being carried on by Radiant's research team of engineers and technicians.

—Tests for the development of new lenticular and beaded screen surfaces. Pictured here is a goniophotometer being used to check the reflective quality of a run of silver lenticular fabric.

—Formulations of coating compositions for screen surfaces which will improve reflectivity, light stability and mildew and flame resistance.

—New techniques for producing beaded surfaces by spray coating.

—Quality control testing of incoming raw materials to assure that they meet high manufacturing quality standards.

—Environmental testing to determine dimensional stability of fabric under fatigue and a range of conditions.

Research and development facilities like this chemical laboratory are the reason why Radiant Projection Screens are recognized and preferred by consumers and dealers alike for their quality.

This is Screenland U.S.A. . . . Radiant's new manufacturing plant. We would be pleased to have you visit it — to see for yourself how and why the best Projection Screens in the world are made.

KALART VICTOR

SERIES SEVENTY 16mm SOUND PROJECTORS

There's a lot to like about the way a Kalart Victor shows your 16mm sound films. Picture quality is brilliant. Sound is superb. Special features provide for simplicity of operation and protection to valuable films. But of all the reasons for choosing a Kalart Victor, the projector's dependability comes first with most people.

What is there about a Kalart Victor that makes it so dependable? For one thing, its basic design ensures trouble-free performance with such features as large single drive sprocket, stationary sound drum and self-aligning pull-downs. There's nothing temperamental about a Kalart Victor. Another reason is the high standards each projector must meet. For example, no Kalart Victor ever leaves the factory unless it has passed a rigid inspection after 6 hours of continual operation.

Decide now to see your Authorized Victor Audio-Visual Dealer for complete information about the one 16mm sound projector you can really depend on.

Free booklet—"How Industry Profits from Films." Covers use of audio-visuals in every phase of business. Send now for your copy. Address your request to Victor Animatograph Corp., Dept. 10V

What's Ahead on the Meeting Calend

July 11-24 New Dates of the 5th Vancouver Film Festival

July 11th through 24th are the new dates for the Fifth Vancouver International Film Festival, confirmed this month by Film Committee Chairman Eric Gee.

The new schedule provides two weekends to accommodate more out-of-town patrons and provides additional opportunities for seminars, discussion groups and meetings.

Formal approval from the International Federation of Film Producers' Associations in Switzerland has been received and invitations to participate have been sent to embassies, film societies and film producers throughout the world.

Audio-Visuals in Space Age to Be NAVA Convention Theme

☆ *Audio-Visuals in the Space Age* has been chosen as the theme of the 22nd Annual National Audio-Visual Convention and Exhibit, July 21-25, 1962, at the Morrison Hotel in Chicago. According to Hal Fischer, convention general chairman, the theme is intended to suggest the parallel importance of the increasing role of communications in the progress of mankind and the increasing role of audio-visuals in the progress of communications.

It is predicted that the convention will attract a record attendance in '62. A major feature will be the National Audio-Visual Exhibit which is expected this year to include 250 booths. Firms interested in exhibiting may request data from James Hulfish, Exhibit Manager, NAVA, 1201 Spring Street, Fairfax, Virginia.

ARTHENON PICTURES
HOLLYWOOD

excerpt from Parthenon's first ient Proposal. It still seems to pply . . .

WHY SHOULD YOU HAVE A MOVIE?

obably you should *not* have a ovie." But your company might fit substantially by having a l, designed to do a specific job informing, persuading, or in-ring — a tool which for certain ng reasons is packaged on long row strips of cellulose acetate.

is is not meant to be whimsical; difference between a "movie" l a "Film Tool" is 180°. A ovie" is made to entertain — a m Tool is designed to inform l persuade. A "movie" is ad-ssed to an audience — a Film ol is designed for work with *in-iduals* and small, common-inter- groups. A "movie" often must y down to a mass audience, and st excite their interest in its ject by entertainment tricks and ices — the Film Tool addresses elected target group, assumes existing interest in its subject ich does not need artificial ex-ng, and assumes a determinable el of intelligence, alertness, and -information in its viewers.

y package this Tool on film? st, because film-in-motion is the y medium which guarantees attention to the entire message; printed advertisement, no TV w, no brochure, not even the st hypnotic salesman can per-de a prospective customer or iever to sit in a quiet room for or 30 minutes and concentrate on film message.

nce, film can get over our *whole* y — and get it over in the t logical progression of the mes-e-points, without the prospect ing a chance to interrupt or, se, to skip ahead.

n is free of the need to waste le on attention-getting "stoppers," ause the viewer is already seated attentive. Film "carries its ger in its tail," i.e., in its resi-l impression, and hence can im-t necessary, but perhaps dull, ndational material up front with effectiveness impossible in any er medium.

— and perhaps most impor-tly — film implants its impres-in the form of *picture-images.* l since people tend to remem-what they see rather than at they hear, the impressions le by film have a better chance ndure.

KALART VICTOR
MOVIEMATIC REPEATER PROJECTORS

PLUG IT IN AND IT'S READY TO SHOW

That's all there is to showing your 16mm sound films with a Moviematic Repeater Projector by Kalart/Victor.

No reels of film to thread. No separate screen to set up. No need to darken the room. This adds up to a new dimension of convenience in showing sound films when you use a Moviematic.

Moviematic Repeaters project your film from a power-driven magazine which eliminates threading and rewinding. Show the film once, and it's automatically rewound and ready for a repeat performance immediately.

Moviematics with built-in screen and repeater magazine are designed to help you tell your story anywhere —from the top of a prospect's desk to a counter at point of purchase. A wide range of models satisfies every requirement.

Projectors are available 3 ways: (1) for purchase, (2) for lease, and (3) for lease to purchase. Your needs can easily be met whether you need a single projector or a fleet. For complete information, including the name of your nearest dealer, write to Victor Animatograph Corp., Dept. 10T

19th Annual Safety Film Awards

National Committee on Films for Safety Awards Honor Plaques to Eleven Pictures Award of Merit Citations to Twelve Films for Contributions to Safety Education

ELEVEN MOTION PICTURES have been honored by the National Committee on Films for Safety as the nation's best in their spective fields of Occupational Safety, Traf- & Transportation, General and Home Safety r 1961. Their sponsors will receive Bronze aques, emblematic of the Committee's highest ward, during ceremonies at the National fety Congress in Chicago next fall.

Eleven other motion pictures and one sound idefilm were also honored as the Committee warded Merit Certificates in recognition of eir contributions toward vital tasks of safety ducation.

Nation's Leading Safety Film Program

Undoubtedly this country's most authorita- ve single awards program, these selections ere made by the heads of 23 national or- nizations identified with safety education, in- uding the National Safety Council, the Amer- an Automobile Association, National High- ay Users' Conference and similar groups. ntries in the 19th Annual Contest were reened by experts in the fields represented ithin the Safety Council and then final selec- ons were made by members of the Committee a whole.

William Englander of Chicago is Secretary the National Committee.

Three Plaques for Occupational Safety

Three motion pictures will receive plaques the Occupational Safety category. *Locked n*, produced by Parthenon Pictures for Gen- al Dynamics/Astronautics, reveals the ex- ting performance necessary to avoid mishaps hen launching missiles. *Firefighting Aboard ankers,* showing how fires are extinguished oard ships, was produced and sponsored the U. S. Coast Guard.

A series of four films dealing with problems supervisory personnel in industry and show- g how management can cope with potential mployee accidents was the other winner in e Occupational category. Titled, *The Key an,* this series was sponsored by the National fety Council and produced by Gilbert Alt- hul Productions.

Honored for Traffic Safety Pictures

In the Traffic and Transportation category ere were three plaque top winners. *Anatomy an Accident,* produced by Jerry Fairbanks oductions for American Telephone & Tele- aph Co., dramatizes how tragedy can result safe driving practices required on the job e ignored in the family auto away from ork.

Another Plaque winner in this category, *The ottle and the Throttle,* tells how a teenager arned the hard way that alcohol and gasoline n't mix. Sponsored and produced by Sid Davis Productions, Hollywood, this film also describes the effects of alcohol on the body.

None for the Road, produced and sponsored by Charles Cahill & Associates, shows the results of a "social drinker" taking the wheel after a cocktail party.

The Home Safety Category produced two outstanding Bronze Plaque winners:

Just Plug It In, produced by Bay State Film Productions for a group of electric utility companies, illustrates safe practices in using electrical home appliances and equipment.

See A Pin, produced by Audio Productions for the National Board of Fire Underwriters, has a mythical character prevent fires in a typical home until a situation develops with which even he cannot cope.

A case history of how a local program for safe tractor operation was stimulated, was one of three Plaque winners in the General Safety category. Titled *Farm Tractor Safety,* it was produced by John Colburn Associates for the American Petroleum Institute.

Ten Long Minutes, produced by Pilot Productions for the National Safety Council, shows many off-the-job accident factors that may be encountered by the average family. The final film selected for a Plaque Award in the General Safety category demonstrates the various forms of water rescue techniques and artificial respiration. Titled, *Water Rescue,* it was produced by American Film Producers for Health Research, Inc.

Winners of Award of Merit Citations

Award of Merit citations were presented to two motion pictures and a sound slidefilm in the Occupational Safety category. *Design for Safety,* produced by Aerojet-General Corp., Liquid Rocket Plant, points out the importance of special safety programs in rocket plants; *Safety in the Chemical Laboratory,* explaining safe practices necessary when using chemicals in laboratories, was produced by Edward Feil Productions for the Manufacturing Chemists' Assn.; *Warn-Guide-Protect,* an instructional sound slidefilm, was the only sound slidefilm to receive an award. Produced by Chicago Kennedy Productions for American Gas Association's Accident Prevention Committee, it stresses three phrases of safety in public utility work on traffic thoroughfares.

There were five runner-up winners in the Transportation and Traffic category. *Broken Glass,* sponsored by the University of California at Los Angeles and produced by Charles Cahill & Associates, shows staged accidents which dramatically illustrate the forces involved in car collisions; U. S. Public Health Service's Division of Accident Prevention sponsored *Look Alive,* produced by WCD, Inc., taking the pedestrian's viewpoint in uncovering unsafe walking practices; *The Other Guy,* revealing the shared responsibility of three drivers involved in an accident, was produced by Sidney J. Stiber Productions for Tyrex Inc.; *The Sixth Wheel,* produced and sponsored by Sam Orleans Film Productions, tells the story of a day in the lives of three typical drivers; *Trailer Safety,* by Charles Cahill & Associates demonstrates several car-trailer situations which drivers must encounter.

Merit Awards for General, Home Safety

Two films received runner-up certificates in the Home Safety category. Aetna Casualty & Surety Company's *Fireman at Your Door,* describes a home fire inspection program which was conducted on a community-wide basis; *When Sally Fell* produced by VPI Productions for U. S. Public Health Services, shows several hazardous home situations which are responsible for serious accidents.

Award of Merit winners in the General Safety category were: *Water Safety — Guam,* a Strategic Air Command film produced by the USAF, 1352nd Photo Squadron, and *You Are the Lifeguard* produced and sponsored by Aetna Casualty & Surety Co., showing ways that parents can assist in promoting safety in swimming areas.

Blue Ribbons to 67 at New York

Jurors Screen 379 Motion Picture and Filmstrip Finalists to Select Best 67 in 36 Widely-Ranging Categories at the Fourth American Film Festival

A DIRECT REPORT BY OUR NEW YORK BUREAU

THE EDUCATIONAL FILM Library Association attracted over a thousand film and filmstrip enthusiasts to its Fourth Annual American Film Festival held at the Biltmore Hotel, New York, April 25-28. Out of some 700 entries, festival jurors faced a staggering total of 309 motion picture "finalists" and 70 filmstrips and sound slidefilms from which they selected some 67 winners of Blue Ribbon awards during the four days of final judgment.

Emphasis was clearly on the *educational* aspects of filmed media, with 19 of the Festival's 36 varied categories devoted to films and filmstrips for classroom teaching, educational and child development, geography, history, home economics, language teaching, classroom sciences, sociology, physical education, etc. A category of "Film as Art" and another of "Films for Children" was followed by three groups of films for church use, i.e. "The Church at Work," "Doctrinal and Denominational Presentations," and "Ethical Problems."

Eight Categories Are Business-Oriented

Eight of the Festival's 36 categories were business-oriented, with films for "Industrial and Technical Training," "Public Relations" (three categories), gaining juror attention along with categories for "Sales Promotion," "Sales and Technical Training-Business Education," and "Travel" motion pictures and sound slidefilms. A final group of four categories covered such areas as "Health, Medical Sciences" (for Professional Audiences), "Mental Health" and "Safety & First Aid."

Out of this widely-diversified subject background, industrial companies drew only 11 Blue Ribbon Awards this year, two of these going to American Cyanamid Company (motion picture and sound slidefilm); two to General Electric (also for a motion picture and a sound slidefilm). Other business-sponsored Blue Ribbon winners were Ex-Cell-O Corp., Ethicon, Inc., The Metropolitan Life Insurance Company, International Paper Company, International Business Machines (Electronic Data Processing-sound slidefilm); the Shell Oil Company, and Smith, Kline & French Laboratories.

Blue Ribbons to Organizations, Govt.

Organization winners of Blue Ribbons included the Iowa Beef Producers Association, the Ontario (Canada) Department of Fisheries, Amalgamated Lithographers of America (Local 1, New York), the Jamaica Tourist Board, and the National Board of Fire Underwriters.

Federal and State government agencies sharing top awards included the Federal Aviation Agency, the U.S. Geological Survey, the North Dakota Wheat Commission, New York City's Department of Sanitation, the Port of New York Authority, and the National Film Board of Canada. The Film Board, always strongly represented at this event, was a three-time Blue Ribbon winner in 1962.

Elektra Film Studios a Double Winner

Elektra Film Studios, New York, was also a multiple Blue Ribbon Award winner with top honors in "Industrial and Technical Processes" for *Litho*, produced for the Amalgamated Lithographers of America, and for *Prof in the Bag*, the winner of the "Personnel Tra ing and Relations" category. *Profits* was pr duced for the International Paper Compar Dynamic Films won a Blue Ribbon for *Ha Litter, Will Travel* produced for the N. Y. D partment of Sanitation; MPO Productions' *T Science of Fire* was the Blue Ribbon winner "Safety and First Aid," and Vision Associa shared Blue Ribbon honors in the "Public R lations—Non-Profit Organizations" catego for adult and community use with Wilding, I Vision's winner was *Flight*, produced for t Federal Aviation Agency. Wilding was acco ed the Blue Ribbon for *Hidden City*, produc for the Greater New York Fund campaign.

"Project Hope" Won Again in New York

The American Film Festival took a l from the recent Academy Awards of the ent tainment film industry when jurors gave t Ex-Cell-O Corporation's *Project Hope* t Blue Ribbon in the "Public Relations-Comm cial Organizations" category. Robert Klae assisted MacManus, John & Adams advertis agency in producing this documentary rec of the hospital ship's maiden voyage to Sou east Asia.

A strong *Inter*-American flavor was noted the Festival as several Canadian groups a producers garnered Blue Ribbons in addit to the National Film Board awards. Craw Films won a top prize for *Beaver Dam* in "Stories for Children" category; as did United Church of Canada for *Phil M. Strip*

Moody Science Films are Honored Twice

The Moody Institute of Science won t Blue Ribbons with *Debt to the Past* shar honors with NBC's "Project 20" film, *T Real West* in the "History" category. Ot non-profit organizations among the winn were the Perkins School for the Blind (*C dren of the Night*, produced by Campb Films); the Rockefeller Foundation (*Harv* produced by Willard Van Dyke); the Men Health Film Board (*The Mental Health Ye* produced by Affiliated Films); the Old D mouth Historical Society & Whaling Muse (*Whaler Out of New Bedford*, produced Francis Thompson); and the New Hampsh Childrens' Aid Society (*Debbie*, produced Victor Weingarten).

Religious award winners were the Unid Presbyterian Church (*Through These Hars* produced by Wilson Davis Productions); "Je Hour of St. Francis, of Los Angeles (*Je Third Devil*); and the American Friends Se ice Committee (*The Language of Faces*, tributed by Contemporary Films).

Educational Film Producers Are Cited

Educational film producers and distribut sharing Blue Ribbon honors included The ciety for Visual Education, Inc. (with two fi strip winners); Film Associates of Califo with Blue Ribbons for *What's Alive* and *Gallinita Roja;* Cenco Educational Films, a top award for *Nuclear Radiation: Fall* Ohio State University, a winner for *Foot As It Is Played Today*.

The Jam Handy Organization's School vice Department received a Blue Ribbon *The Soviet Union Today*, a filmstrip series

'acked Screening Rooms by Day; Discussion Nightly at the Festival

TWELVE SCREENING ROOMS were in continuous use during the four days f the American Film Festival as jurors ut in day-long sessions to cope with the 79 "finalists" from which the 67 Blue ibbon winners emerged at the annual wards banquet on the night of April 7th. Many of the rooms were continuusly packed to standing room capacity, testing the enthusiasm of both jurors nd guests.

Audience participation critiques, held the conclusion of each screening sesion, provided a useful pattern of what ie film user wants in today's images. A ough consensus seemed to be that both rors and audience members thought lms were more sophisticated this year — ming for more intelligent audiences — nd that this is all to the good.

Evening programs were devoted to anel discussions of "Filmstrips: New nd Different" and "It's Nice, But Is It ecessary." The latter involved a discusion of the effectiveness of production chniques, posing the question of whethr the film with unusual color, animation, ntasy, camera angles, etc., does a better b than a straightforward presentation.

Panel chairman for this topic was FLA President Elliott H. Kone, Yale niversity. Panelists included Frederic A. hite, University of Wisconsin; Carl enz, Modern Talking Picture Service; ee Bobker, Vision Associates; Robert ell, On Film; and Francis Thompson. he audience numbered over 500.

On the same evening, producer Thompn and the Reevesound Company demnstrated a multi-screen film produced for e Atomic Energy Commission and proted with equipment engineered by eevesound. The film has been showing four Latin-American capitals for the st two years; is projected simultaneous- on three 12 x 16-foot screens in theer areas accommodating 300 persons. It rves as an exciting introduction to the S. Atomic Energy Commission's *Atoms Work* exhibit.

Designed for lay audiences, the film exores the nucleus of the atom and exains, in broad terms, the many practical plications of atomic energy in power oduction, industrial processes and agculture, as well as in medical diagnosis d therapy.

While the three-screen system utilized the presentation is similar to both the nerama and Cinemiracle processes, oducer Thompson has used it with eater freedom than has been employed retofore. Dramatic panoramic images ay be projected across the 52-foot dth of the screens, or as separate reated and continuous images. —RS

Sponsor Views on Effective Business Films

Workshop Comments of Six Experienced Users of Filmed Media Provide a Useful Short Course for Companies Who Want "Maximum Results from Business Films"

FEATURED PRESENTATIONS at the day-long workshop on "How to Get Maximum Results from Your Business Films," jointly sponsored by the Film Producers Association of New York and the Association of National Advertisers this past January, were those given by six executives of leading U. S. companies.

Outlining the effective contributions of films within their firms were C. T. Smith, General Statistician, Marketing and Public Relations, American Telephone & Telegraph Co.; Kenneth P. Donellon, Public Relations Staff, Ford Motor Company; William Torpey, Advertising Manager, Remington-Rand International; Bruce E. Sturm, Director of Advertising & Promotion, Jantzen, Inc.; George Mosley, Vice-President in charge of advertising, Jos. E. Seagram & Sons; and Jack L. Siegel, Manager, Film & Television News Activities, International Business Machines.

Highlights of Mr. Smith's comments lead-off these abstracts of their talks, which were accompanied by showings of relevant company films, so noted within individual six presentations which follow.

* * *

by C. T. Smith

We (at AT&T) think that films will help people to know more about our business and to understand it better.

We believe that films will help in the effort to have the public think favorably of our business. Furthermore, we think that having the public favorably disposed toward our business will make them more willing to listen to a sales message and more likely to buy the many products we have to sell.

Why Test Films?

Each film represents a substantial outlay — with costs going up every year. Thus, the total film program over a 10-year period, say, represents a large cumulative investment. And film provides a medium which can do us a lot of good, but because it is so potent, it can also do us a lot of harm if not skillfully used.

What Users of Industrial Films Want to Know:

- Audience: How many and what kinds of people actually see the films?
- Interest: Do they find them dull, interesting, very interesting?
- Communication: Do people get and understand the specific messages that the picture is intended to convey?
- Attitude Effect: Is it likely that the film will influence attitudes favorably?
- Behavior: Do people do anything as a result of having seen the film?
- Having tested audiences of betwen 300 and 350 with the facilities of Schwerin Research Corp. (and other testing organizations), these conclusions are noteworthy:

A. Three important things were learned from a specifically-designed test:

1. Films can affect customer attitudes negatively as well as positively.

2. It is possible, using the results of such a study, to bring about improvements in the effectiveness of a specific film and to remove negative results if they are present.

3. That the method of testing did stand up when put to a rather severe test.

B. Elements frequently found in the most effective films:

1. Those in which the story is told in terms of people rather than "things" or machines.

2. Those which have an appeal to the emotions — not just to the intellect — and which do more than just convey information.

3. Those which have a familiar frame of reference with which the viewer can identify.

4. Those which are customer-oriented and which show how customers benefit by what the film depicts.

C. Things which seem to affect the interest levels of telephone company films:

1. Trick beginnings confuse the viewer and frequently result in loss of interest.

2. Failure of video and audio to complement each other usually results in a drop in interest.

3. Montage and trick shots rarely seem to do well.

4. "Voice-over" usually produces less interest than direct dialogue.

5. People seem more interested in other people than in machines.

6. "Commercials" or sales messages that make fairly direct statements of the points which the sponsor wishes to get across are usually accompanied by a drop in interest.

7. On the other hand, if too much is left up to the viewer, the idea doesn't get across at all, and there is *no* effect on attitudes. *Cont'd.*

C. T. Smith, General Statistician, Marketing and Public Relations, at American Telephone & Telegraph.

GETTING RESULTS FROM OUR BUSINESS FILMS:

(CONTINUED FROM THE PRECEDING PAGE)

D. There can be a direct conflict between interest and effectiveness.

I'm not saying that industrial films shouldn't be interesting or entertaining. If they aren't, no one would want to show them. On the other hand, they could be made so entertaining, that the sponsor's message just wouldn't get across at all. A film apparently has the least chance of being effective in influencing attitude if it has a relatively low or a very high interest score.

E. Pre-Testing the Picture

One of the most important developments is the use of storyboards — simple sketches and recorded sound tracks — to pretest ideas and continuity of films in the early stage. Pre-testing can help in the selection of subjects, in deciding on treatment and in discovering, early in the game, potential boomerangs. It does, however, take time and cost money.

F. The Philosophy of Testing

A concluding point: superficial, spasmodic testing can be misleading to the user of films and it can be unfair to the creative people who sweat blood to produce good pictures for our companies.

Kenneth P. Donellon, Public Relations Staff, Ford Motor Company.

Ford Dealers Respond to Sales Meeting Spectaculars

SINCE WORLD WAR II, our company has relied on sales meeting spectaculars to whip up enthusiasm among our sales (dealer) personnel. Many times before we had combined film with live stage presentations, but two years ago we decided that continuing the past procedure of traveling a stage show for more than a month to our 40,000 dealers to introduce our 1962 line of cars and trucks was not nearly as practical or economical as putting the whole show on film and releasing the finished prints at showings during a 6-7 day period.

MPO produced our film and it provided certain plus values in terms of being able to show movement and road scenes and the unique effects of which film is capable. Our film *Got It Made* took eight months to make, two months of which were spent in research by MPO's writers; three months more were spent in developing the script and three months were consumed for production.

The result, through film's techniques and ability to present lavish entertainment and demonstrate the real selling points, was a real selling message to a *very* particular audience.

William Torpey, Advertising Manager, Remington-Rand International.

Film Helped Us Meet Our Overseas Market Objectives

OUR PROBLEM WAS FIVE-FOLD:

1. *We had to introduce* a new portable typewriter to our entire field force and particularly to our salesmen in 125 countries in who knows how many languages.

2. *We had to instruct* them in the features of the product and its durability.

3. *Our main sales story* was a strong one, and we had to get this across as forcibly and memorably as possible. Quote, this typewriter has all the features of an office typewriter — but it's a portable, unquote.

4. *There had to be a change of pace* between the presentation for this portable and the film strips which had been prepared for two new office typewriters being introduced at about the same time.

5. And this is a tough one that many of you have had to grapple with yourselves — *we had to make the presentation usable in any market of the world.*

Solution Called for a Motion Picture

We discussed the whole problem in detail with our International Advertising Agency, Doyle Dane Bernbach, and our production company, Vision Associates of New York, and this is the solution they came up with:

1. *We would prepare a motion picture.* It would have a sound track for musical and sound effects, etc. — but there would be no voice. This avoided the problems of translations for different language markets.

2. *We would use a talented comedian* to show in pantomime the stripping-down of an office typewriter and the building up of the new portable, using many of the same parts. He would go on to show the operating features of the machine. When you see part of the f in a few minutes we will see how the "build-u was handled. (Showing of picture followe

Found Many Ways to Use the Picture

3. In addition, *the film could be used local offices* to train their salesmen, it could used by salesmen to sell dealers, it could used to show the bigger customers the machine, and it could be used in closed-l projectors for window displays, trade fairs,

And what were the results?

After our initial presentation of the m to the managers of all of our European off they were all most enthusiastic about the machine, and some even said, *"It seems t a film for my country alone".*

Bruce E. Sturm, Director of Advertising & Promotion, Jantzen, Inc.

Jantzen's Film Proved to Be "Most Flexible of All Media"

Our film *Once Upon A Smile* was o several media used during our 19 season to launch an entirely new perso for a 50-year old company. We had a ne vertising agency (Hockaday Associates new line of merchandise and a new adv ing campaign.

The film was used to introduce this look in the broadest way. The visuals c film were used at point of sale; the sound was re-used in store promotions, in sales training programs and for sheet

The film itself was employed at sales ings, press and buyers shows and in show all over the world . . . in store audito and windows as well as women's clubs — because it was entertaining (and a film be entertaining if it is to compete with forms of recreation and entertainment) second, because it recapitulates our fifty of business while presenting the composit new image for our company.

As a result of this first five-minute which was produced for us by Elektra of New York, *film has become a cont part of our advertising.* Invariably, we found film to be one of the most media, and since we seldom repeat o vertising and merchandising approach, preciate its adaptability to the proble objectives at hand.

George Mosley, Vice-Pres., Advertising, Jos. E. Seagram & Sons.

'e, The Salesmen" Makes nverts of Seagram's Men

AGRAM HAS SOME 4,000 distributor salesnen representing 300 distributing houses coast to coast.

a business rampant with deals, partily on "secondary" brands — "off-brands" "private labels" — these men are under ic competitive price pressures and subject eat discouragements in trying to successlly transmit to the retail trade the Seagram eting philosophy that advertising and proon are "the build a market" method and deal" is "the wreck a market" method.

We Develop Programs to Fortify Men

ich year, for presentation at our annual meetings, we go to a great length to op a program which will fortify our men ast these conditions.

e spend a substantial amount of our proon budget to show and merchandise our coming advertising and sales promotion to produce in important visual form — ir by motion picture and/or other dramatic l techniques — a keynote presentation h will provide the methods and incentives eby a man may become a better salesman. e subject which we approach may be rnial: it is, after all, the subject of the d taker versus the merchandiser . . . but oncept by which we approach it is always

The *Salesman* Is One Who *Sells*

his year, in the film represented here to-y *We, The Salesmen*, the concept was to ver the point of view that: "Deal or no — a salesman is *one who sells*".

achieve this point of view — and *to pro-* the wherewithal for the salesman to ilitate" himself to that extent, we went to reatest Source of all . . . which, if I were ke it out of context now and describe it, t be misunderstood. After all, *we found cessary to use motion picture and its great nunicative potential*, to become "underod". Suffice it to say, by way of description, *a man in possession and control of what film teaches can cope with every exigency e.*

hat is a bold statement, you say. Well, the ept of having the Greatest Teacher of all to the salesman about his day to day job was a bold concept. It presented a great challenge to the "writer", which in this case was our advertising agency; Warwick & Legler. They produced a dynamic script. Dynamic and at the same time delicate — in that it gave the producer, Robert Klaeger, a delicate problem in translating its dynamics to the screen and staying in good taste. The producer did a masterful job.

I have been asked to say something about the film's success. Well, alcoholic beverage salesmen are a fairly cynical audience. They have asked to see it again and again. Some of them, on learning it was to be shown in a neighboring city again, have driven over 100 miles to get there. We have 20 prints circulating now made necessary by requests from other companies — organizations — clubs, etc. and the requests are still piling up.

Jack L. Siegel, Manager, Film and Television News Activities, International Business Machines.

I B M Wins "High Praise" With "The Question Tree"

UNLIKE MOST OF THE FILMS produced by our Divisions — which are primarily product oriented — *our Corporate Film and TV Program is directed more towards the so-called big picture* . . . the across-the-board activities and interests of IBM. I know this is also the case with most other large decentralized business organizations.

Again, like most other companies — although this may surprise some producers — *we actually have a long list of films that we'd like to produce*. The problem arises in obtaining the money to do these films — as well as the thousand-and-one others that are proposed to us by producers every year.

Shareholders Met at New Research Lab

Last year our Annual Stockholder's Meeting was to be held at Yorktown in Westchester County . . . it was to be tied in with the dedication of our new Thomas J. Watson Research Lab. What better opportunity to tell the stockholders more about our research activities?

We thought the matter over and turned down possible closed-circuit TV productions in favor of a 35*mm color film that could give the viewer an idea of some of the projects that our research scientists were involved in* . . . . a film that would impress the stockholders with our interest in research, and that would also do the same and even more for the general public.

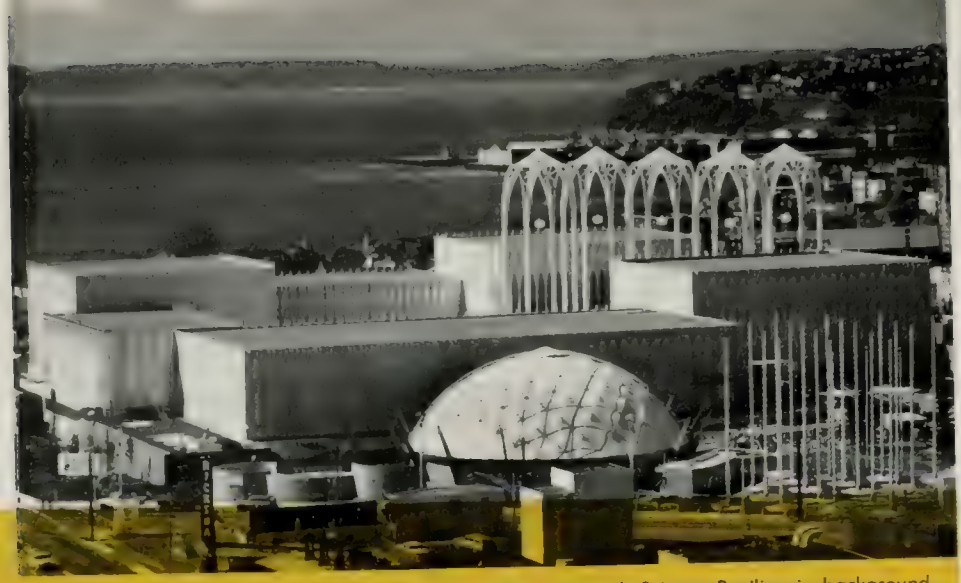
While IBM has an enviable reputation in the field of electronic computers and office equipment, *not too much is known of our research program*. We wanted to let everyone know that we were deeply involved in basic research in addition to product research in data processing. Money was put up by our Stockholder Relations Department, our Research and Engineering organization, and the Department of Communications. Between the three, we had enough funds for a 35mm color production, and we called in Henry Strauss & Company.

Only Fourteen Weeks to Meet Deadline

We only had three and a half months from beginning to end, but Hank managed to meet the deadline. We decided to go for a temporary version with stock music for the Annual Meeting and follow up with an original score shortly thereafter. *We wanted as wide an audience as possible*, with theatrical release to be followed by TV.

In order to get wide acceptance we couldn't just talk about IBM research and what we were doing in this area . . . . this would do for the stockholder's meeting but not for later distribution. *We decided to tell the broad story behind research* . . . how it is carried on and why.

We chose as our theme, the *Question Tree* . . . how does one determine what questions are waiting to be answered?. . . and how does one know when a question is ready to be answered? We took as our central character a young boy walking along the beach . . . . he's full of questions . . . and he learns.



Limit Circulation While Plans Mature

The full film runs twelve minutes forty seconds. *More than* 4,500 *people saw it at the* 1961 IBM annual shareholders meeting, and the film received high praise. We are now negotiating a theatrical release. We allowed limited circulation these past few months — members of the IBM field force have been encouraged to take prints and show them to local organizations, and so forth.

Approximately 18,000 *people have seen the film since April* . . . . the groups include many of our major customers, as well as schools and colleges. Comments and "feed-back" have been universally good, and we're pleased that once again Hank Strauss has delivered the goods for us.

"The long journey of the human race, driven by the restless passion to explore . . ." Scene is from IBM's picture, "The Question Tree."
